[Introduction](#)

Observação: as informações neste documento são baseadas no Cisco IOS® Software Releases 11.2 e posteriores.

Este documento examina problemas comuns de depuração para TACACS+ quando o PAP (Password Authentication Protocol) ou o CHAP (Challenge Handshake Authentication Protocol Protocolo de Autenticação de Handshake de Desafio) são usados. Os parâmetros de configuração de PC comuns para Microsoft Windows 95, Windows NT, Windows 98 e Windows 2000 são fornecidos, bem como exemplos de configurações e exemplos de debugações corretas e incorretas.

[Prerequisites](#)

[Requirements](#)

Não existem requisitos específicos para este documento.

Componentes Utilizados

Este documento não se restringe a versões de software e hardware específicas.

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

Conventions

Consulte as [Convenções de Dicas Técnicas da Cisco para obter mais informações sobre convenções de documentos](#).

Configurações comuns de PC

Windows 95

Conclua estes passos:

1. Na janela Rede dial-up, escolha o nome da conexão e, em seguida, Arquivo > Propriedades.
2. Na guia Server Type (Tipo de servidor), verifique se a caixa **Require Encrypted Password (Exigir senha criptografada)** abaixo de Type of Dial-up Server (Tipo de servidor dial-up) está marcada. Se esta caixa estiver marcada, o PC aceitará somente a autenticação CHAP. Se essa caixa não estiver marcada, o PC aceitará a autenticação PAP ou CHAP.

Windows NT

Conclua estes passos:

1. Na janela Rede dial-up, escolha o nome da conexão e escolha Arquivo > Propriedades.
2. Verifique as configurações na guia Segurança: Se a caixa **Aceitar qualquer autenticação, incluindo texto claro**, estiver marcada, o PC aceitará PAP ou CHAP. Se a caixa **Aceitar somente autenticação criptografada** estiver marcada, o PC aceitará somente a autenticação CHAP.

Windows 98

Conclua estes passos:

1. Na janela Rede dial-up, escolha o nome da conexão e escolha Propriedades.
2. Na guia Server Types, verifique as configurações na área Advanced Options: Se a caixa **Exigir senha criptografada** não estiver marcada, o PC aceitará a autenticação PAP ou CHAP. Se a caixa **Exigir senha criptografada** estiver marcada, o PC aceitará somente a autenticação CHAP.

Windows 2000

Conclua estes passos:

1. Em Conexões dial-up e de rede, escolha o nome da conexão e escolha **Propriedades**.
2. Na guia Segurança, na área **Avançado > Configurações > Permitir estes protocolos**: Se a caixa **Senha não criptografada (PAP)** estiver marcada, o PC aceitará PAP. Se a caixa **Challenge Handshake Authentication Protocol (CHAP)** estiver marcada, o PC aceitará CHAP por RFC 1994 . Se a caixa **Microsoft CHAP (MS-CHAP)** estiver marcada, o PC aceitará MS-CHAP versão 1 e não aceitará CHAP por RFC 1994.

Exemplos de configurações e depurações

Configuração - TACACS+ e PAP

```

Current configuration:

Comandos para outras versões de Cisco IOS

Observação: para usar esses comandos, remova os comandos em negrito da configuração e cole nesses comandos no, conforme indicado pela versão do Cisco IOS.

Cisco IOS 11.3.3.T até 12.0.5.T

```

aaa authen login default tacacs+ local
aaa authen ppp default if-needed tacacs+ local
aaa authorization exec default tacacs+ if-authenticated
aaa authorization network default tacacs+ if-authenticated

```

Cisco IOS 12.0.5.T e posterior

```

aaa authen login default group tacacs+ local
aaa authen ppp default if-needed group tacacs+ local
aaa authorization exec default group tacacs+ if-authenticated
aaa authorization network default group tacacs+ if-authenticated

```

Exemplo de depurações - TACACS+ e PAP

Observação: na saída de depuração, o texto em negrito destaca problemas na depuração. O texto sem formatação indica uma boa depuração.

[Comandos para outras versões de Cisco IOS](#)

Observação: Observação: Para usar esses comandos, remova os comandos em negrito da configuração e cole esses comandos, conforme indicado pela versão do Cisco IOS.

[Cisco IOS 11.3.3.T até 12.0.5.T](#)

```
aaa authen login default tacacs+ local
aaa authen ppp default if-needed tacacs+ local
aaa authorization exec default tacacs+ if-authenticated
aaa authorization network default tacacs+ if-authenticated
```

[Cisco IOS 12.0.5.T e posterior](#)

```
aaa authen login default group tacacs+ local
aaa authen ppp default if-needed group tacacs+ local
aaa authorization exec default group tacacs+ if-authenticated
aaa authorization network default group tacacs+ if-authenticated
```

[Exemplo de depurações - TACACS+ e CHAP](#)

Observação: na saída de depuração, o texto em negrito destaca problemas na depuração. O texto sem formatação indica uma boa depuração.

```
General OS:
TACACS access control debugging is on
AAA Authentication debugging is on
AAA Authorization debugging is on
PPP:
PPP authentication debugging is on
PPP protocol negotiation debugging is on

Comandos debug

Esses comandos debug foram usados para produzir o exemplo de saída debug neste documento.

Observação: antes de emitir comandos debug, consulte [Informações importantes sobre comandos debug](#).

- **debug aaa authentication** — Exibe informações sobre a autenticação AAA.
- **debug aaa authorization** — Exibe informações sobre a autorização AAA.
- **debug tacacs+** — Exibe informações detalhadas de depuração associadas ao TACACS+.
