[Informações Relacionadas](#)

[Introduction](#)

Este exemplo de configuração demonstra como conectar um VPN Client a um PIX Firewall usando curingas, mode-config, o comando **sysopt connection permit-ipsec** e autenticação estendida (Xauth).

Para ver a configuração TACACS+ e RADIUS para PIX 6.3 e posterior, consulte [TACACS+ e RADIUS para PIX 6.3 e PIX/ASA 7.x Configuration Example](#).

O VPN Client suporta AES (Advanced Encryption Standard) como um algoritmo de criptografia no Cisco VPN Client versão 3.6.1 e posterior e com PIX Firewall 6.3. O VPN Client suporta tamanhos chave de 128 bits e 256 bits apenas. Para obter mais informações sobre como configurar AES, consulte [Como configurar o Cisco VPN Client para PIX com AES](#).

Consulte [Exemplo de Configuração de Autenticação do PIX/ASA 7.x e do Cisco VPN Client 4.x para Windows com o Microsoft Windows 2003 IAS RADIUS](#) para configurar a conexão VPN de acesso remoto entre um Cisco VPN Client (4.x para Windows) e o PIX 500 Series Security Appliance 7.x usando um Microsoft Windows 2003 Internet Authentication Service (IAS) Servidor RADIUS.

Consulte [IPsec Between a VPN 3000 Concentrator and a VPN Client 4.x for Windows using RADIUS for User Authentication and Accounting Configuration Example](#) para estabelecer um túnel IPsec entre um Cisco VPN 3000 Concentrator e um Cisco VPN Client 4.x for Windows usando RADIUS para autenticação e tarifação do usuário.

Consulte [Configurando o IPsec entre um Cisco IOS Router e um Cisco VPN Client 4.x para Windows usando RADIUS para autenticação de usuário](#) para configurar uma conexão entre um roteador e o Cisco VPN Client 4.x usando RADIUS para autenticação de usuário.

Prerequisites

Requirements

Não existem requisitos específicos para este documento.

Componentes Utilizados

As informações neste documento são baseadas nestas versões de software e hardware:

- Cisco VPN Client 4.x Esse produto possui recursos de VPN avançados, diferente do Cisco Secure VPN Client 1.x.
- PIX Firewall 515E versão 6.3(3).

Observação: a tecnologia de criptografia está sujeita a controles de exportação. É sua responsabilidade conhecer a lei sobre exportação de tecnologia de criptografia. Para obter mais informações, consulte o [site da Administração de Exportação](#) . Se você tem alguma dúvida com relação ao controle de exportação, envie um e-mail para export@cisco.com.

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

Conventions

Consulte as [Convenções de Dicas Técnicas da Cisco para obter mais informações sobre convenções de documentos](#).

Informações de Apoio

O comando **sysopt connection permit-ipsec** permite implicitamente que qualquer pacote proveniente de um túnel IPsec ignore a verificação de uma **lista de acesso** associada, **conduit** ou **grupo de acesso** para conexões IPsec. Xauth autentica o usuário IPsec em um servidor TACACS+ ou RADIUS externo. Além da chave pré-compartilhada curinga, o usuário deve fornecer um nome de usuário/senha.

Um usuário com um cliente VPN recebe um endereço IP de seu ISP. Isso é substituído por um endereço IP do pool de endereços IP no PIX. O usuário tem acesso a tudo o que está dentro do firewall, incluindo as redes. Os usuários que não executam o VPN Client podem se conectar somente ao servidor Web usando o endereço externo fornecido pela atribuição estática.

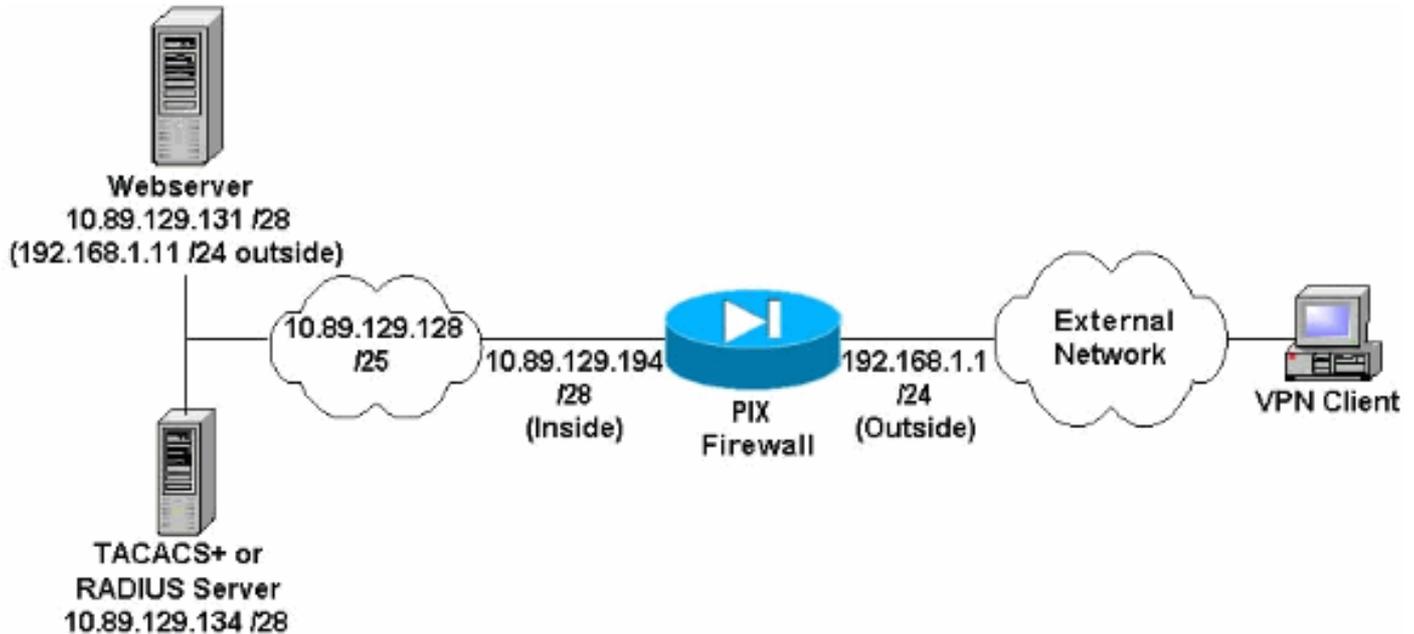

Configurar

Nesta seção, você encontrará informações para configurar os recursos descritos neste documento.

Nota: Use a Command Lookup Tool (somente clientes registrados) para obter mais informações sobre os comandos usados neste documento.

Diagrama de Rede

Este documento utiliza a seguinte configuração de rede:

Notas de Diagrama de Rede

- Os hosts da Internet que acessam o servidor Web usando o endereço IP global 192.168.1.1 são autenticados mesmo que uma conexão VPN não esteja estabelecida. Este tráfego *não* está criptografado.
- Os VPN Clients podem acessar todos os hosts na rede interna (10.89.129.128 /25) assim que o túnel IPsec for estabelecido. Todo o tráfego do VPN Client para o PIX Firewall é criptografado. Sem um túnel IPsec, eles só podem acessar o servidor Web por meio de seu endereço IP global, mas ainda são necessários para autenticar.
- Os clientes de VPN surgem da Internet e seus endereços de IP não são conhecidos com antecedência.

Configurações

Este documento utiliza estas configurações.

Configuração do VPN Client 4.0.5

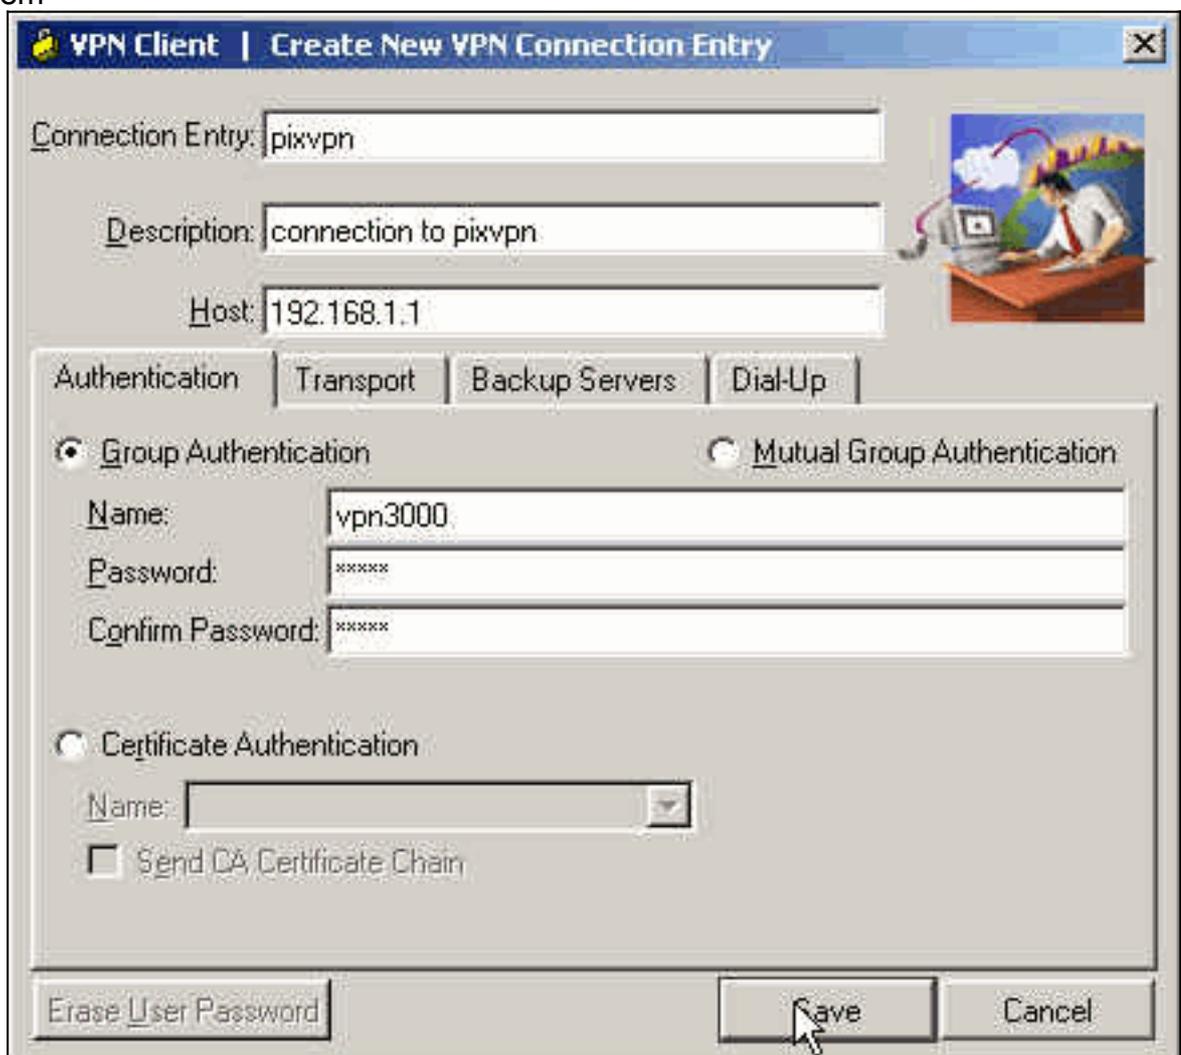

Conclua estes passos para configurar o VPN Client 4.0.5.

1. Selecione **Iniciar > Programas > Cisco Systems VPN Client > VPN Client**.
2. Clique em **New** para iniciar a janela Create New VPN Connection

Entry.

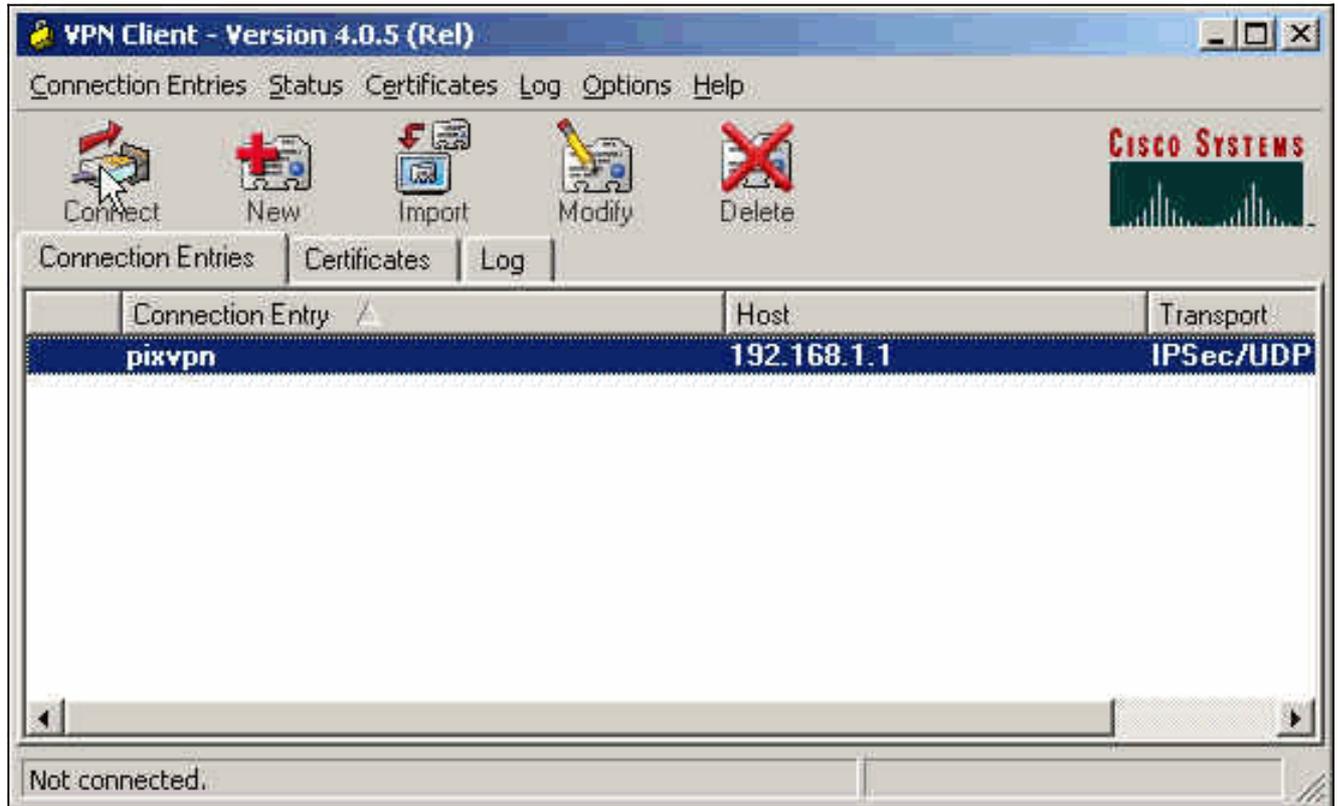

3. Insira o nome da entrada do Connection junto com uma descrição. Digite o endereço IP externo do PIX Firewall na caixa Host. Em seguida, digite o nome e a senha do grupo VPN e clique em

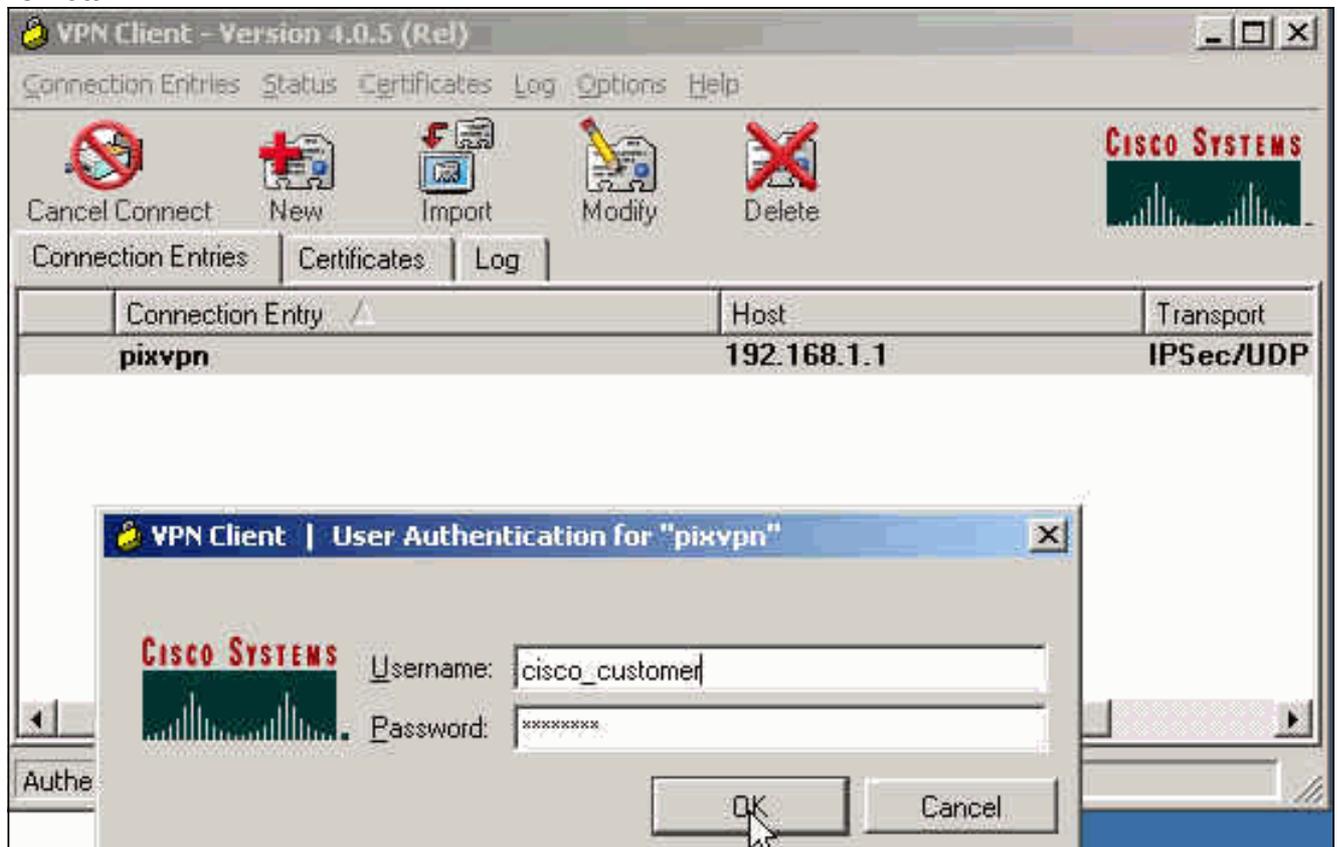

Salvar.

4. Na janela principal do VPN Client, clique na conexão que você gostaria de usar e clique no botão **Connect**.

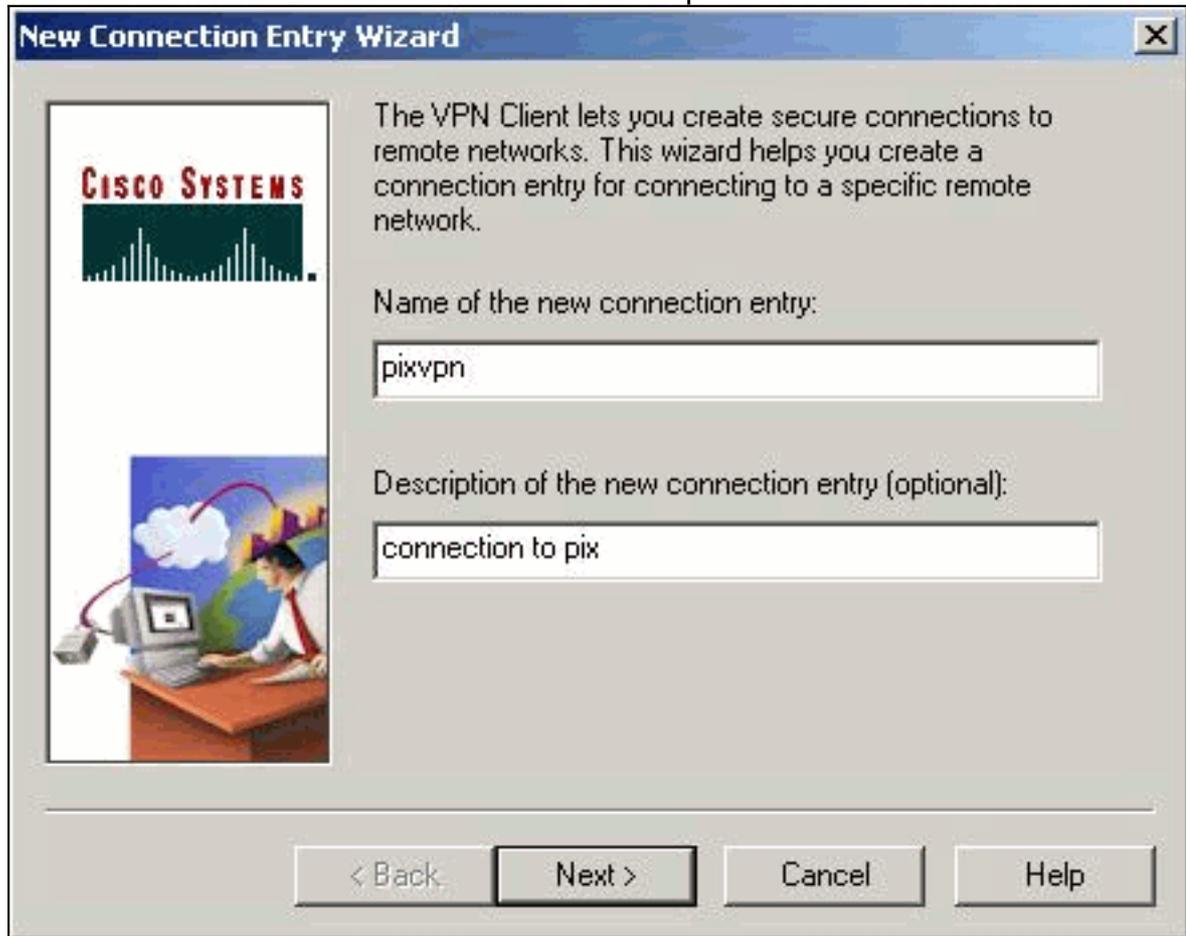

5. Quando solicitado, introduza o nome de usuário e senha para Xauth e clique em OK para conectar-se à rede remota.

Conclua estes passos para configurar a configuração do VPN Client 3.5.

1. Selecione **Start > Programs > Cisco Systems VPN Client > VPN Dialer**.
2. Clique em New para iniciar o New Connection Entry Wizard.
3. Digite o nome de sua nova entrada de conexão e clique em

New Connection Entry Wizard

The VPN Client lets you create secure connections to remote networks. This wizard helps you create a connection entry for connecting to a specific remote network.

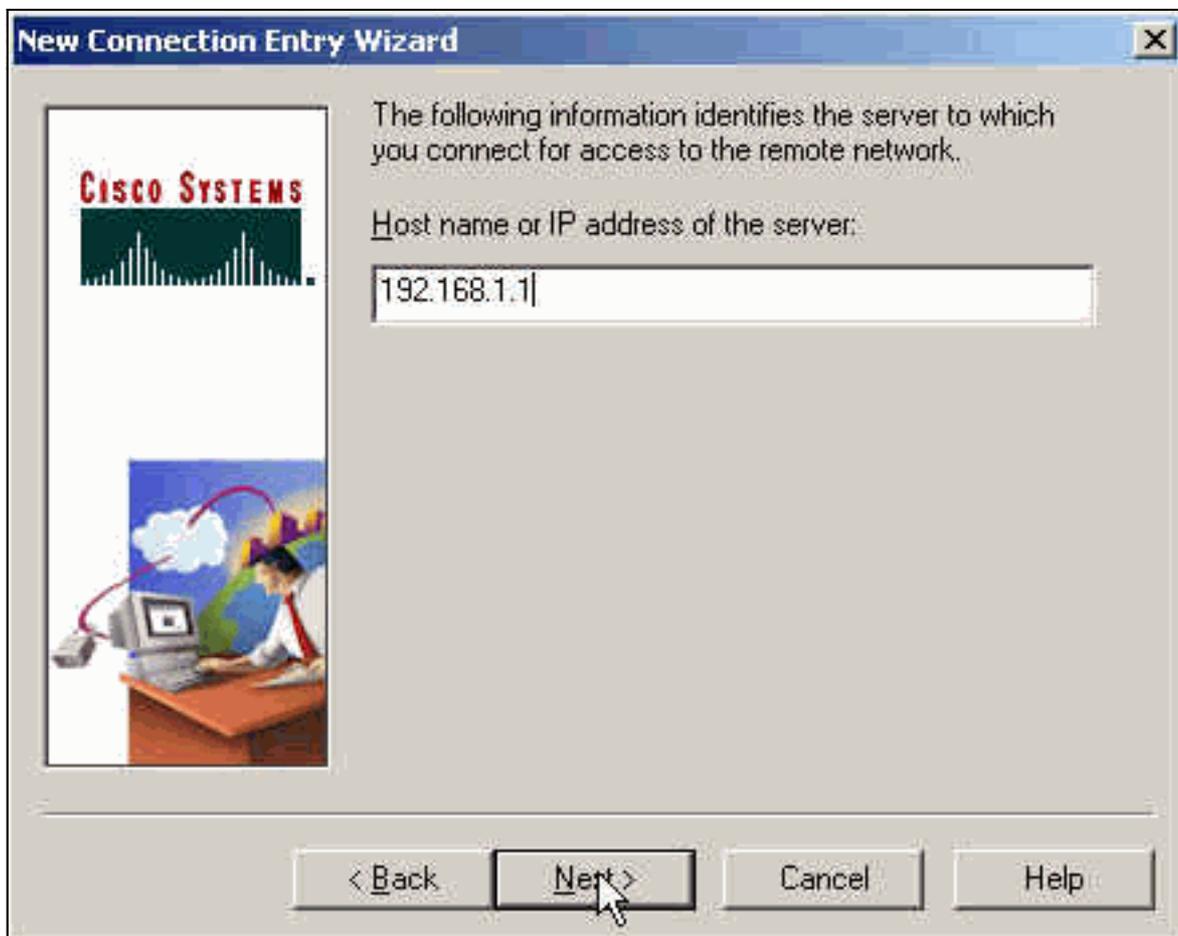

Name of the new connection entry:

Description of the new connection entry (optional):

< Back Next > Cancel Help

Next.

4. Digite o nome do host ou o endereço IP do servidor que é usado para se conectar ao servidor remoto e clique em

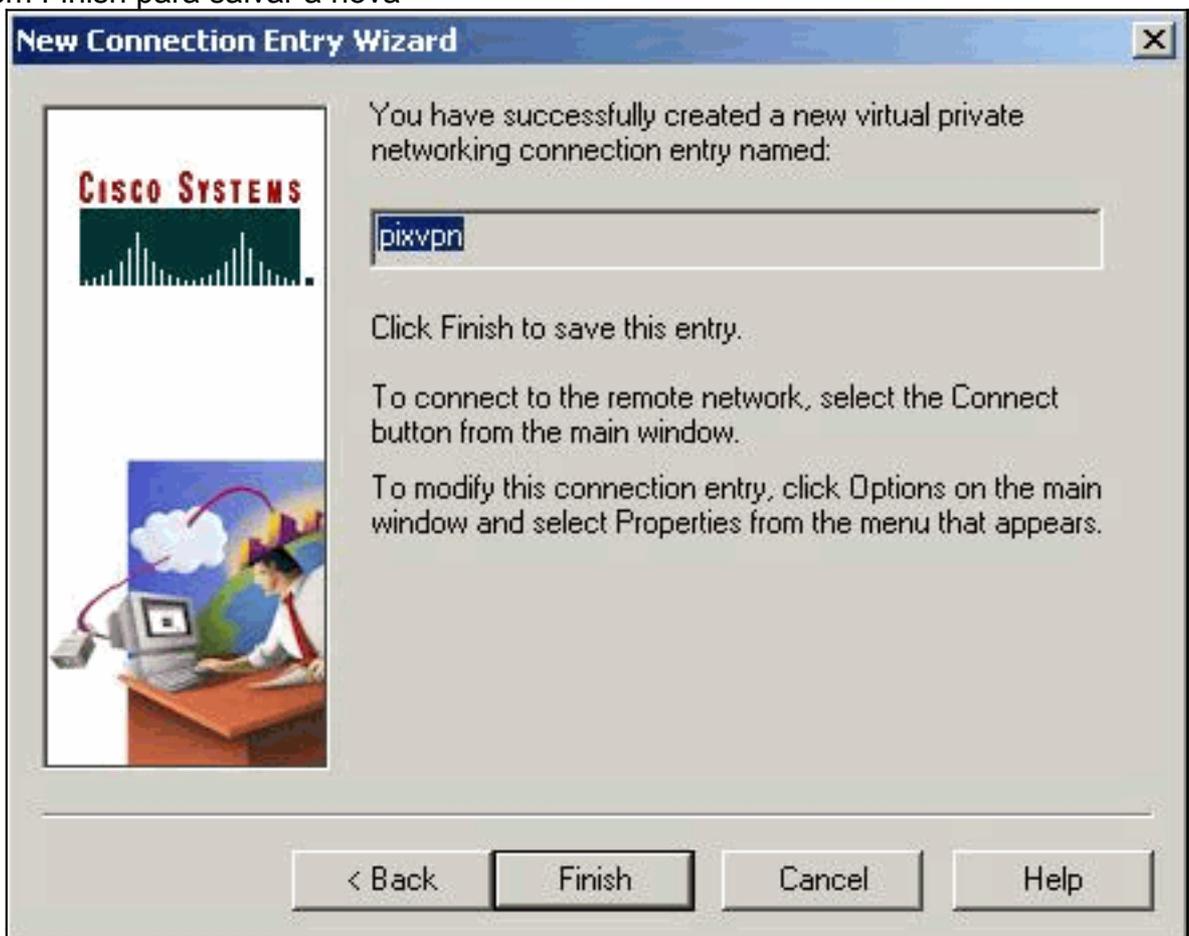

Avançar.

5. Selecione **Group Access Information** (Informações de acesso do grupo) e insira o Nome (Nome) e a Password (Senha) usados para autenticar seu acesso ao servidor remoto. Clique em

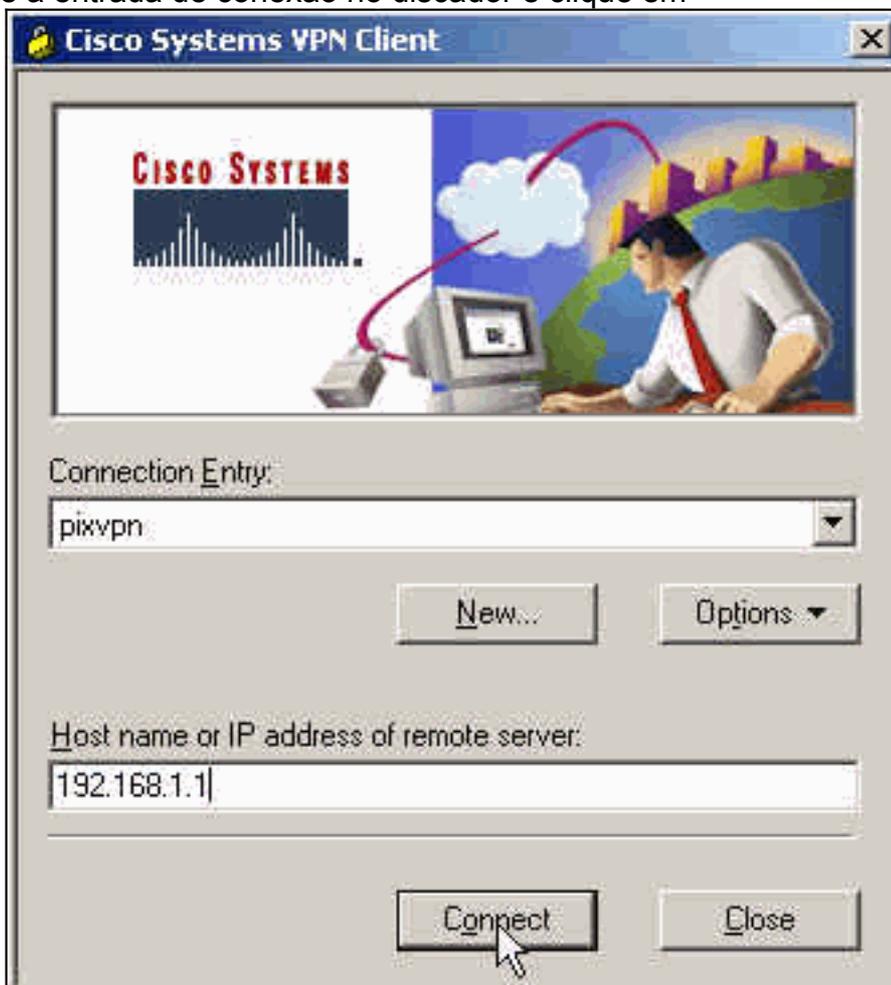

Next.

6. Clique em Finish para salvar a nova

entrada.

7. Selecione a entrada de conexão no discador e clique em

Connect.

8. Quando solicitado, introduza o nome de usuário e senha para Xauth e clique em OK para

conectar-se à rede remota.

Configuração de VPN Client 1.1

```
Network Security policy:
1- TACconn
  My Identity
    Connection security: Secure
    Remote Party Identity and addressing
    ID Type: IP subnet
    10.89.129.128
    255.255.255.128
    Port all Protocol all

  Connect using secure tunnel

    ID Type: IP address
    192.168.1.1

  Pre-shared Key=cisco1234

  Authentication (Phase 1)

  Proposal 1
    Authentication method: pre-shared key
    Encryp Alg: DES
    Hash Alg: MD5
    SA life: Unspecified
```

```
Key Group: DH 1

Key exchange (Phase 2)

Proposal 1
  Encapsulation ESP
  Encrypt Alg: DES
  Hash Alg: MD5
  Encap: tunnel
  SA life: Unspecified
  no AH

2- Other Connections
  Connection security: Non-secure
  Local Network Interface
    Name: Any
    IP Addr: Any
    Port: All
```

[Adicionar relatório](#)

A sintaxe do comando para adicionar relatório é:

```
aaa accounting include acctg_service inbound|outbound l_ip l_mask [f_ip f_mask] server_tag
```

Por exemplo, na configuração do PIX, este comando é adicionado:

```
aaa accounting include any inbound  
0.0.0.0 0.0.0.0 0.0.0.0 0.0.0.0 AuthInbound
```

Observação: o comando **sysopt connection permit-ipsec**, não o comando **sysopt ipsec pl-compatible**, é necessário para que a contabilidade Xauth funcione. O relatório Xauth não funciona apenas com o comando **sysopt ipsec pl-compatible**. A contabilidade Xauth é válida para conexões TCP, não para ICMP ou UDP.

Esta saída é um exemplo de registros de contabilidade TACACS+:

```
07/27/2004 15:17:54 cisco_customer Default Group 10.89.129.200 stop 15 .. 99 1879 .. ..  
0x5 .. PIX 10.89.129.194 telnet  
07/27/2004 15:17:39 cisco_customer Default Group 10.89.129.200 start .. .. .. .. ..  
0x5 .. PIX 10.89.129.194 telnet
```

[Verificar](#)

Use esta seção para confirmar se a sua configuração funciona corretamente.

A [Output Interpreter Tool \(somente clientes registrados\) \(OIT\) oferece suporte a determinados comandos show](#). Use a OIT para exibir uma análise da saída do comando show.

Nota: Consulte Informações Importantes sobre Comandos de Depuração antes de usar comandos debug.

Ative o Cisco Secure Log Viewer para ver as depurações no lado do cliente.

- **debug crypto ipsec**—Usado para ver as negociações de IPsec de fase 2.
- **debug crypto isakmp**—Usado para ver negociações de ISAKMP da fase 1.

Troubleshoot

Esta seção fornece informações que podem ser usadas para o troubleshooting da sua configuração. Exemplo de saída de depuração também é mostrado.

Comandos para Troubleshooting

A [Output Interpreter Tool \(somente clientes registrados\) \(OIT\) oferece suporte a determinados comandos show](#). Use a OIT para exibir uma análise da saída do comando show.

Nota: Consulte [Informações Importantes sobre Comandos de Depuração antes de usar comandos debug](#).

- **debug crypto engine**—Usado para depurar o processo do mecanismo de criptografia.

Exemplo de depurações de PIX

```
pixfirewall#show debug
debug crypto ipsec 1
debug crypto isakmp 1
debug crypto engine
debug fover status
  tx      Off
  rx      Off
  open    Off
  cable   Off
  txdmp   Off
  rxdmp   Off
  ifc     Off
  rxip    Off
  txip    Off
  get     Off
  put     Off
  verify  Off
  switch  Off
  fail    Off
  fmsg    Off
```

Depurações com VPN Client 4.x
