## Introduction

Este documento descreve como redistribuir rotas do protocolo BGP no processo Open Shortest Path First (OSPF).

## Prerequisites

### Requirements

A Cisco recomenda que você tenha conhecimento da configuração básica do BGP e compreenda os protocolos de roteamento de:

- BGP
- OSPF
- Protocolo de Roteamento IGRP Melhorado (EIGRP)
- Routing Information Protocol (RIP)

Para obter mais informações, consulte [Estudos de Caso BGP](#) e [Configuração do BGP](#).

## Componentes Utilizados

As informações neste documento são baseadas no software Cisco IOS® versão 15.1(4)M5.

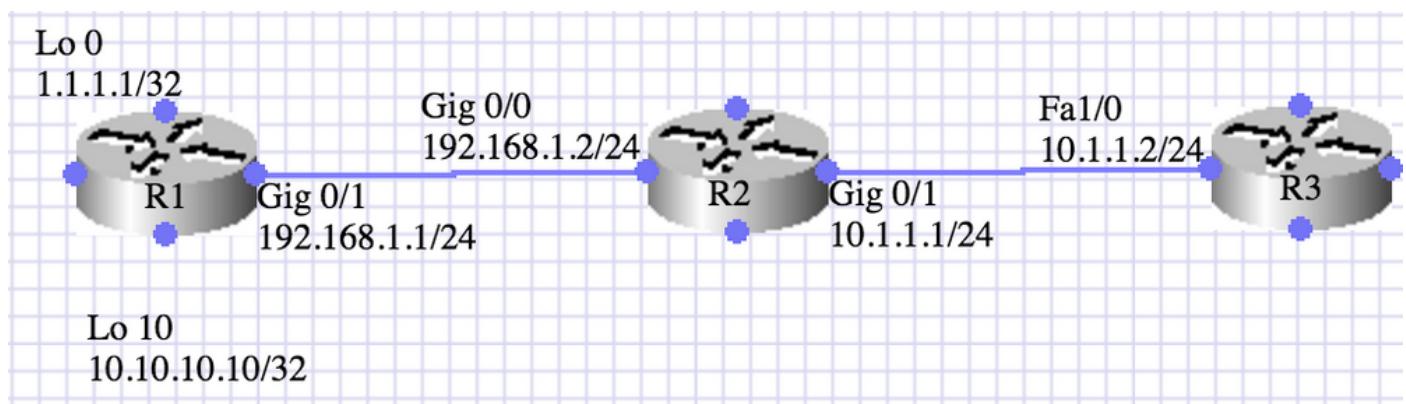

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. Se a rede estiver ativa, certifique-se de que você entenda o impacto potencial de qualquer comando.

## Informações de Apoio

Como em outro IGP (Interior Gateway Protocol) para redistribuição de IGP, o comportamento é diferente quando o BGP (IBGP) interno é redistribuído no OSPF. As rotas aprendidas de IBGP não são encaminhadas para um protocolo de roteamento IGP através do comando redistribute. Use o comando [bgp redistribute-internal](#) no processo BGP no roteador que redistribui.

## Configurar

### Diagrama de Rede

### Configurar o OSPF entre R2 e R3

No cenário descrito aqui, os roteadores R1 e R2 executam o IBGP e os roteadores R2 ou R3 executam a área 0 do OSPF. O R1 anuncia duas rotas (1.1.1.1 /32 e 10.10.10.10/32) através do comando network.

R2 redistribui o BGP na área 0 do OSPF. É necessário redistribuir as rotas internas selecionadas (10.10.10.10/32).

A tarefa é realizada com o uso de lista de prefixos e mapa de rotas.

R1:

```
interface Loopback0
ip address 1.1.1.1 255.255.255.255
!
interface Loopback10
ip address 10.10.10.10 255.255.255.255
!
interface GigabitEthernet0/1
ip address 192.168.1.1 255.255.255.0

* 192.168.1.1, from 192.168.1.1, 00:04:56 ago
Route metric is 0, traffic share count is 1
AS Hops 0
MPLS label: none

```

### R3:

```

interface FastEthernet1/0
ip address 10.1.1.2 255.255.255.0
duplex auto
speed auto

router ospf 1
log-adjacency-changes
network 10.1.1.2 0.0.0.0 area 0

R3#show ip ospf neighbor
Neighbor ID Pri State Dead Time Address Interface
192.168.1.2 1 FULL/DR 00:00:36 10.1.1.1 GigabitEthernet0/1

```

A tabela de roteamento em R3 antes da redistribuição do BGP - internal é adicionada em R2 no roteador BGP 10:

```

R3#show ip route
Codes: L - local, C - connected, S - static, R - RIP, M - mobile, B - BGP
D - EIGRP, EX - EIGRP external, O - OSPF, IA - OSPF inter area

```

```

N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
E1 - OSPF external type 1, E2 - OSPF external type 2
i - IS-IS, su - IS-IS summary, L1 - IS-IS level-1, L2 - IS-IS level-2
ia - IS-IS inter area, * - candidate default, U - per-user static route
o - ODR, P - periodic downloaded static route, H - NHRP, l - LISP
+ - replicated route, % - next hop override
Gateway of last resort is not set
3.0.0.0/32 is subnetted, 1 subnets
C 3.3.3.3 is directly connected, Loopback0
10.0.0.0/8 is variably subnetted, 2 subnets, 2 masks
C 10.1.1.0/24 is directly connected, GigabitEthernet0/1
L 10.1.1.2/32 is directly connected, GigabitEthernet0/1

```

## R2:

```

router bgp 10
bgp redistribute-internal

```

## Verificar

## R3:

A tabela de roteamento para R3 após a redistribuição do BGP - internal é adicionada em R2 no roteador BGP 10:

```

R3#show ip route
Codes: L - local, C - connected, S - static, R - RIP, M - mobile, B - BGP
D - EIGRP, EX - EIGRP external, O - OSPF, IA - OSPF inter area
N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
E1 - OSPF external type 1, E2 - OSPF external type 2
i - IS-IS, su - IS-IS summary, L1 - IS-IS level-1, L2 - IS-IS level-2
ia - IS-IS inter area, * - candidate default, U - per-user static route
o - ODR, P - periodic downloaded static route, H - NHRP, l - LISP
+ - replicated route, % - next hop override
Gateway of last resort is not set
3.0.0.0/32 is subnetted, 1 subnets
C 3.3.3.3 is directly connected, Loopback0
10.0.0.0/8 is variably subnetted, 3 subnets, 2 masks
C 10.1.1.0/24 is directly connected, GigabitEthernet0/1
L 10.1.1.2/32 is directly connected, GigabitEthernet0/1
o E1 10.10.10.10/32 [110/11] via 10.1.1.1, 00:00:06, GigabitEthernet0/1

```

## Configurar o EIGRP entre R2 e R3:

No cenário descrito aqui, os roteadores R1 e R2 executam o IBGP e os roteadores R2 ou R3 executam o EIGRP Autonomous System (AS) 1. O R1 anuncia duas rotas (1.1.1.1 /32 e 10.10.10.10/32) através do comando network.

R2 redistribui o BGP no EIGRP AS 1. É necessário redistribuir as rotas internas selecionadas (10.10.10.10/32).

A tarefa é realizada com o uso de lista de prefixos e mapa de rotas.

## R2:

```

router eigrp 1

```

```
network 10.0.0.0
redistribute bgp 10 metric 1544 10 255 1 1500 route-map BGP_To_EIGRP
eigrp router-id 2.2.2.2
```

```
route-map BGP_To_EIGRP, permit, sequence 10
Match clauses:
ip address prefix-lists: BGP-to-eigrp
Set clauses:
Policy routing matches: 0 packets, 0 bytes
```

```
ip prefix-list BGP-to-eigrp: 1 entries
seq 1 permit 10.10.10.10/32
```

**R3:**

```
router eigrp 1
network 10.0.0.0
eigrp router-id 3.3.3.3
```

A saída do comando show IP route em R3 antes da redistribuição do BGP - internal é adicionada em R2 no roteador BGP 10:

```
R3#show ip route
Codes: L - local, C - connected, S - static, R - RIP, M - mobile, B - BGP
D - EIGRP, EX - EIGRP external, O - OSPF, IA - OSPF inter area
N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
E1 - OSPF external type 1, E2 - OSPF external type 2
i - IS-IS, su - IS-IS summary, L1 - IS-IS level-1, L2 - IS-IS level-2
ia - IS-IS inter area, * - candidate default, U - per-user static route
o - ODR, P - periodic downloaded static route, H - NHRP, l - LISP
+ - replicated route, % - next hop override
Gateway of last resort is not set
3.0.0.0/32 is subnetted, 1 subnets
C 3.3.3.3 is directly connected, Loopback0
10.0.0.0/8 is variably subnetted, 2 subnets, 2 masks
C 10.1.1.0/24 is directly connected, GigabitEthernet0/1
L 10.1.1.2/32 is directly connected, GigabitEthernet0/1
```

**R2:**

```
router bgp 10
bgp redistribute-internal
```

## Verificar

A saída do comando show IP route em R3 após o BGP redistribute-internal é adicionada em R2 no roteador BGP 10:

```
R3#show ip route
Codes: L - local, C - connected, S - static, R - RIP, M - mobile, B - BGP
D - EIGRP, EX - EIGRP external, O - OSPF, IA - OSPF inter area
N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
E1 - OSPF external type 1, E2 - OSPF external type 2
i - IS-IS, su - IS-IS summary, L1 - IS-IS level-1, L2 - IS-IS level-2
ia - IS-IS inter area, * - candidate default, U - per-user static route
o - ODR, P - periodic downloaded static route, H - NHRP, l - LISP
```

```

+ - replicated route, % - next hop override
Gateway of last resort is not set
3.0.0.0/32 is subnetted, 1 subnets
C 3.3.3.3 is directly connected, Loopback0
10.0.0.0/8 is variably subnetted, 3 subnets, 2 masks
C 10.1.1.0/24 is directly connected, GigabitEthernet0/1
L 10.1.1.2/32 is directly connected, GigabitEthernet0/1
D EX 10.10.10.10/32
[170/1660672] via 10.1.1.1, 00:00:04, GigabitEthernet0/1

```

## Configurar o RIP entre R2 e R3:

No cenário descrito aqui, os roteadores R1 e R2 executam o IBGP e os roteadores R2 ou R3 executam o RIPv2.

O R1 anuncia duas rotas (1.1.1.1 /32 e 10.10.10.10/32) através do comando network. R2 redistribui o BGP em RIPv2. É necessário redistribuir as rotas internas selecionadas (10.10.10.10/32).

A tarefa é realizada com o uso de lista de prefixos e mapa de rotas.

R2:

```

router rip
version 2
redistribute bgp 10 metric 1 route-map BGP_To_RIP
network 10.0.0.0
no auto-summary

route-map BGP_To_RIP, permit, sequence 10
Match clauses:
ip address prefix-lists: BGP-to-rip
Set clauses:
Policy routing matches: 0 packets, 0 bytes

ip prefix-list BGP-to-rip: 1 entries
seq 1 permit 10.10.10.10/32

```

R3:

```

router rip
version 2
network 10.0.0.0
no auto-summary

```

Saída em R3 antes de ativar o bgp redistribute-internal em R2 no roteador bgp 10:

```

R3#show ip route
Codes: L - local, C - connected, S - static, R - RIP, M - mobile, B - BGP
D - EIGRP, EX - EIGRP external, O - OSPF, IA - OSPF inter area
N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
E1 - OSPF external type 1, E2 - OSPF external type 2
i - IS-IS, su - IS-IS summary, L1 - IS-IS level-1, L2 - IS-IS level-2
ia - IS-IS inter area, * - candidate default, U - per-user static route
o - ODR, P - periodic downloaded static route, H - NHRP, l - LISP
+ - replicated route, % - next hop override
Gateway of last resort is not set
3.0.0.0/32 is subnetted, 1 subnets

```

```
C 3.3.3.3 is directly connected, Loopback0
10.0.0.0/8 is variably subnetted, 2 subnets, 2 masks
C 10.1.1.0/24 is directly connected, GigabitEthernet0/1
L 10.1.1.2/32 is directly connected, GigabitEthernet0/1
```

## R2:

```
router bgp 10
bgp redistribute-internal
```

### Verificar

Saída em R3 depois de habilitar a redistribuição BGP - interno em R2 no roteador BGP 10:

```
R3#sh ip route
Codes: L - local, C - connected, S - static, R - RIP, M - mobile, B - BGP
D - EIGRP, EX - EIGRP external, O - OSPF, IA - OSPF inter area
N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
E1 - OSPF external type 1, E2 - OSPF external type 2
i - IS-IS, su - IS-IS summary, L1 - IS-IS level-1, L2 - IS-IS level-2
ia - IS-IS inter area, * - candidate default, U - per-user static route
o - ODR, P - periodic downloaded static route, H - NHRP, l - LISP
+ - replicated route, % - next hop override
Gateway of last resort is not set
3.0.0.0/32 is subnetted, 1 subnets
C 3.3.3.3 is directly connected, Loopback0
10.0.0.0/8 is variably subnetted, 3 subnets, 2 masks
C 10.1.1.0/24 is directly connected, GigabitEthernet0/1
L 10.1.1.2/32 is directly connected, GigabitEthernet0/1
R 10.10.10.10/32 [120/1] via 10.1.1.1, 00:00:09, GigabitEthernet0/1
```

## Troubleshoot

Atualmente, não há informações específicas de solução de problemas disponíveis para esta configuração.
