Introduction

Este documento descreve a abordagem para solucionar problemas de Ethernet VPN/Virtual Extensible LAN (EVPN/VxLAN) em uma configuração de vários sites.

Prerequisites

Requirements

A Cisco recomenda que você tenha conhecimento destes tópicos:

- Multiprotocol Label Switching (MPLS) Camada 3 VPN
- Protocolo de gateway de borda multiprotocolo (MP-BGP)
- EVPN

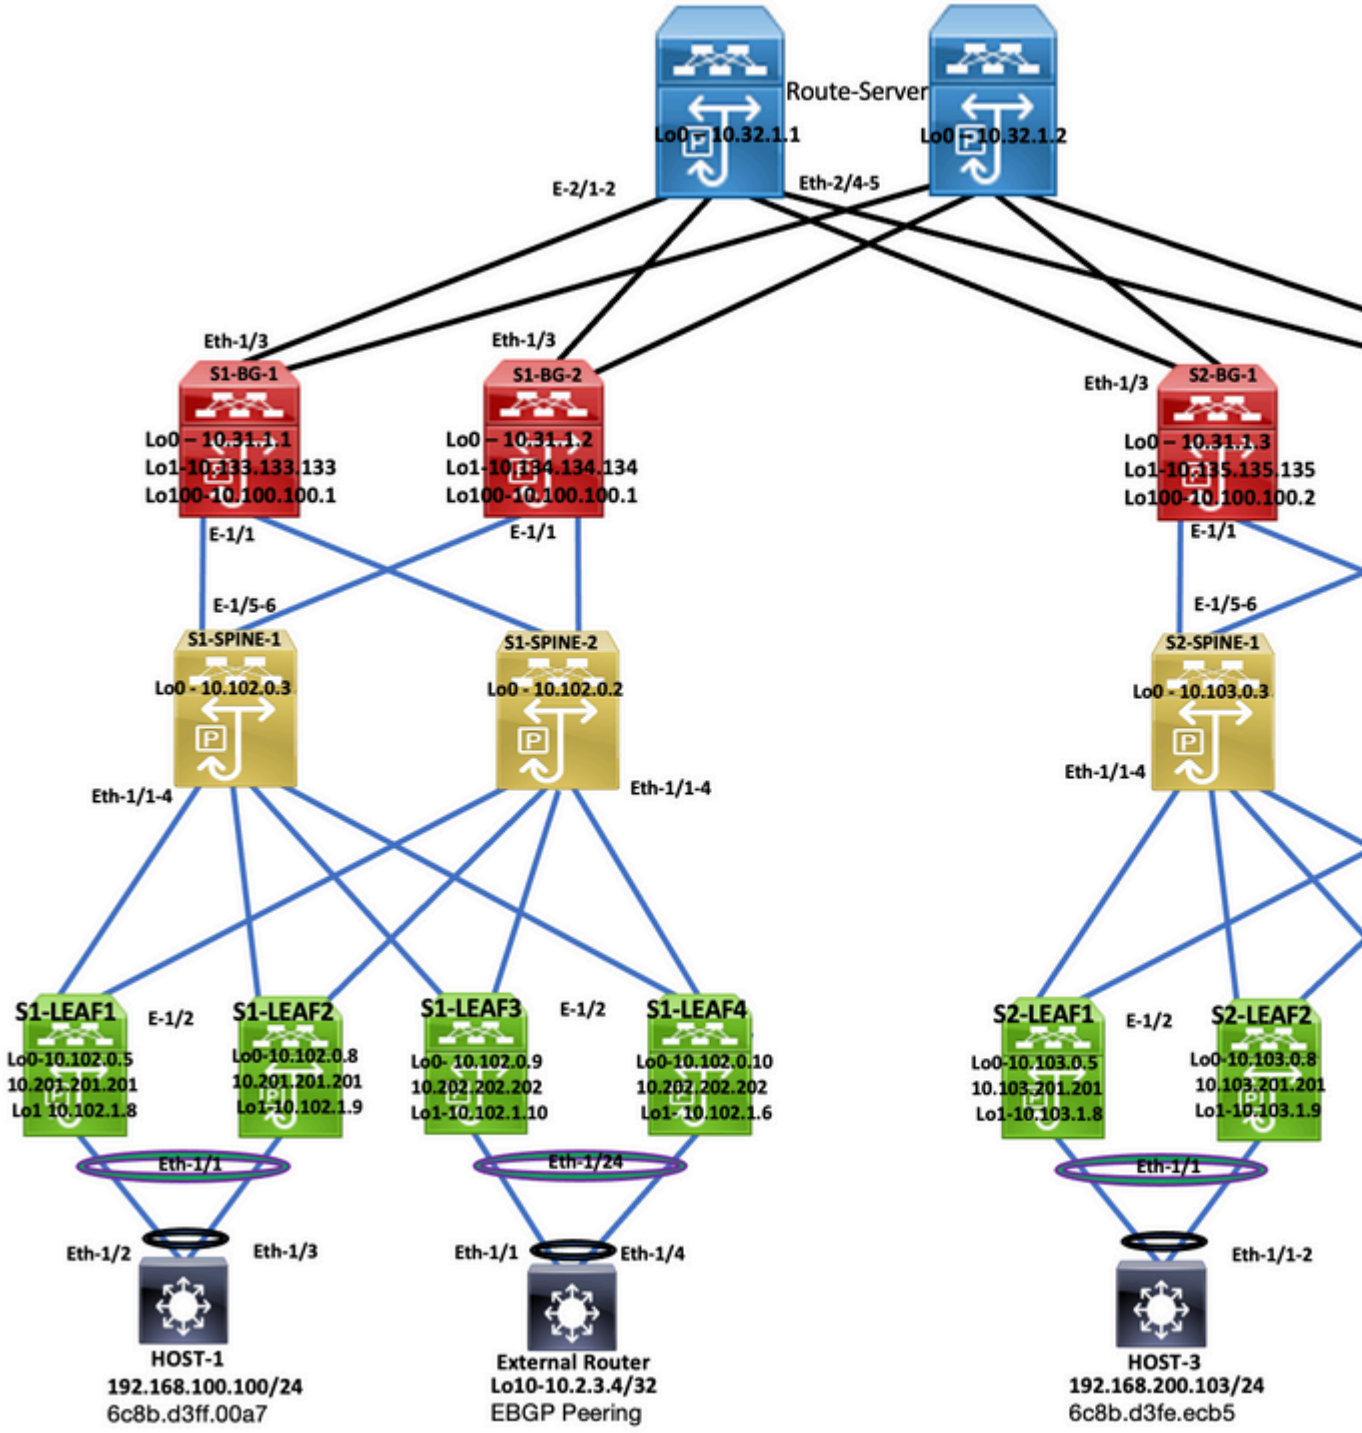
Componentes Utilizados

As informações neste documento são baseadas nestas versões de software e hardware:

Todos os folhetos do site	N9K-C933C-FX2	NXOS: 10.2(3)
S1_Spine1	N9K-C9364C	NXOS: 10.2(4)
S1_Spine2	N9K-C9364C	NXOS: 9.3(5)
S1_Border Gateway1, S2_Border Gateway2, S2_Border Gateway1	N9K-C9332C	NXOS: 9.3(9)
S1_Border Gateway2	N9K-C9332C	NXOS: 10.2(4)
Servidor de Rota	N9K-C9396PX	NXOS: 9.2(2)
Host-1	N3K-C3264C-E	NXOS: 9.3(5)
Host 2 e Host 3	N3K-C3264C-E	NXOS: 9.2(2)

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. Se a rede estiver ativa, certifique-se de que você entenda o impacto potencial de qualquer comando.

Topologia



Topologia

Este documento descreve onde o tráfego é originado do DC-2 Host-3 (192.168.200.104/24) e depois acompanha os pacotes até o DC-1 Host-2 (10.2.3.4) de destino.

Verifique o plano de controle

Para verificar o plano de controle, insira estes comandos:

<#root>

HOST_3#

show ip int brief

```
                      10.100.100.2                       100          0 300 100 65111 i

*>i[5]:[0]:[0]:[32]:[10.100.100.1]/224

O cliente responde que enfrenta problemas de conectividade do Host-3 ao roteador externo. O cliente deseja confirmar se tudo está bem na estrutura VXLAN e precisa de confirmação de que nossa folha encaminha o tráfego para o roteador externo. As etapas para solucionar esse problema são:

1. Inicie um ping em direção ao roteador externo e confirme se o endereço IP 10.2.3.4 pode ser alcançado ou não.
2. Use as capturas do ELAM (Embedded Logic Analyzer Module) em S1-Leaf3 e S1-Leaf4 para ver se ele é acionado (com base na topologia e no fluxo de tráfego).
3. Com a captura ELAM, confirme se o pacote é encaminhado para fora da interface e aponta para o roteador externo.
4. Local 2 - Com o analisador etário, podemos ver a solicitação e a resposta do ICMP. Se não houver uma resposta, o problema está no lado remoto .
5. Se 10.2.3.4 estiver acessível a partir do Host-4 e o Host-3 tiver problemas, pode ser um problema específico do host. Verifique os erros de Lista de Controle de Acesso (ACL - Access Control List), Verificação de Redundância Cíclica (CRC - Cyclic Redundancy Check) e link de hash.

<#root>
