## Introduction

Este documento descreve como verificar o SPAN e o ERSPAN nos Catalyst 9000 Series Switches.

## Prerequisites

### Requirements

Não existem requisitos específicos para este documento.

### Componentes Utilizados

As informações neste documento são baseadas nestas versões de software e hardware:

- Catalyst 9300 (Cisco IOS®-XE 17.3.5)
- Catalyst 9500 (Cisco IOS®-XE 17.3.5)

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. Se a rede estiver ativa, certifique-se de que você entenda o impacto potencial de qualquer comando.

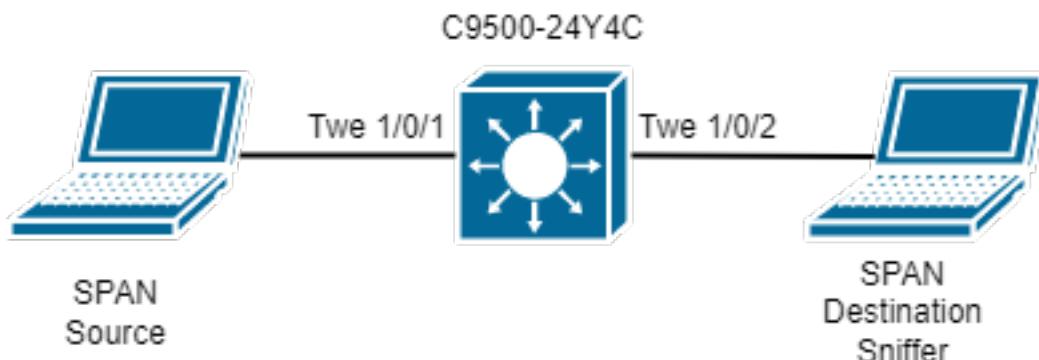

### Produtos Relacionados

Este documento também pode ser usado com as seguintes versões de hardware e software:

- Catalyst 9200
- Catalyst 9300
- Catalyst 9500
- Catalyst 9400
- Catalyst 9600

## Verificar o SPAN

### Diagrama de Rede

### Configuração de SPAN

```
monitor session 1 source interface Twe1/0/1
monitor session 1 destination interface Twe1/0/2
```

**Verifique a configuração do software SPAN.** Anote as interfaces SPAN de origem e destino e a direção da captura de SPAN.

```
C9500-SPAN#show monitor session all
Session 1
-----
Type : Local Session
Source Ports :
    Both : Twe1/0/1
Destination Ports : Twe1/0/2
Encapsulation : Native
Ingress : Disabled
```

**Verifique a entrada de hardware de SPAN.** Use o ID da Sessão FED que é exclusiva por configuração de SPAN. Pode haver até 8 Sessões FED configuradas ao mesmo tempo (de Sessões FED 0 a 7).

```
C9500-SPAN# show platform software monitor session 1
Span Session 1 (FED Session 0):
Type: Local SPAN
Prev type: Local SPAN
Ingress Src Ports: Twe1/0/1      <-- Hardware entry for source interface.
Egress Src Ports:  Twe1/0/1      <-- Hardware entry for source interface.
Ingress Local Src Ports: (null)
Egress Local Src Ports: (null)
Destination Ports:  Twe1/0/2    <-- Hardware entry for destination interface.
Ingress Src Vlans:
```

```

Egress Src Vlans:
Ingress Up Src Vlans: (null)
Egress Up Src Vlans: (null)
Src Trunk filter Vlans:
RSPAN dst vlan: 0
RSPAN src vlan: 0
RSPAN src vlan sav: 0
Dest port encaps = 0x0000
Dest port ingress encaps = 0xFFFFFFFFFFFFFF
Dest port ingress vlan = 0x0
SrcSess: 1 DstSess: 0 DstPortCfgd: 1 RspnDstCfg: 0 RspnSrcVld: 0
DstCliCfg: 0 DstPrtInit: 1 PsLclCfgd: 0
Flags: 0x00000031 PSPAN
Remote dest port: 0 Dest port group: 0
FSPAN disabled
FSPAN not notified

```

**Colete** números de ASIC, Núcleo e Porta para as portas SPAN de origem e destino configuradas. O número da porta é necessário para confirmar se a interface SPAN de origem está programada corretamente e se o SPAN está apontando para a interface SPAN de destino correta.

**Tip:** Use a nomenclatura apropriada para dispositivo autônomo **show platform software/hardware fed ative** ou stack device **show platform software/hardware fed switch <número>**.

```
C9500-SPAN# show platform software fed active ifm mappings
Interface          IF_ID   Inst Asic Core Port SubPort Mac Cntx LPN GPN Type Active
TwentyFiveGigE1/0/1 0x8     1    0   1    20      0    16   4   1   101  NIF  Y
TwentyFiveGigE1/0/2 0x9     1    0   1    21      0    17   5   2   102  NIF  Y
```

O registro **IlePortLeSpanBitMapTable** Doppler é usado para definir se uma porta está sujeita a SPAN na direção de entrada (RX). Para confirmar se a porta SPAN de origem configurada (porta 20 do ASIC) está atribuída à **Sessão FED** direita (Sessão 0):

```
C9500-SPAN# show platform hardware fed active fwd-asic register read register-name
IlePortLeSpanBitMapTable-20 asic 0 core 1
For asic 0 core 1

Module 0 - IlePortLeSpanBitMapTable[0][20]

ssbm : 0x1      -- Convert from Hexadecimal to Binary: 0b00000001. Bit 0 is set.
```

O mapa de bits da sessão de SPAN é um registro de 8 bits. Cada bit corresponde a uma sessão de FED: O bit menos significativo corresponde à Sessão 0 do FED, o bit mais significativo corresponde à Sessão 7 do FED. Assim, o número máximo de Sessões de SPAN suportadas é 8, como mencionado anteriormente.

Se uma interface for configurada como porta de origem de SPAN para várias sessões de SPAN, todas as sessões de FED deverão aparecer no registro SSBM. Por exemplo, SSBM com valor 0x5 (0b00000101) significa que a interface é uma origem de SPAN para a Sessão FED 0 e a Sessão FED 2.

Da mesma forma, o registro Doppler **ElePortLeSpanBitMapTable** determina se uma porta está sujeita a SPAN na direção de saída (TX). A análise é a mesma que o registro **IlePortLeSpanBitMapTable**. Para confirmar se a porta SPAN de origem configurada (porta 20 do ASIC) está atribuída à **Sessão FED** direita (Sessão 0):

```
C9500-SPAN# show platform hardware fed active fwd-asic register read register-name
ElePortLeSpanBitMapTable-20 asic 0 core 1
For asic 0 core 1

Module 0 - ElePortLeSpanBitMapTable[0] [20]

ssbm : 0x1
```

Isso confirma que a interface de SPAN de origem está mapeada para a sessão de alimentação direita para a direção RX e TX.

Com o **ID de sessão de FED**, podemos encontrar a(s) porta(s) de destino para o SPAN dentro do registro Doppler **AqmRepSpanPortMap**. Para confirmar a Sessão 0 do FED aponta para a porta de destino de SPAN direita (porta 21 do ASIC):

```
C9500-SPAN# show platform hardware fed active fwd-asic register read register-name
AqmRepSpanPortMap-0 asic 0 core 1
For asic 0 core 1

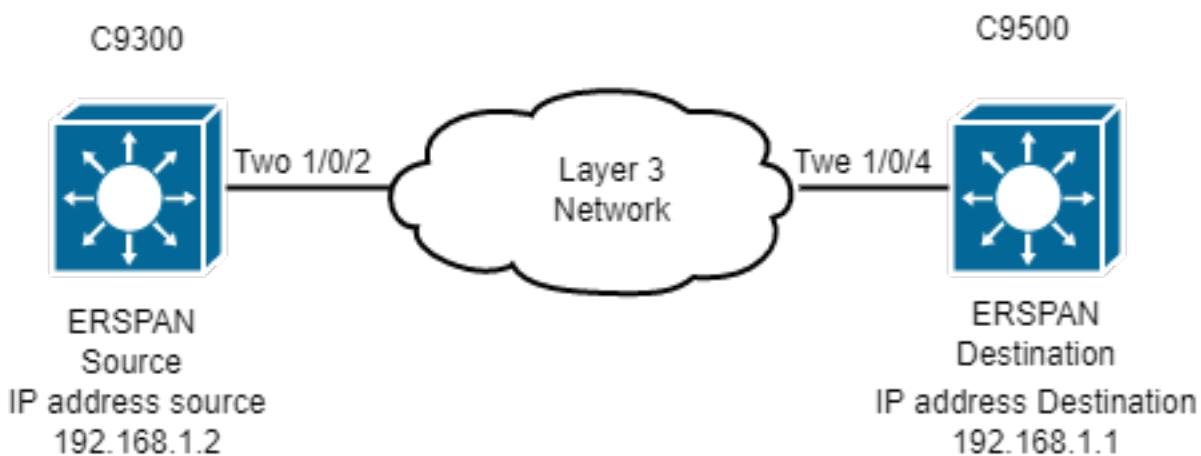

Module 0 - AqmRepSpanPortMap[0] [0]

cpuQueueNum : 0x0
cpuSpanValid : 0x0
indirectApPortMap : 0x0
portMap0 : 0x200000      <-- Convert from Hexadecimal to Binary:
0b00100000000000000000000000. Bit 21 is set.
rcpPortMap : 0x0
spanCtiLo : 0x0
```

Isso confirma que os pacotes capturados com o SPAN devem ser mostrados replicados fora da interface Tw1/0/2 (porta 21 do ASIC). Se houver mais portas de destino de SPAN configuradas, elas serão mostradas no registro **AqmRepSpanPortMap**.

## Verificar o ERSPAN

### Diagrama de Rede

**Note:** O Catalyst C9200 não suporta ERSPAN.

**Note:** É necessária uma licença do DNA-Advantage.

## Configuração de ERSPAN

### ### Source ERSPAN Device ###

```
C9300-ERSPAN# show run | section monitor
monitor session 1 type erspan-source
source vlan 10
destination
  erspan-id 3           <-- ERSPAN id must be identical on source and destination.
  ip address 192.168.1.1 <-- GRE tunnel destination IP (IP addr configured on ERSPAN
destination switch).
  origin ip address 192.168.1.2 <-- GRE tunnel source IP (IP addr configured on ERSPAN source
switch).
```

```
C9300-ERSPAN# show ip interface brief | exclude unassigned
Interface          IP-Address      OK? Method Status
<snip>
Loopback0          192.168.1.2    YES NVRAM   up
                                         Protocol
```

### ### Destination ERSPAN Device ###

```
C9500-ERSPAN# show run | section monitor
monitor session 1 type erspan-destination
destination interface Twel1/0/3
source
  erspan-id 3 <-- ERSPAN id must be identical on source and destination.
  ip address 192.168.1.1 <-- GRE tunnel destination IP (IP addr configured on ERSPAN destination
switch).
```

```
C9500-ERSPAN# show ip interface brief | exclude unassigned
Interface IP-Address OK? Method Status Protocol
<snip>
Loopback0 192.168.1.1 YES NVRAM up up
```

## Dispositivo de Origem

Verifique a acessibilidade entre o IP de origem e de destino.

```
C9300-ERSPAN#ping 192.168.1.1 source 192.168.1.2
Type escape sequence to abort.
Sending 5, 100-byte ICMP Echos to 192.168.1.1, timeout is 2 seconds:
Packet sent with a source address of 192.168.1.2
!!!!!
Success rate is 100 percent (5/5), round-trip min/avg/max = 1/1/2 ms
```

## Programação do Cisco IOS Software

Verifique no software Cisco IOS a entrada para a sessão ERSPAN.

```
C9300-ERSPAN#show monitor session 1
Session 1
-----
Type          : ERSPAN Source Session
Status        : Admin Enabled
```

```

Source VLANs      :
  Both           : 10
Destination IP Address : 192.168.1.1
Destination ERSPAN ID   : 3
Origin IP Address    : 192.168.1.2

```

## Programação SHIM

**Verifique o que o software envia ao hardware do programa (objeto SHIM).**

```

C9300-ERSPAN#show platform software monitor session 1
Span Session 1 (FED Session 0):
