

Hoe u ProcMon-logbestanden verzamelt om AMP-problemen bij opstarten van de oplossing op te lossen

Inhoud

[Inleiding](#)

[Procedure: Initiatief](#)

Inleiding

Als systeembeheerder kunt u gedetailleerde logbestanden verkrijgen met behulp van de Procesmonitor (procmon.exe) om te bepalen, als er tijdens het opstarten van de computer een ervaring met de FireAMP-connector is. Deze logbestanden worden ook door Cisco TAC gevraagd om dergelijke problemen op te lossen. Procesmonitor is een gratis hulpprogramma dat ons hier kan helpen. Dit kan gratis gedownload worden op <https://docs.microsoft.com/en-us/sysinternals/downloads/procmon>

Dit document beschrijft de stappen op het verzamelen van ProcMon-logbestanden en het dumpen van het geheugen als het probleem zich voordoet tijdens een proces van systeemopstarten (wat betekent dat er BSOD's worden gegenereerd vanaf de start). Deze logbestanden zijn vereist om de systeemgebeurtenissen weer te geven die zich tijdens de start voordoen.

Procedure: Initiatief

1. Stel de testmachines zodanig in dat het probleem gemakkelijk kan worden gereproduceerd.
2. Download en voer het ProcMon-gereedschap als beheerder uit. Ga naar **bestand -> Bestanden verwerken** en selecteer een **pad**.

The screenshot shows the Windows Process Monitor application. The main window displays a list of system events with columns for Time, Process Name, PID, Operation, Path, Result, and Detail. A dialog box titled 'Process Monitor Backing Files' is open in the foreground. This dialog box contains a table of backing files and options for where to store event data.

Name	Event Count	Event Bytes	Pending Events	Process Count	Dictionary Count	Item Count	Committed
C:\Users\win7M4-new\Desktop\procomon_output\test1.pml	106,123	40,861,138	5	50	1,954	19	file

Process Monitor can store events in virtual memory (limited by the system current limit), or in a file you specify (limited by free disk space). Which do you prefer?

Use virtual memory (5,702MB available)
 Use file name(s): C:\Users\win7M4-new\Desktop\procomon_output\test1.pml

Procomon load: 0.40% @ pid 0 (0 bytes pending)

3. Ga in Aansluitgereedschap naar **Opties** -> **Opstarten inschakelen**.

Process Monitor - C:\Users\win764-new\Desktop\procomon_output\test1.pml

4. Selecteer gebeurtenissen voor profiling van bedreigingen en elke seconde genereren.

7. Als u optioneel kunt starten in "normale modus" als de PMB-bestanden zijn gegenereerd in de C:\Windows folder, dan worden de volgende logbestanden weergegeven als u ProcMon opnieuw start. U kunt de gebeurtenissen vanaf deze pagina opnieuw opslaan door op de knop Opslaan te klikken.
