[Introduction](#)

Este documento demonstra como aplicar listas de acesso a interfaces de discagem com um servidor TACACS+. Há dois métodos possíveis:

- Defina a lista de acesso numerada no roteador e faça referência à lista de acesso numerada no servidor. Isso é suportado na maioria das versões do software Cisco IOS®.
- Defina toda a lista de acesso no servidor. O Cisco IOS Software Release 11.3 ou posterior é necessário para este método **por usuário**.

Observação: para ISDN, você deve usar o método **por usuário** e deve ter perfis virtuais configurados no roteador.

[Prerequisites](#)

[Requirements](#)

Não existem requisitos específicos para este documento.

[Componentes Utilizados](#)

As informações neste documento são baseadas nestas versões de software e hardware:

- Software Cisco IOS versão 11.1 ou posterior (defina as listas de acesso no roteador)Software Cisco IOS versão 11.3 ou posterior (defina listas de acesso no servidor)
- Cisco Secure ACS para UNIXCisco Secure ACS para Windows 2.x e posteriorFreeware TACACS+

Observação: este documento pressupõe que o acesso de discagem foi configurado anteriormente. Este documento não discute os detalhes da configuração de discagem. Consulte [Configuração do NAS para Acesso de Discagem Básico](#) para obter informações sobre como configurar um servidor de acesso à rede (NAS) para Discagem.

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

Conventions

Consulte as [Convenções de Dicas Técnicas da Cisco para obter mais informações sobre convenções de documentos.](#)

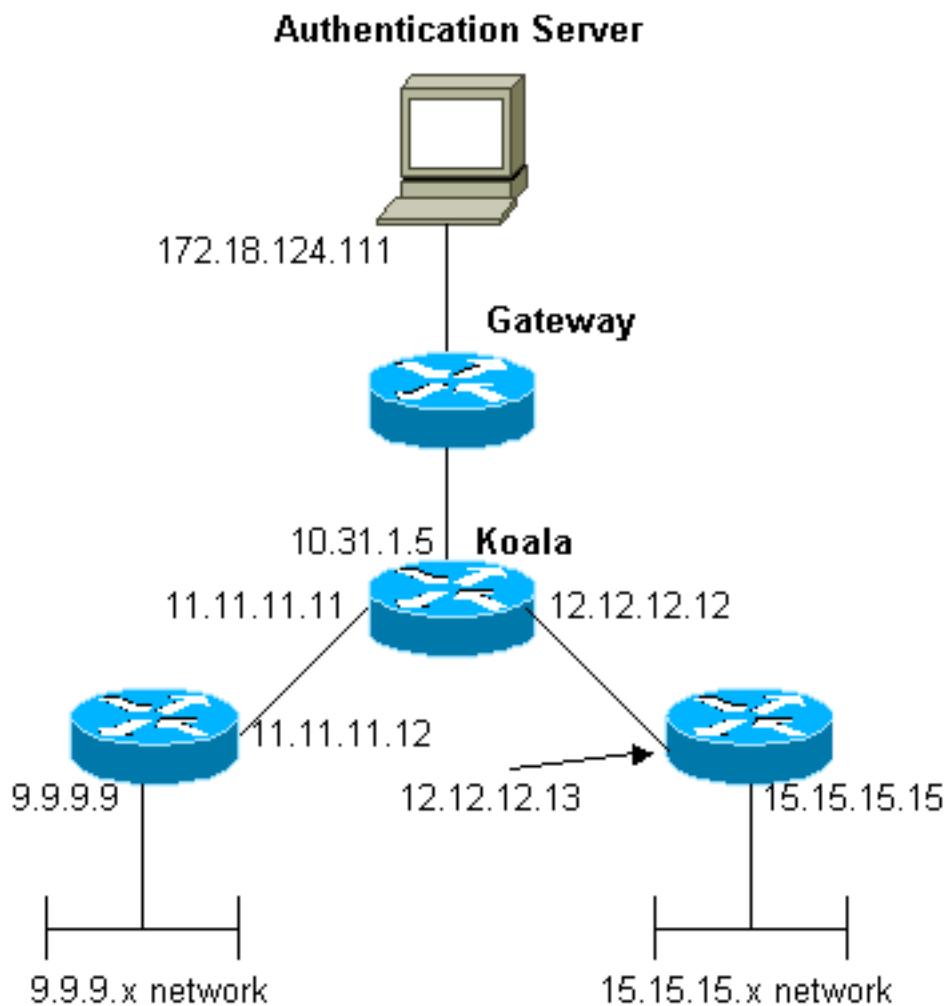

Configurar

Nesta seção, você encontrará informações para configurar os recursos descritos neste documento.

Nota: Use a Command Lookup Tool (somente clientes registrados) para obter mais informações sobre os comandos usados neste documento.

Diagrama de Rede

Este documento utiliza a seguinte configuração de rede:

Observação: as configurações permitem que o usuário que recebe um endereço 1.1.1.x de "mypool" para a rede de ping (tráfego ICMP) 9.9.9.x e Telnet (tráfego TCP) para a rede 15.15.x. Ele não permite que o usuário faça ping na rede 15.15.15.x ou Telnet para a rede 9.9.9.x.

Configurações

Este documento utiliza estas configurações.

- [Cisco 2500 Series Router executando o Cisco IOS Software Release 12.0\(5\)T](#)
- [Cisco Secure ACS para UNIX 2.3](#)
- [Cisco Secure ACS para Windows 3.2](#)

Definir listas de acesso numeradas no roteador

[Comandos para outras versões de Cisco IOS](#)

Observação: para usar esses comandos, remova os comandos em negrito da configuração do [Cisco 2500 Series Router](#) e cole esses comandos, conforme indicado pela sua versão do Cisco IOS Software.

Software Cisco IOS versão 11.3.3.T a 12.0.5.T

```
aaa authentication login default tacacs+ local
aaa authentication ppp default if-needed tacacs+ local
aaa authorization network default tacacs+
```

Software Cisco IOS versão 11.1 a 11.3.3.T

```
aaa authentication login default tacacs+
aaa authentication ppp default if-needed tacacs+
aaa authorization network tacacs+
```

[Configuração do servidor - TACACS+ Freeware](#)

```
user = chaprtr {
chap = cleartext chaprtr
service = ppp protocol = ip {
inacl=101
}
}
```

[Configuração do servidor - Cisco Secure UNIX - TACACS+](#)

```
rtp-berry# ./ViewProfile -p 9900 -u chaprtr
User Profile Information
user = chaprtr{
profile_id = 182
set server current-failed-logins = 1
profile_cycle = 2
service=ppp {
protocol=lcp {
}
protocol=ip {
set inacl=101
}
}
```

```

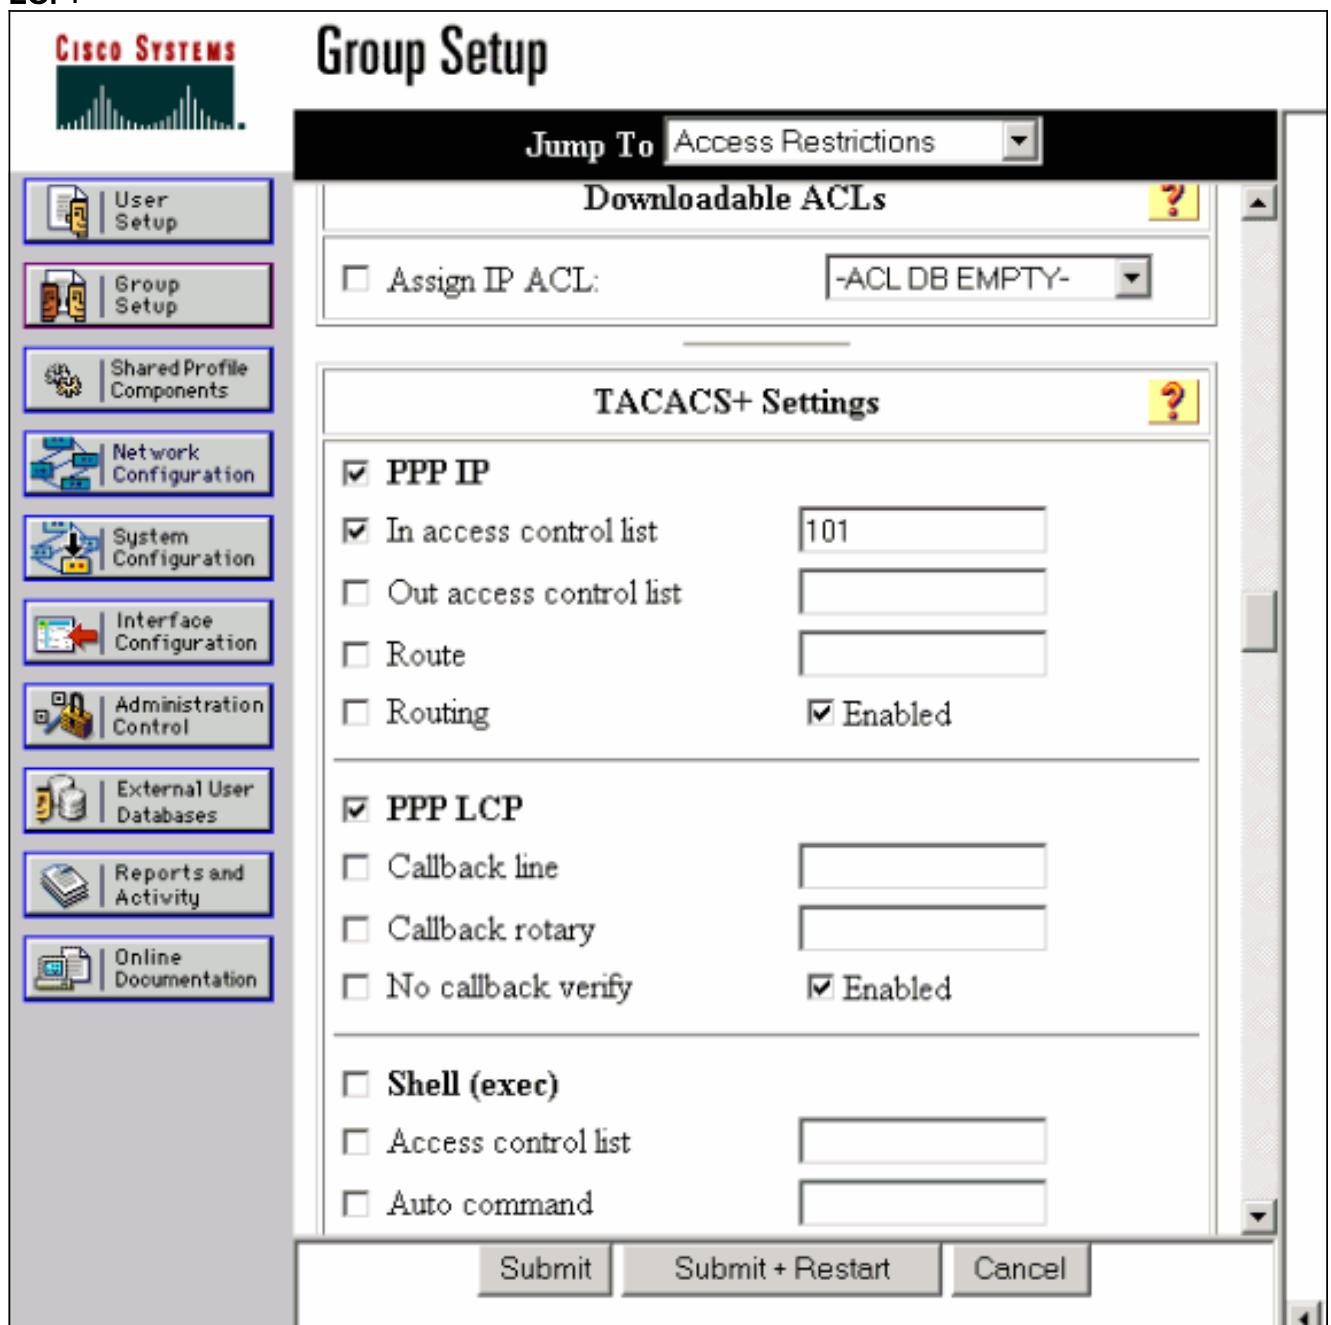

}
password = chap "chaprtr"
}

```

[Configuração do servidor - Cisco Secure ACS para Windows 2.x e posterior - TACACS+](#)

Conclua estes passos para configurar o Cisco Secure ACS para Windows para especificar quais ACLs o NAS deve aplicar.

1. Clique em **Group Setup**, selecione o grupo ao qual o usuário pertence e clique em **Edit Settings**.
2. Clique nas caixas de seleção **PPP IP**, **In access control list** e **PPP LCP** na seção TACACS+ Settings. Especifique o número da ACL a ser aplicada (nesse caso, 101) na caixa "In access control list" (Na lista de controle de acesso).
3. Marque **Enabled (Habilitado)** para habilitar as opções **PPP IP** e **PPP LCP**.

[Debug de Exemplo de Roteador](#)

```

[**Definir listas de acesso no servidor**](#)

Observação: as instruções de rota não precisam ser passadas do servidor para o roteador. O usuário de discagem normalmente coleta as rotas do roteador. A presença das instruções de rota no roteador depende se as rotas são passadas pelo servidor ou retiradas do roteador:

```

ip route 9.9.9.0 255.255.255.0 11.11.11.12
ip route 15.15.15.0 255.255.255.0 12.12.12.13

```

Nesta configuração de exemplo, passar as rotas para baixo do servidor é apenas para fins de ilustração.

Configuração do roteador

[Configuração do servidor - Cisco Secure Windows 2.x - TACACS+](#)

Conclua estes passos para configurar o Cisco Secure para Windows para passar ACLs para o NAS.

1. Clique em **Interface Configuration** e selecione **TACACS+ Cisco**.
2. Marque **Exibir uma janela para cada serviço selecionado na qual você pode inserir atributos TACACS+ personalizados** na seção 'Opções avançadas de configuração' e clique em **Enviar**.

3. Clique em **Group Setup**, selecione o grupo ao qual o usuário pertence e clique em **Edit Settings**.
4. Vá para a seção **PPP IP** e clique nas caixas de seleção **PPP IP**, **Custom Attributes** e **Enable** em **TACACS+ Settings**. Digite o texto mostrado aqui na caixa Atributos personalizados e clique em **Enviar**.

```
route#1=9.9.9.9 255.255.255.255 11.11.11.12
route#2=15.15.15.15 255.255.255.255 12.12.12.13
route#3=15.15.15.16 255.255.255.255 12.12.12.13
inac1#1=permit icmp 1.1.1.0 0.0.0.255 9.9.9.0 0.0.0.255
inac1#2=permit tcp 1.1.1.0 0.0.0.255 15.15.15.0 0.0.0.255
```

Verificar

No momento, não há procedimento de verificação disponível para esta configuração.

Troubleshoot

Esta seção fornece informações que podem ser usadas para o troubleshooting da sua configuração.

Comandos para Troubleshooting

A [Output Interpreter Tool \(somente clientes registrados\) \(OIT\) oferece suporte a determinados comandos show.](#) Use a OIT para exibir uma análise da saída do comando show.

Nota: Consulte [Informações Importantes sobre Comandos de Depuração](#) antes de usar comandos debug.

- **debug aaa authentication** — Exibe informações sobre autenticação AAA/TACACS+.
- **debug aaa authorization** — Exibe informações sobre a autorização AAA/TACACS+.
- **debug aaa per-user** —Exibe informações sobre as configurações por usuário no roteador ou nos servidores de acesso que são enviados de um servidor AAA.
- **debug tacacs+** — Exibe informações detalhadas de depuração associadas ao TACACS+.
- **debug ppp negotiation** — Exibe os pacotes PPP transmitidos durante a inicialização do PPP, onde as opções do PPP são negociadas.

Consulte [Troubleshooting de Listas de Acesso em Interfaces de Discagem](#) para obter informações sobre troubleshooting.
