[Introduction](#)

Esta configuração de exemplo demonstra como formar um túnel IPsec de um PC que executa o Cisco VPN Client (4.x e posterior) (endereço IP atribuído estático/dinâmico) para um Cisco VPN 3000 Concentrator para permitir que o usuário acesse com segurança a rede dentro do VPN Concentrator.

Consulte [Utilização do Cisco Secure ACS para Windows com o VPN 3000 Concentrator - IPSec](#) para saber mais sobre o mesmo cenário com a autenticação RADIUS usando o Cisco ACS.
Consulte [Configurando o Cisco VPN 3000 Concentrator com MS RADIUS](#) para saber mais sobre o mesmo cenário com a autenticação MS-RADIUS.

[Prerequisites](#)

[Requirements](#)

Não existem requisitos específicos para este documento.

Componentes Utilizados

As informações neste documento são baseadas nestas versões de software e hardware:

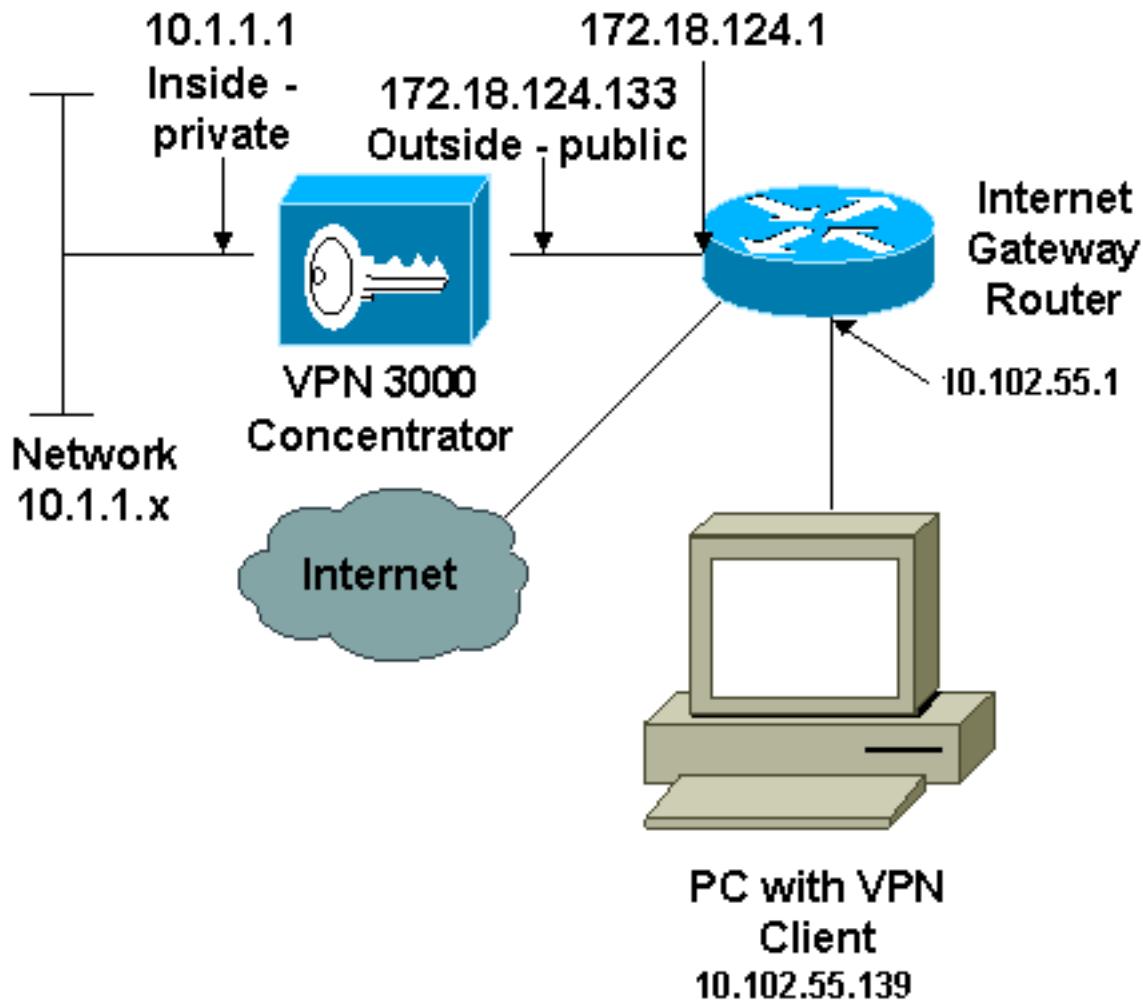

- Cisco VPN 3030 Concentrator versão 4.1.7.A
- Cisco VPN Client versão 4.x e posterior

Observação: essa configuração foi testada novamente recentemente usando o Cisco VPN Concentrator versão 4.7.2.H.

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

Diagrama de Rede

Este documento utiliza a seguinte configuração de rede:

Observação: os esquemas de endereçamento IP usados nesta configuração não são legalmente roteáveis na Internet. São endereços RFC 1918 usados em um ambiente de laboratório.

Conventions

Consulte as [Convenções de Dicas Técnicas da Cisco](#) para obter mais informações sobre

[convenções de documentos.](#)

Configurar o VPN 3000 Concentrator

Conclua estes passos para configurar o VPN 3000 Concentrator.

Observação: devido a limitações de espaço, algumas capturas de tela mostram apenas telas parciais.

1. Conecte-se à porta do console do VPN Concentrator e verifique se há endereços IP atribuídos às interfaces privada (interna) e pública (externa). Além disso, verifique se há um gateway padrão atribuído para que o VPN Concentrator possa encaminhar os pacotes para os destinos que ele não conhece para o gateway padrão (normalmente o Internet Gateway Router):

2. Escolha a opção de filtro **Público** para a interface Pública.

You are modifying the interface you are using to connect to this device. If you make any changes, you will break the connection and you will have to restart from the login screen.

Configuring Ethernet Interface 2 (Public).

General Parameters			
Sel	Attribute	Value	Description
<input type="radio"/>	Disabled		Select to disable this interface.
<input type="radio"/>	DHCP Client		Select to obtain the IP Address, Subnet Mask and Default Gateway via DHCP.
<input checked="" type="radio"/>	Static IP Addressing		Select to configure the IP Address and Subnet Mask.
	IP Address	192.168.1.2	Enter the IP Address and Subnet Mask for this interface.
	Subnet Mask	255.255.255.0	
	Public Interface	<input checked="" type="checkbox"/>	Check to make this interface a "public" interface.
	MAC Address	00.03.A0.89.BF.D1	The MAC address for this interface.
	Filter	2. Public (Default)	Select the filter for this interface.
	Speed	10/100 auto	Select the speed for this interface.

- Aponte um navegador para a interface interna do VPN Concentrator e escolha Configuration > System > Address Management > Address Pools > Add para atribuir um intervalo disponível de endereços IP. Especifique uma faixa de endereços IP que não entrem em conflito com nenhum outro dispositivo na rede interna: **Observação:** essas capturas de tela mostram o gerenciamento de interface público externo porque foram adicionados filtros para permitir isso somente em uma configuração de laboratório.

The screenshot shows the Cisco VPN 3000 Concentrator Series Manager web interface. The left sidebar contains a navigation tree with sections like Configuration, System, Address Management, Assignment, Pools, and others. The main content area is titled "Configuration | System | Address Management | Pools | Add". It has fields for "Range Start" (10.1.1.100), "Range End" (10.1.1.200), and "Subnet Mask" (255.255.255.0). Below these fields are "Add" and "Cancel" buttons.

4. Escolha Configuration > System > Address Management > Assignment, marque a caixa Use Address Pools e clique em Apply para informar ao VPN Concentrador para usar o pool.

The screenshot shows the Cisco VPN 3000 Concentrator Series Manager web interface. The left sidebar contains a navigation tree with sections like Configuration, System, Address Management, Assignment, Pools, and others. The main content area is titled "Configuration | System | Address Management | Assignment". It displays options for address assignment: "Use Client Address" (unchecked), "Use Address from Authentication Server" (unchecked), "Use DHCP" (unchecked), and "Use Address Pools" (checked). Below these is a "IP Reuse Delay" field set to 0. At the bottom are "Apply" and "Cancel" buttons.

5. Escolha Configuration > User Management > Groups > Add Group para configurar um grupo IPsec para os usuários e definir um nome de grupo e uma senha. Este exemplo usa group="ipsecgroup" com password/verify="cisco123":

Configuration | User Management | Users | Add

This section lets you add a user. Uncheck the Inherit? box and enter a new value to override group values.

Identity General IPSec PPTP/L2TP

Identity Parameters		
Attribute	Value	Description
Username	ipsecuser	Enter a unique username.
Password	xyz12345	Enter the user's password. The password must satisfy the group password requirements.
Verify	xyz12345	Verify the user's password.
Group	ipsecgroup	Enter the group to which this user belongs.
IP Address		Enter the IP address assigned to this user.
Subnet Mask		Enter the subnet mask assigned to this user.

Add Cancel

Cisco SYSTEMS

[Atribuir um endereço IP estático a um usuário](#)

Para atribuir um endereço IP estático para o usuário VPN remoto toda vez que se conectar ao VPN 3000 Series Concentrator, escolha Configuration > User Management > Users > Modify ipsecuser2 > identity. Nesta configuração para o usuário (ipsecuser2), o endereço IP estático 10.2.2.1/24 é atribuído sempre que o usuário se conecta.

Configuration | User Management | Users | Modify ipsecuser2

Check the **Inherit?** box to set a field that you want to default to the group value. Uncheck the **Inherit?** box and enter values.

Identity	General	IPSec	PPTP/L2TP
Identity Parameters			
Attribute	Value	Description	
Username	ipsecuser2	Enter a unique username.	
Password	XXXXXXXXXXXXXX	Enter the user's password. The password must satisfy the group password requirements.	
Verify	XXXXXXXXXXXXXX	Verify the user's password.	
Group	ipsecgroup	Enter the group to which this user belongs.	
IP Address	10.2.2.1	Enter the IP address assigned to this user.	
Subnet Mask	255.255.255.0	Enter the subnet mask assigned to this user.	

Apply | **Cancel**

Observação: certifique-se de ir para Configuration > System > Address Management > Assignment para garantir que o VPN Concentrador provisione o endereço IP atribuído. Marque **Usar endereço do servidor de autenticação** para atribuir endereços IP recuperados de um servidor de autenticação por usuário. O endereço IP e a máscara de sub-rede inseridos na guia Parâmetros de Identidade na janela Gerenciamento de Usuário > Usuários > Adicionar ou Modificar é considerado como estando no servidor de autenticação interno.

Configuration | System | Address Management | Assignment

This section presents Address Assignment options. Each of the following methods are tried, in order, until an address is found.

Use Client Address Check to use the IP address supplied by the client. This can be overridden by user/group configuration.

Use Address from Authentication Server Check to use an IP address retrieved from an authentication server for the client.

Use DHCP Check to use DHCP to obtain an IP address for the client.

Use Address Pools Check to use internal address pool configuration to obtain an IP address for the client.

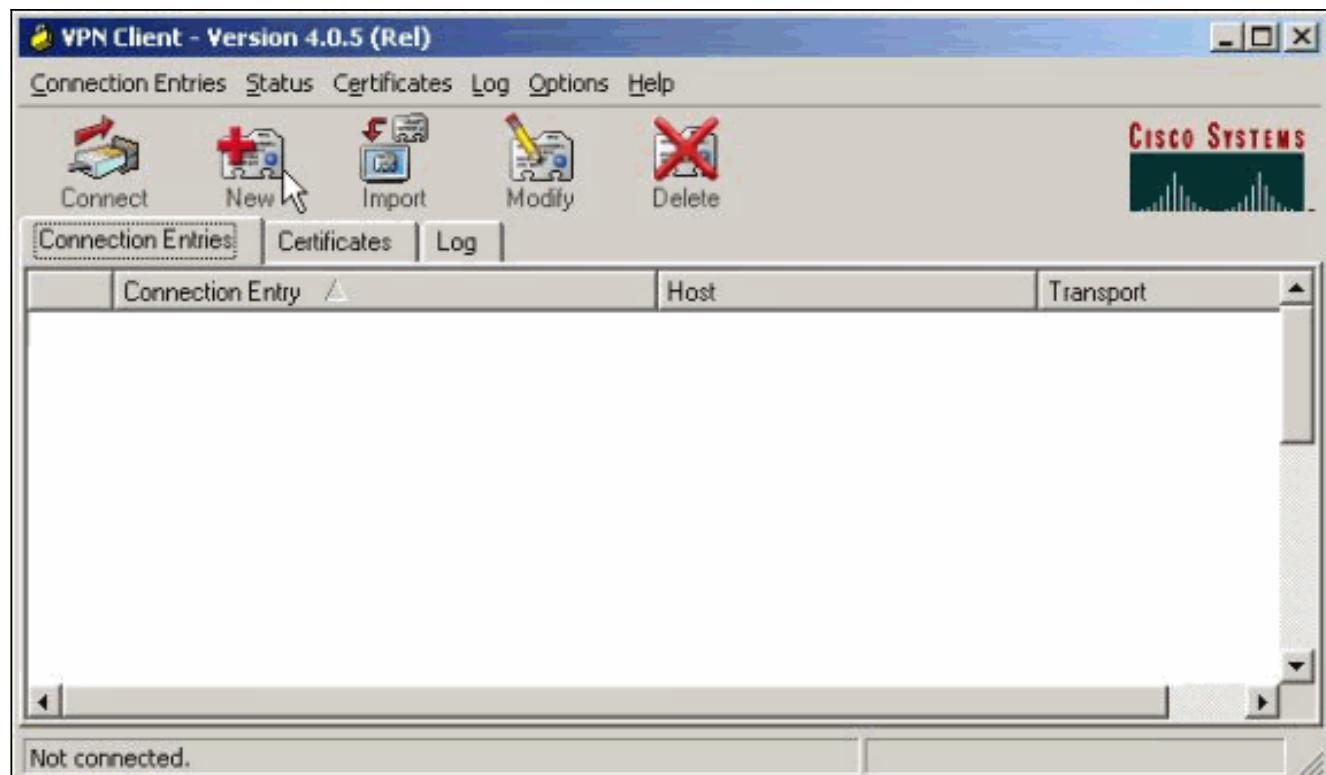

IP Reuse Delay Enter the length of time in minutes (0-480) that a released internal address pool IP address will be held before being reassigned.

Apply | **Cancel**

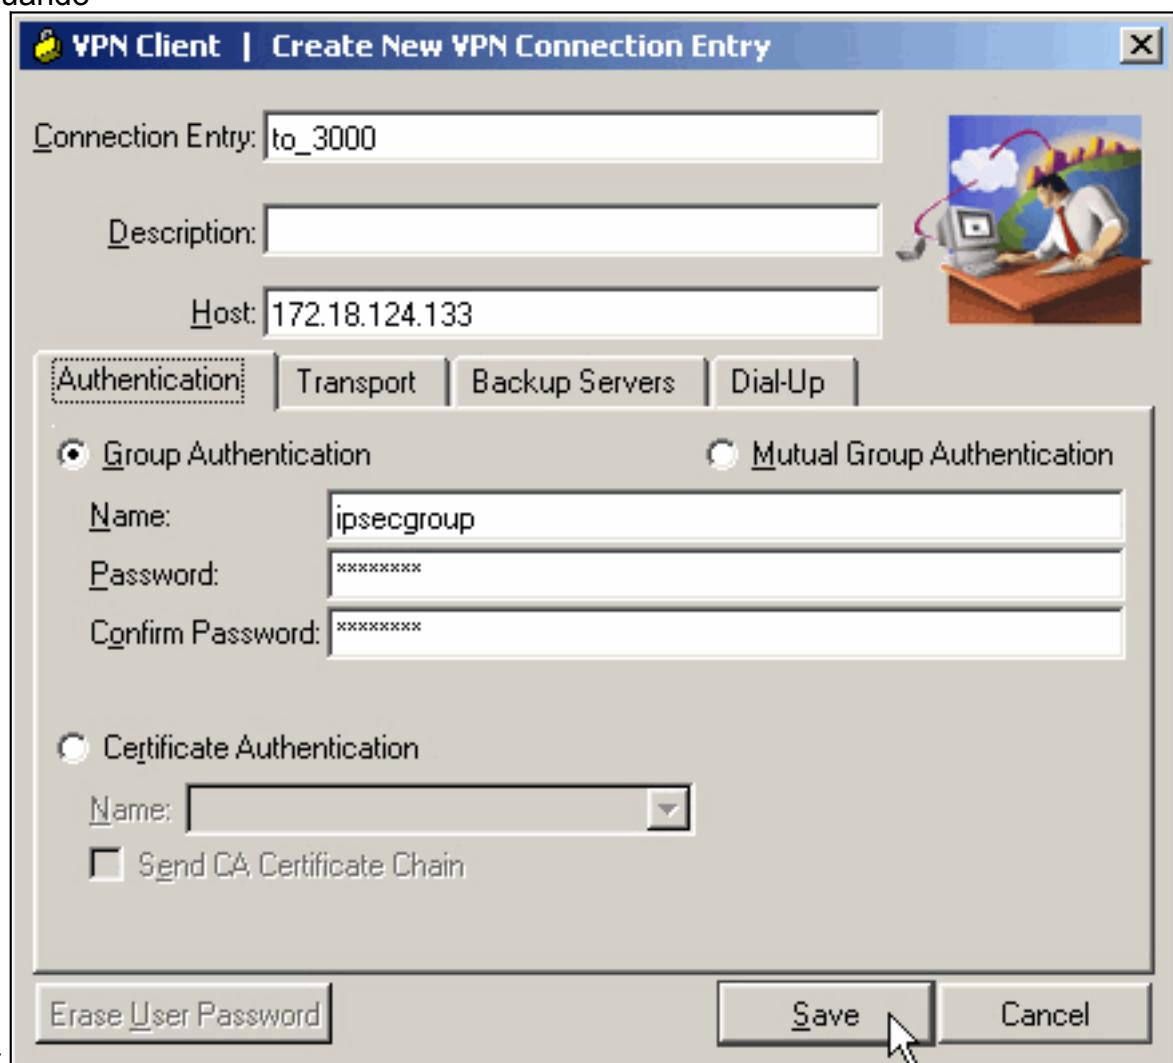

Configurar o VPN Client

Conclua estes passos para configurar o VPN Client.

1. Clique em **New** para criar uma nova entrada de conexão.

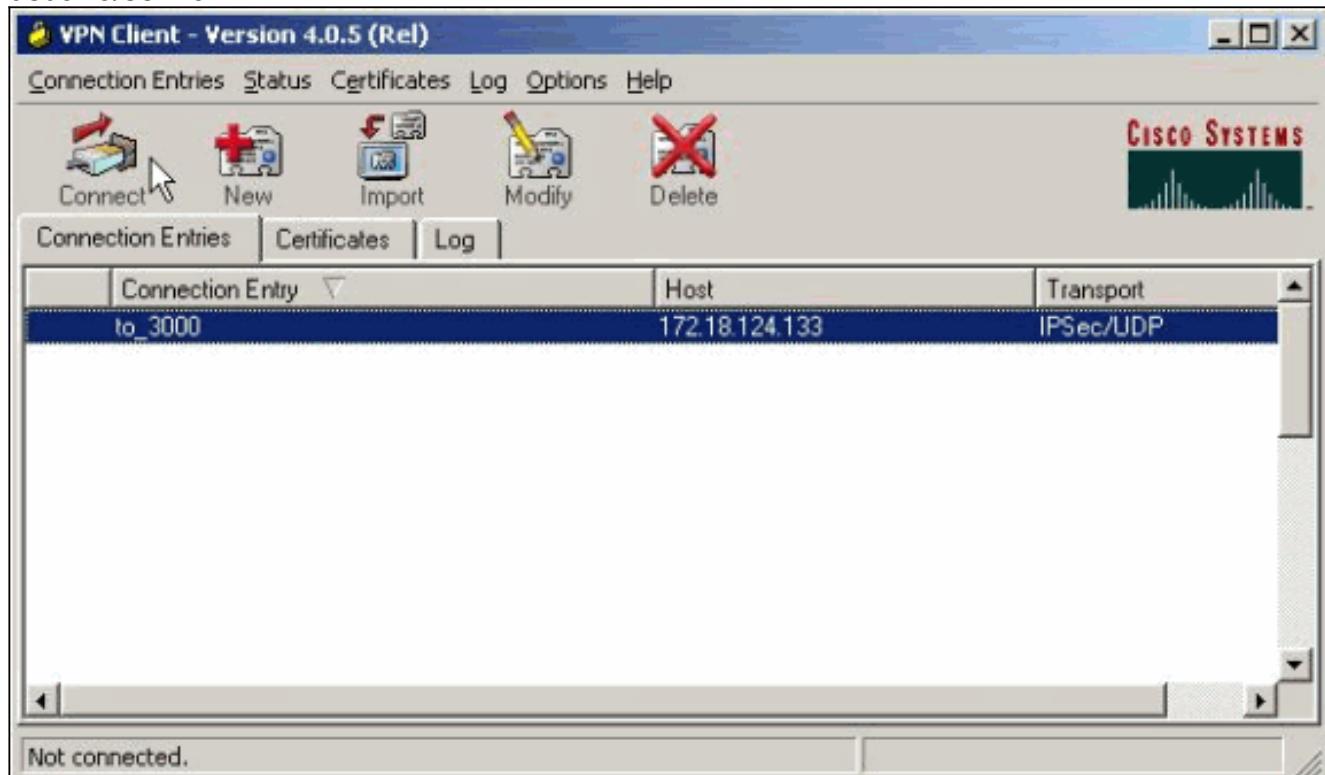

2. Nomeie a conexão, insira o endereço IP da interface pública do VPN Concentrador e forneça as credenciais do grupo. Nesse caso, o nome é **ipsecgroup** e a senha é **cisco123**. Clique em **Salvar** quando

terminar.

3. Selecione a entrada da ligação na lista e clique em **Ligar**. Quando for solicitado o nome de usuário/senha, digite seu nome de

usuário/senha.

Verificar

No momento, não há procedimento de verificação disponível para esta configuração.

Troubleshoot

Essas seções fornecem informações que você pode usar para solucionar problemas de sua configuração.

A [Output Interpreter Tool \(somente clientes registrados\) \(OIT\)](#) oferece suporte a determinados comandos show. Use a OIT para exibir uma análise da saída do comando show.

Nota: Consulte [Informações Importantes sobre Comandos de Depuração](#) antes de usar os comandos debug.

que pode dar errado

Esses são possíveis erros que podem ocorrer. Consulte as seções [VPN Client](#) e [VPN Concentrator](#) para obter as resoluções para esses erros.

- Um usuário recebe a mensagem `Unable to negotiation IPSec or host did not response.` A depuração do VPN 3000 mostra:

```
14 02/20/2001 08:59:29.100 SEV=4 IKE/22 RPT=5 10.102.55.139  
No Group found matching badgroup for Pre-shared key peer 10.102.55.139
```

Causa normal: O usuário tenta se conectar com um nome de grupo que não está configurado.

- Um usuário não pode se conectar e a depuração do VPN 3000 mostra:

```
Filter missing on interface 2, IKE data from Peer x.x.x.x dropped
```

Causa normal: O filtro está ausente na interface pública. Geralmente é o filtro "público" (mas pode ser o filtro privado); "none" não é válido). Escolha Configuration > Interfaces > Ethernet 2 > Filter e torne o filtro "público" ou outro valor (ou seja, não "nenhum"). Consulte a [seção de configuração](#) deste documento para obter mais informações sobre como configurar o filtro.

- Um usuário não pode se conectar e não pode negociar IPsec ou o host não respondeu. A depuração do VPN 3000 mostra:

```
Terminating connection attempt: IPSEC not permitted for group >group<
```

Causa normal: O IPsec não está selecionado no grupo. Escolha Configuration > User Management > Groups > <group> > Modify > General e verifique se IPsec está selecionado em Tunneling Protocols.

- Um usuário não pode se conectar após várias tentativas e vê Falha na autenticação do usuário. A depuração do VPN 3000 mostra:

```
Authentication rejected: Reason = User was not found handle = 14, server = Internal,  
user = <user>
```

Causa normal: O usuário não existe no banco de dados de usuário. Certifique-se de inserir o nome de usuário correto quando a janela de autenticação do usuário for exibida.

- Os usuários não podem se conectar e a depuração do VPN 3000 mostra:

```
Filter missing on interface 0, IKE data from Peer x.x.x.x dropped
```

Causa normal: A rota padrão está ausente. Verifique se há uma rota padrão na configuração.

Escolha Configuration > System > IP routing > Default Gateway e especifique o gateway padrão.

- Um usuário não pode se conectar e vê que sua conexão IPsec foi encerrada pelo peer remoto. A depuração do VPN 3000 mostra:

```
User [ <user> ]  
IKE rcv'd FAILED IP Addr status!
```

Causa normal: Não há opção marcada para fornecer um endereço IP ao VPN Client. Escolha Configuration > System > Address Management > Address Assignment e selecione uma opção.

- Um usuário não pode se conectar e vê falha na autenticação do usuário. A depuração do VPN 3000 mostra:

```
The calculated HASH doesn't match the received value
```

Causa normal: A senha do grupo no VPN Client é diferente da senha configurada no VPN Concentrator. Verifique a senha no VPN Client e no Concentrador.

- Você configurou o pool VPN para os recursos por trás do VPN Concentrator. Você pode acessar os recursos, mas não pode fazer ping neles.

Causa normal: Há um PIX atrás do VPN Concentrator que bloqueia os pacotes ICMP. Faça login nesse PIX e aplique uma lista de acesso para ativar pacotes ICMP.

- Não há depurações do VPN Concentrator e todos ou alguns usuários não podem se conectar. O filtro público padrão do VPN Concentrator contém regras para permitir esse tráfego: Protocolo = UDP, porta = 500Protocolo = UDP, porta = 10000Protocolo = ESPProtocolo = AHSe os filtros do VPN Concentrator permitirem esse tráfego, um dispositivo entre o VPN Client e o VPN Concentrator poderá estar bloqueando algumas dessas portas (talvez um firewall). Para verificar, tente se conectar ao VPN Concentrator da rede imediatamente fora do VPN Concentrator. Se isso funcionar, um dispositivo entre o VPN Client PC e o VPN Concentrator está bloqueando o tráfego.

- Um usuário não pode se conectar e vê estes registros:

```
07/10/2006 11:48:59.280 SEV=4 IKE/0 RPT=141 10.86.190.92
```

```
Group [NYMVPN]
```

```
received an unencrypted packet when crypto active!! Dropping packet
```

Causa normal: Um nome ou senha de grupo definido incorretamente. Recrie o novo nome de

grupo e senha no VPN 3000 Concentrator para o VPN Client.

- Um usuário pode fazer ping ou executar telnet para um host atrás do VPN Concentrator, mas o usuário não pode usar o Remote Desktop 9RDP) ou aplicativos semelhantes.**Causa comum:**O filtro Público não está ativado na interface Pública. Consulte a etapa 2 na seção [Configurar o VPN 3000 Concentrator](#) deste documento.
- Um usuário pode se conectar, mas nenhum tráfego passa pelo túnel VPN.**Causa normal:**NAT-Transparency não está habilitado. Em muitos casos, o VPN Client está por trás de um dispositivo PAT. O PAT depende dos números de porta TCP e UDP para conservar espaço de endereço. Mas o ESP, que encapsula o tráfego VPN, é um protocolo separado do TCP ou do UDP. Isso significa que muitos dispositivos PAT não podem lidar com o tráfego ESP. O NAT-T encapsula pacotes ESP em pacotes UDP, permitindo que eles passem facilmente por um dispositivo PAT. Assim, para permitir que o tráfego ESP flua através de um dispositivo PAT, você precisa ativar o NAT-T no concentrador. Consulte [Configurando o modo transparente de NAT para IPSec no VPN 3000 Concentrator](#) para obter mais informações.

[Cliente de VPN](#)

Escolha Iniciar > Programas > Cisco Systems VPN 3000 Client > Log Viewer para exibir o log viewer.

[Concentrador de VPN](#)

Escolha Configuration > System > Events > Classes para ativar essa depuração se houver falhas de conexão de eventos:

- AUTH - Gravidade para registro 1-13
- AUTHDBG - Gravidade para registro 1-13
- IKE - Gravidade para registro 1-13
- IKEDBG - Gravidade para registro 1-13
- IPSEC - Gravidade para registro 1-13
- IPSECDBG - Gravidade para registro 1-13

Observação: se necessário, AUTHDECODE, IKEDECODE, IPSECDECODE podem ser adicionados posteriormente.

Consulte [Troubleshooting de Problemas de Conexão no VPN 3000 Concentrator](#) para obter mais detalhes sobre a solução de problemas.
