## Introduction

Este documento descreve como recuperar as senhas `enable password` e `enable secret` para o Cisco Router 2900.

## Prerequisites

### Requirements

Não existem requisitos específicos para este documento.

### Componentes Utilizados

As informações neste documento são baseadas nas seguintes versões de hardware:

- Roteador de serviços integrados (ISR) Cisco 2900 Series

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. Se a rede estiver ativa, certifique-se de que você entenda o impacto potencial de qualquer comando.

### Produtos Relacionados

Consulte [Procedimentos de Recuperação de Senhas para obter informações sobre como recuperar senhas para os produtos relacionados](#).

### Conventions

Consulte as Convenções de Dicas Técnicas da Cisco para obter mais informações sobre convenções de documentos.

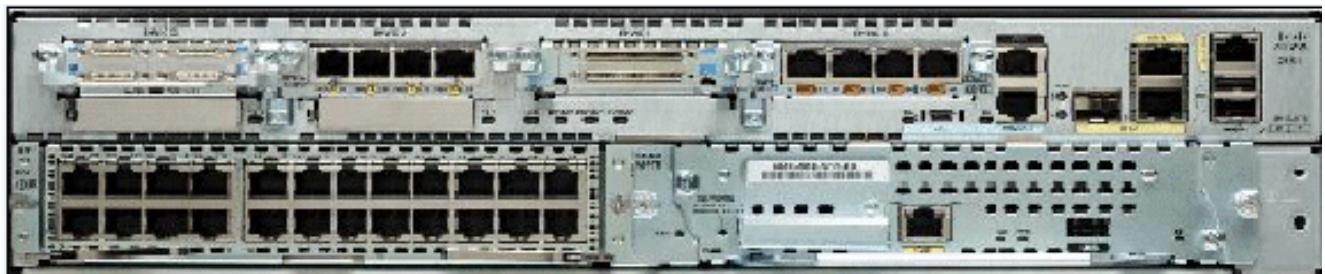

# Informações de Apoio

Este documento descreve como recuperar as senhas **enable password** e **enable secret**. Essas senhas protegem o acesso aos modos EXEC privilegiado e de configuração. A senha **enable password** pode ser recuperada, mas a senha **enable secret** é criptografada e deve ser substituída por uma nova senha. Utilize o procedimento descrito neste documento para substituir a senha **enable secret**.

## Procedimento Passo a Passo

Para recuperar sua senha:

1. Desative ou desligue o roteador.
2. Remova o Compact Flash que está na parte traseira do roteador. Essa imagem mostra a parte traseira do roteador 2951:

*Parte traseira do roteador 2951* Para obter mais informações, consulte [Visão Geral dos Roteadores](#).

3. Switch no roteador.
4. Quando o roteador estiver no modo Rommon, insira novamente o Compact Flash.
5. Digite confreg 0x2142 no prompt rommon 1> para inicializar da Flash. Este passo ignora a configuração de inicialização onde as senhas são armazenadas.
6. Digite **reset** no prompt rommon 2>. O roteador é reinicializado, mas ignora a configuração salva.
7. Digite **no** após cada pergunta de instalação ou pressione Ctrl-C para pular o procedimento de configuração inicial.
8. Digite **enable** no prompt Router>. Você está no modo enable e vê o prompt Router# .
9. Digite **configure memory** ou **copy startup-config running-config** para copiar a RAM não volátil (NVRAM) para a memória. Aviso: Não digite **copy running-config startup-config** ou **write**. Esses comandos apagam sua configuração de inicialização.
10. Execute o comando **show running-config**. O comando **show running-config** exibe a configuração do roteador. Nesta configuração, o comando **shutdown** é mostrado em todas as interfaces, o que indica que todas as configurações estão desativadas no momento. Além disso, as senhas (ativar senha, ativar segredo, vty e as senhas do console) estão em um formato criptografado ou não criptografado. Você pode reutilizar senhas não criptografadas. No entanto, as senhas criptografadas devem ser alteradas para um novo valor.
11. Digite **configure terminal**. O prompt `hostname(config)#` é exibido.
12. Digite **enable secret <password>** para alterar a senha **enable secret**. Por exemplo:  
`hostname(config)#enable secret cisco`
13. Execute o comando **no shutdown** em cada interface usada. Se você emitir um comando

- show ip interface brief**, todas as interfaces que deseja usar serão exibidas *up up* .
14. Digite config-register <configuration\_register\_setting>. Onde  
**<configuration\_register\_setting>** é o valor que você registrou na etapa 2 ou **0x2102** . Por exemplo:
- ```
hostname(config)#config-register 0x2102
```
15. Pressione **Ctrl-z** ou **end** para sair do modo de configuração.O prompt `hostname#` é exibido.
16. Tipo **write memory** or **copy running-config startup-config** para confirmar as alterações.

## Exemplo de procedimento de recuperação de senha

Esta seção fornece um exemplo do procedimento de recuperação de senhas. Este exemplo foi criado com um ISR Cisco 2900 Series. Mesmo que você não use um Cisco 2900 Series ISR, essa saída fornece um exemplo do que você deve experimentar em seu produto.
