Hoe stel ik handmatige DNS-items op het web security applicatie in?

Inhoud

vraag

Hoe stel ik handmatige DNS-angen in op de Cisco web security applicatie?

Omgeving

Cisco web security applicatie (WSA), alle AsyncOS-versies

Voer in de opdrachtregel interface (CLI) de volgende opdrachten in zoals wordt aangegeven:

```
WSA> dnsconfig

Choose the operation you want to perform:
- NEW - Add a new server.
- SETUP - Configure general settings.
- SEARCH - Configure DNS domain search list.
[]> localhosts

Local IP to Host mappings:

Choose the operation you want to perform:
- NEW - Add new local IP to host mapping.
- DELETE - Delete an existing mapping.
[]> new

Enter the IP address of the host you are adding.
[]> 1.1.1.1

Enter the canonical host name and any additional aliases (separate values with spaces)
[]> example.com

Local IP to Host mappings:
1. 1.1.1.1 example.com

Choose the operation you want to perform:
- NEW - Add new local IP to host mapping.
- DELETE - Delete an existing mapping.
[]>
```

Gebruik de CLI-opdracht - **toegewijd** - om de DNS-configuratiewijzigingen in te voeren in de CLI-

prompt.

Opmerking: De *"localhosts"* optie in de CLI opdracht 'dnsfig' is een verborgen optie.
