Basisconfiguratie voor FDM

# Inleiding

Dit document beschrijft de implementatie van Cisco Secure Firewall Threat Defence Virtual (FDM) op een virtuele machine met behulp van Azure Marketplace en sjablonen.

## Voorwaarden

## Vereisten

Cisco raadt kennis van de volgende onderwerpen aan:

- Cisco Secure Firewall Management Center (FMC)
- Cisco Secure Firewall Threat Defence (FTD)
- Azure-account/toegang

## Gebruikte componenten

De informatie in dit document is gebaseerd op de volgende softwareversies:

- Virtuele versies van Cisco Secure Firewall Threat Defense: 7.4.1, 7.3.1, 7.2.7, 7.1.0, 7.0.6 en 6.4.0

De informatie in dit document is gebaseerd op de apparaten in een specifieke laboratoriumomgeving. Alle apparaten die in dit document worden beschreven, hadden een opgeschoonde (standaard)configuratie. Als uw netwerk live is, moet u zorgen dat u de potentiële impact van elke opdracht begrijpt.

## Configureren

Klanten hebben problemen ondervonden bij het inzetten van een Firepower Device Manager (FDM) op een virtuele machine van Azure, met name bij het gebruik van de Azure Marketplace en sjablonen.

## FDM implementeren van Sjabloon op Azure Portal

Gebruik deze procedure om de FDM vanaf het Azure-portal te implementeren:

1. Ga naar het Azure-portal en zoek de Marketplace binnen Azure Services. Zoek naar en selecteer Cisco Secure Firewall Threat Defence Virtual - BYOL en PAYG.

$\equiv$ Microsoft Azure			, <i>P</i> Sear	ch resources, services, and docs (G+/)		Copilot
