[Inleiding](#)

Dit document biedt een voorbeeldconfiguratie voor de inspectie van inkomende Simple Mail Transfer Protocol (MTP) of uitgebreide Simple Mail Transfer Protocol (ESMTP)-verbindingen met Cisco IOS® Firewall in Cisco IOS. Een dergelijke inspectie is vergelijkbaar met de MailGuard optie in Cisco PIX 500 Series security applicaties.

[Voorwaarden](#)

[Vereisten](#)

Er zijn geen specifieke vereisten van toepassing op dit document.

[Gebruikte componenten](#)

De informatie in dit document is gebaseerd op de volgende software- en hardware-versies:

- Cisco IOS-softwarerelease 12.3(4)T of hoger
- Cisco 3640 router

De informatie in dit document is gebaseerd op de apparaten in een specifieke laboratoriumomgeving. Alle apparaten die in dit document worden beschreven, hadden een opgeschoonde (standaard)configuratie. Als uw netwerk live is, moet u de potentiële impact van elke opdracht begrijpen.

Conventies

Raadpleeg de [Cisco Technical Tips Convention](#) voor meer informatie over documentconventies.

Achtergrondinformatie

MTP-inspectie zorgt ervoor dat de opdrachten voor MTP worden geïnspecteerd op illegale opdrachten. Packets met illegale opdrachten worden aangepast aan een patroon van "xxxx" en naar de server verzonden. Dit proces veroorzaakt dat de server een negatief antwoord stuurt, wat de client dwingt om een geldige opdracht uit te geven. Een illegaal bevel in het midden van MTP is elke opdracht behalve deze opdrachten:

• GEGEVENS	• RCPT
• HELO	• RET
• HELPEN	• SAML
• MAIL	• VERZENDEN
• OPNIEUW	• SOML
• KWAAD	• VRFY

ESMTP-inspectie werkt op dezelfde wijze als bij de MTP-inspectie. Packets met illegale opdrachten worden aangepast aan een "xxxx"-patroon en naar de server verzonden, wat een negatief antwoord oplevert. Een illegale ESMTP-opdracht is een opdracht behalve deze opdrachten:

• AUTO	• OPNIEUW
• GEGEVENS	• KWAAD
• EHLO	• RCPT
• ETRN	• RET
• HELO	• SAML
• HELPEN	• VERZENDEN
• HELPPEN	• SOML
• MAIL	• VRFY

ESMTP-inspectie onderzoekt deze uitbreidingen ook via diepere commando-inspectie:

- Verklaring van berichtgrootte (GROOTTE)
- Afstandsverklaring van wachtrij (ETRN)
- Binaire MIME (BINARYMIME)
- Opdracht
- Verificatie
- Delivery Status Kennisgeving (DSN)
- Uitgebreide statuscode (ENHANCEDSTATUSCODE)
- 8-bits MIME-transport (8-bits MIME)

OPMERKING: MTP- en ESMTP-inspectie kunnen niet tegelijkertijd worden ingesteld. Een poging om beide resultaten in een foutmelding te configureren.

N.B.: In Cisco IOS-softwarerelease 12.3(4)T en hoger maakt Cisco IOS-firewall niet langer dynamische toegang-lijstitems om verkeer toe te staan. Cisco IOS Firewall behoudt nu een sessiestabel om de beveiliging van geïnspecteerde verbindingen te controleren.

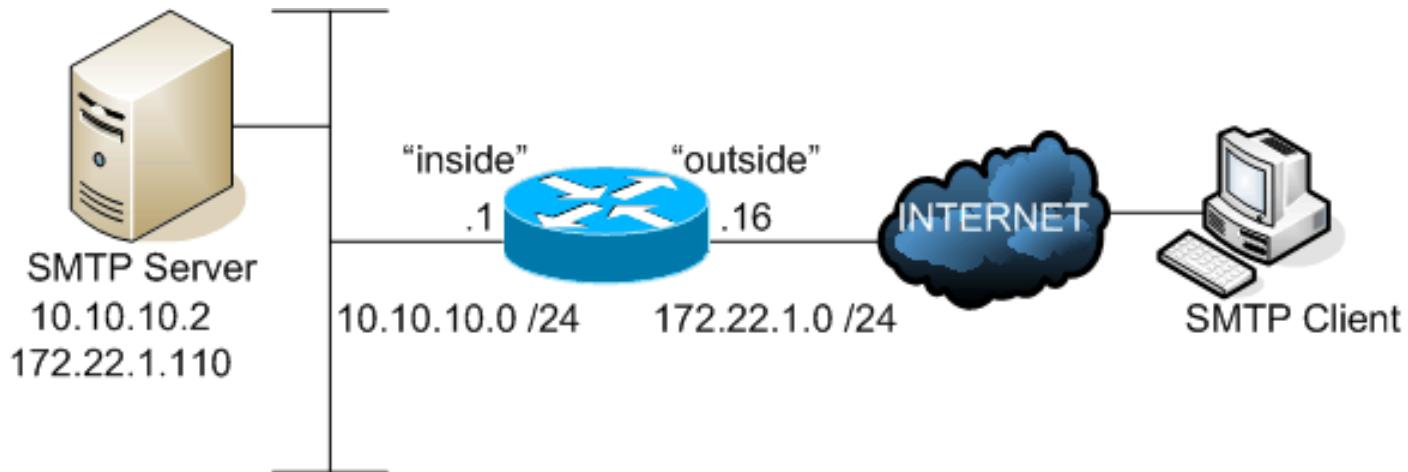

Configureren

Deze sectie bevat informatie over het configureren van de functies die in dit document worden beschreven.

Opmerking: Gebruik het [Opname Gereedschap](#) (alleen geregistreerde klanten) om meer informatie te verkrijgen over de opdrachten die in deze sectie worden gebruikt.

Netwerdiagram

Het netwerk in dit document is als volgt opgebouwd:

Configuraties

Dit document gebruikt deze configuratie:
