简介

本文档介绍如何在Firepower威胁防御(FTD)上配置和验证基本网络地址转换(NAT)。

先决条件

要求

本文档没有任何特定的要求。

使用的组件

本文档中的信息基于以下软件和硬件版本：

- 运行FTD代码6.1.0-226的ASA5506X
- 运行6.1.0-226的FireSIGHT管理中心(FMC)
- 3台Windows 7主机
- 运行LAN到LAN (L2L) VPN的Cisco IOS® 3925路由器

实验完成时间：1小时

本文档中的信息都是基于特定实验室环境中的设备编写的。本文档中使用的所有设备最初均采用原始（默认）配置。如果您的网络处于活动状态，请确保您了解所有命令的潜在影响。

背景信息

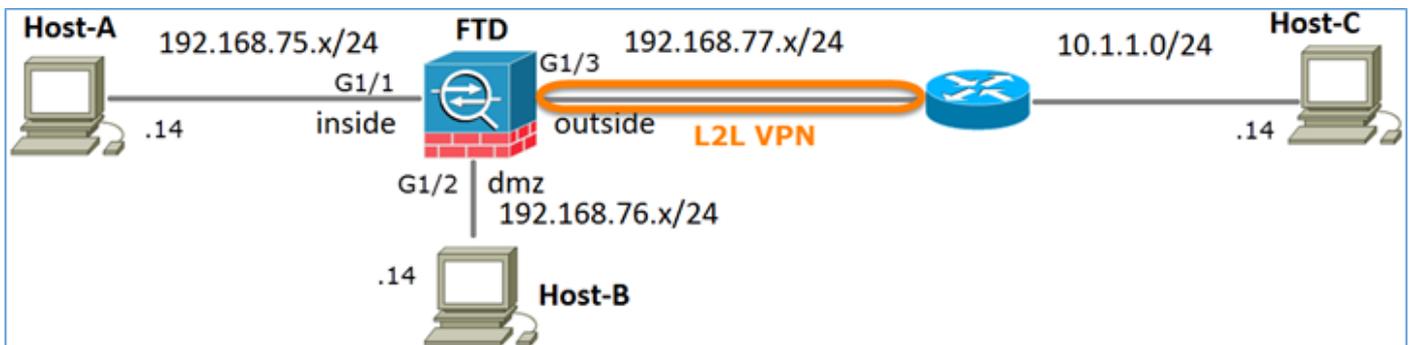

FTD支持与经典自适应安全设备(ASA)相同的NAT配置选项：

- 之前的NAT规则-这相当于传统ASA上的两次NAT (第1部分)。
- 自动NAT规则-关于传统ASA的第2部分
- 之后NAT规则-这相当于在传统ASA上执行两次NAT (第3部分)。

由于FTD配置在NAT配置时从FMC完成，因此必须熟悉FMC GUI和各种配置选项。

配置

网络图

任务1.在FTD上配置静态NAT

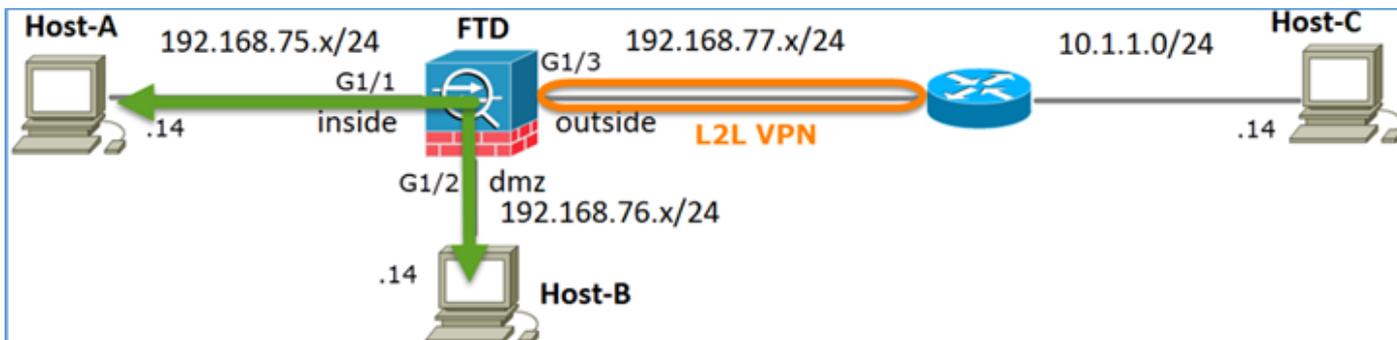

根据以下要求配置NAT：

NAT策略名称	FTD设备的名称
NAT 规则	手动NAT规则
NAT类型	静态
插入	在第1部分
来源接口	内部*
目标接口	dmz*
原始源	192.168.75.14

转换后的源

192.168.76.100

* 为NAT规则使用安全区域

静态 NAT

解决方案：

在传统ASA上，必须在NAT规则中使用nameif。在FTD上，您需要使用安全区域或接口组。

步骤1:将接口分配给安全区域/接口组。

在本任务中，我们决定将用于NAT的FTD接口分配到安全区域。或者，您可以将其分配到接口组，如图所示。

Edit Physical Interface

Mode:

Name: Enabled Management Only

Security Zone:

Description:

General IPv4 IPv6 Advanced Hardware Configuration

MTU: (64 - 9198)

Interface ID:

第二步：结果如图所示。

Interface	Logical Name	Type	Interface Objects	Mac Address(Active/Standby)	IP Address
GigabitEthernet1/1	inside	Physical	inside_zone		192.168.75.6/24(Static)
GigabitEthernet1/2	dmz	Physical	dmz_zone		192.168.76.6/24(Static)
GigabitEthernet1/3	outside	Physical	outside_zone		192.168.77.6/24(Static)

第三步：您可以从对象>对象管理页面创建/编辑接口组和安全区域，如图所示。

Name	Type	Interface Type
dmz_zone	Security Zone	
inside_zone	Security Zone	Routed
outside_zone	Security Zone	Routed

安全区域与接口组

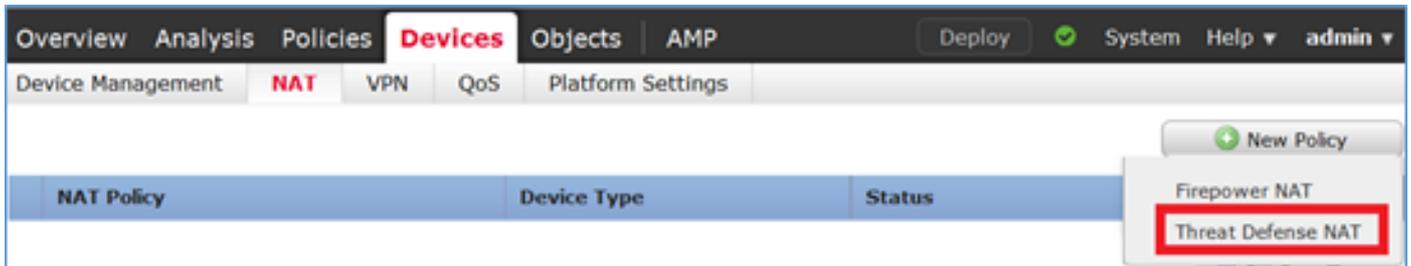

安全区域和接口组之间的主要区别在于，一个接口只能属于一个安全区域，但可以属于多个接口组。因此，实际上，接口组提供了更大的灵活性。

您可以看到内部接口属于两个不同的接口组，但只有一个安全区域，如图所示。

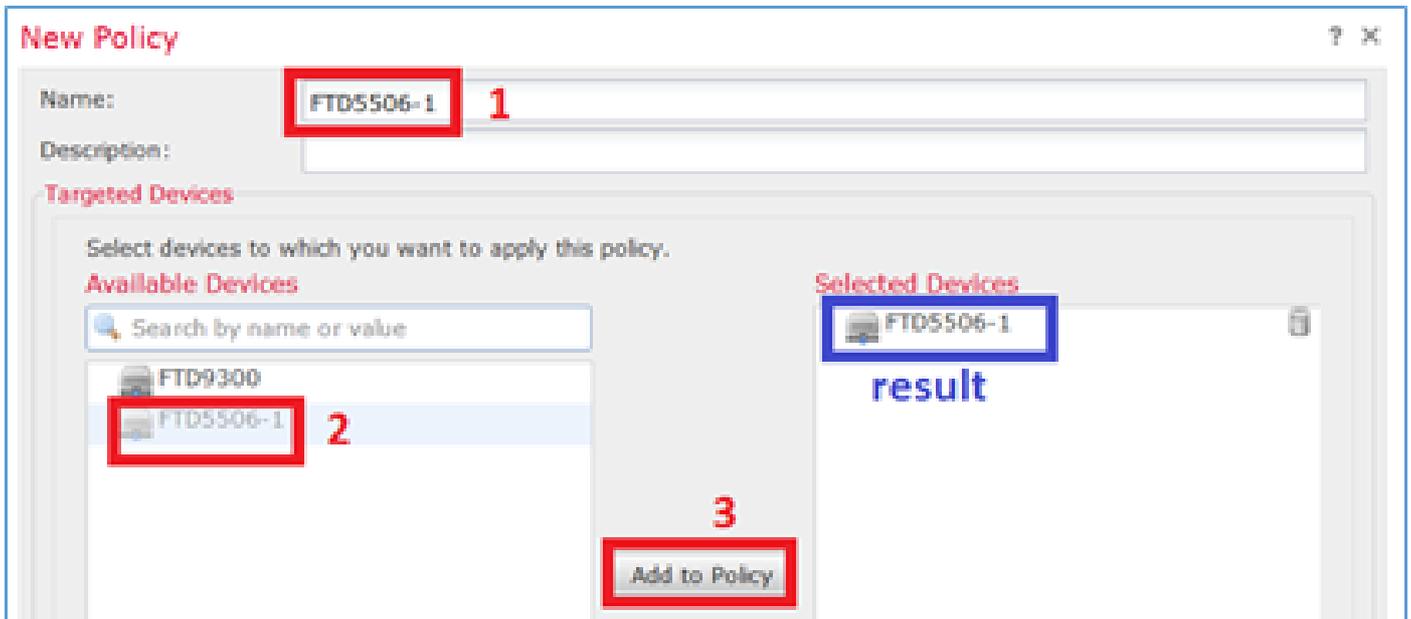

Name	Type	Interface Type
Group1	Interface Group	Routed
FTD5506-1		
inside		
Group2	Interface Group	Routed
FTD5506-1		
inside		
dmz_zone	Security Zone	Routed
FTD5506-1		
dmz		
inside_zone	Security Zone	Routed
FTD5506-1		
inside		
outside_zone	Security Zone	Routed
FTD5506-1		
outside		

第四步：在FTD上配置静态NAT。

导航到设备> NAT并创建NAT策略。选择New Policy > Threat Defense NAT，如图所示。

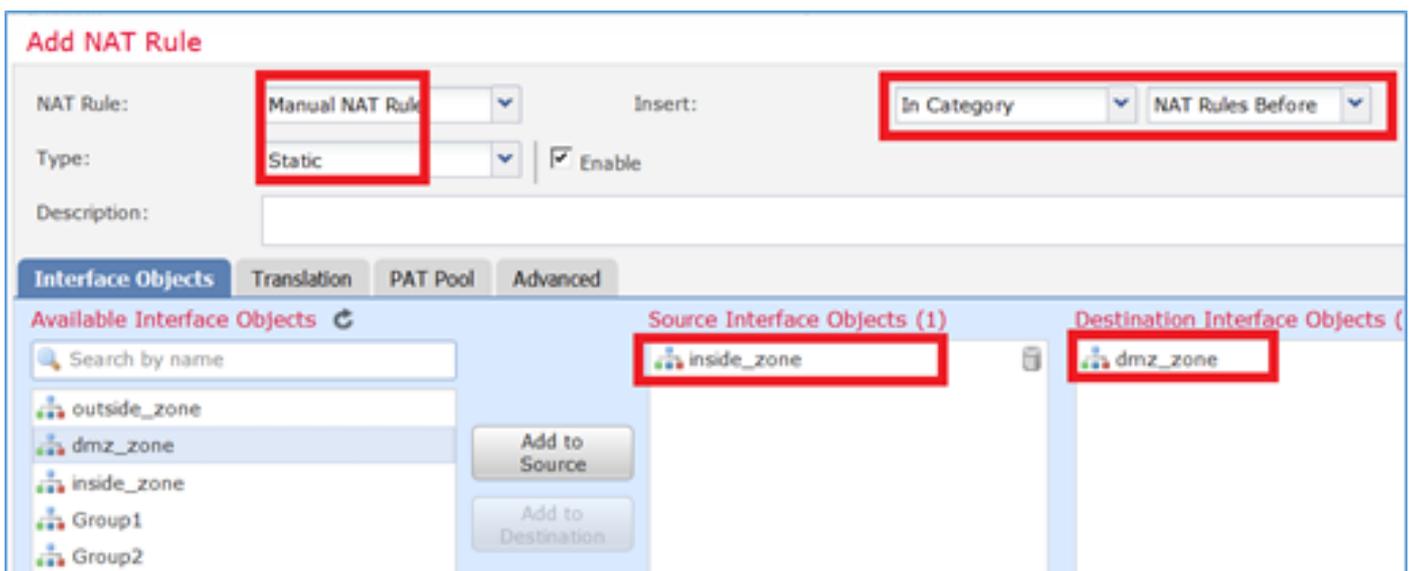

第五步：指定策略名称并将其分配到目标设备，如图所示。

第六步：将NAT规则添加到策略，请点击添加规则。

根据任务要求指定这些要求，如图所示。

主机A = 192.168.75.14

主机B = 192.168.76.100

<#root>

firepower#

show run object

```
object network Host-A
 host 192.168.75.14
object network Host-B
 host 192.168.76.100
```

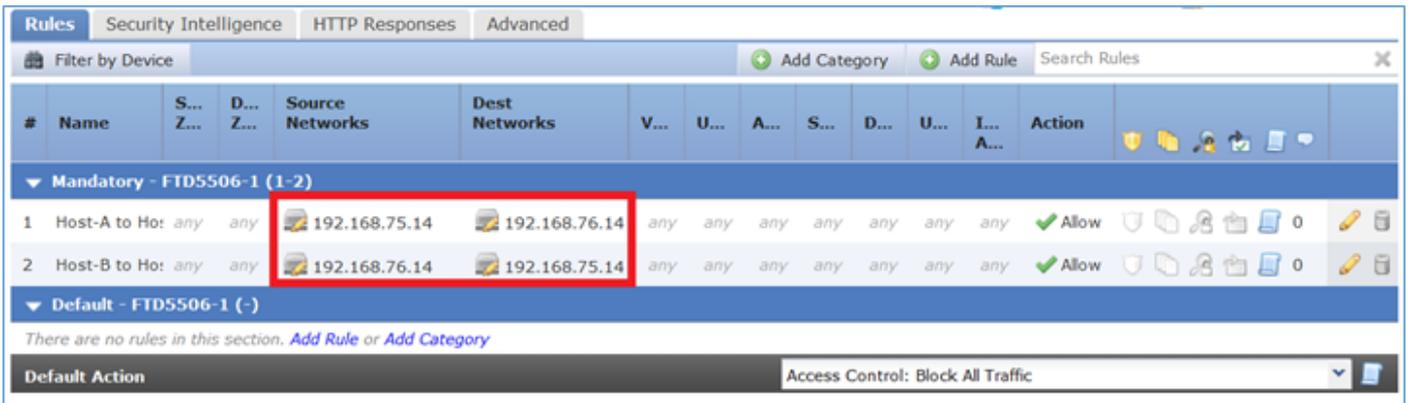

警告：如果配置静态NAT并将接口指定为转换源，则会重定向所有发往该接口IP地址的流量。用户无法访问映射接口上启用的任何服务。此类服务的示例包括路由协议，如OSPF和EIGRP。

步骤 7.结果如图所示。

#	Dire...	Typ	Original Packet			Translated Packet			Options
			Source Interface Obj...	Destination Interface Ob...	Original Sources	Original Destinatio...	Orig...	Translated Sources	
1		Stat	inside_zone	dmz_zone	Host-A		Host-B		Dns:false

步骤 8确保存在允许主机B访问主机A的访问控制策略，反之亦然。请记住，静态NAT在默认情况下

是双向的。与传统ASA类似，请参阅实际IP的用法。这是预期结果，因为在本实验中，LINA运行9.6.1.x代码（如图所示）。

#	Name	S... Z...	D... Z...	Source Networks	Dest Networks	V...	U...	A...	S...	D...	U...	I... A...	Action	
▼ Mandatory - FTD5506-1 (1-2)														
1	Host-A to Ho:	any	any	192.168.75.14	192.168.76.14	any	✓ Allow	0						
2	Host-B to Ho:	any	any	192.168.76.14	192.168.75.14	any	✓ Allow	0						
▼ Default - FTD5506-1 (-)														
There are no rules in this section. Add Rule or Add Category														
Default Action													Access Control: Block All Traffic	

验证：

从LINA CLI：

```
<#root>
```

```
firepower#
```

```
show run nat
```

```
nat (inside,dmz) source static Host-A Host-B
```

按预期在第1部分插入NAT规则：

```
<#root>
```

```
firepower#
```

```
show nat
```

```
Manual NAT Policies
```

```
(Section 1)
```

```
1 (inside) to (dmz) source static Host-A Host-B
```

```
translate_hits = 0, untranslate_hits = 0
```

 注意：在后台创建的2个xlate。

```
<#root>
```

```
firepower#
```

```
show xlate
```

```
2 in use, 4 most used
```

Flags: D - DNS, e - extended,
I - identity
, i - dynamic, r - portmap,

s - static, T - twice

, N - net-to-net
NAT from inside:192.168.75.14 to dmz:192.168.76.100
flags sT idle 0:41:49 timeout 0:00:00
NAT from dmz:0.0.0.0/0 to inside:0.0.0.0/0
flags sIT idle 0:41:49 timeout 0:00:00

src mac=0000.0000.0000, mask=0000.0000.0000
dst mac=0000.0000.0000, mask=0000.0000.0000
input_ifc=inside, output_ifc=any

Result:
input-interface: inside
input-status: up
input-line-status: up
output-interface: inside
output-status: up
output-line-status: up
Action: allow
1 packet shown

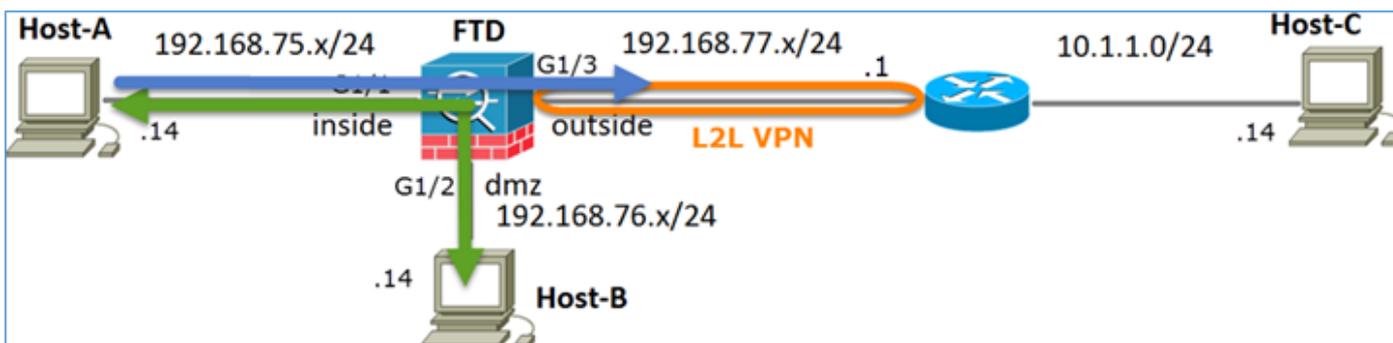

任务2.在FTD上配置端口地址转换(PAT)

根据以下要求配置NAT：

NAT 规则	手动NAT规则
NAT类型	动态
插入	在第1部分
来源接口	内部*

目标接口	外部*
原始源	192.168.75.0/24
转换后的源	外部接口(PAT)

* 为NAT规则使用安全区域

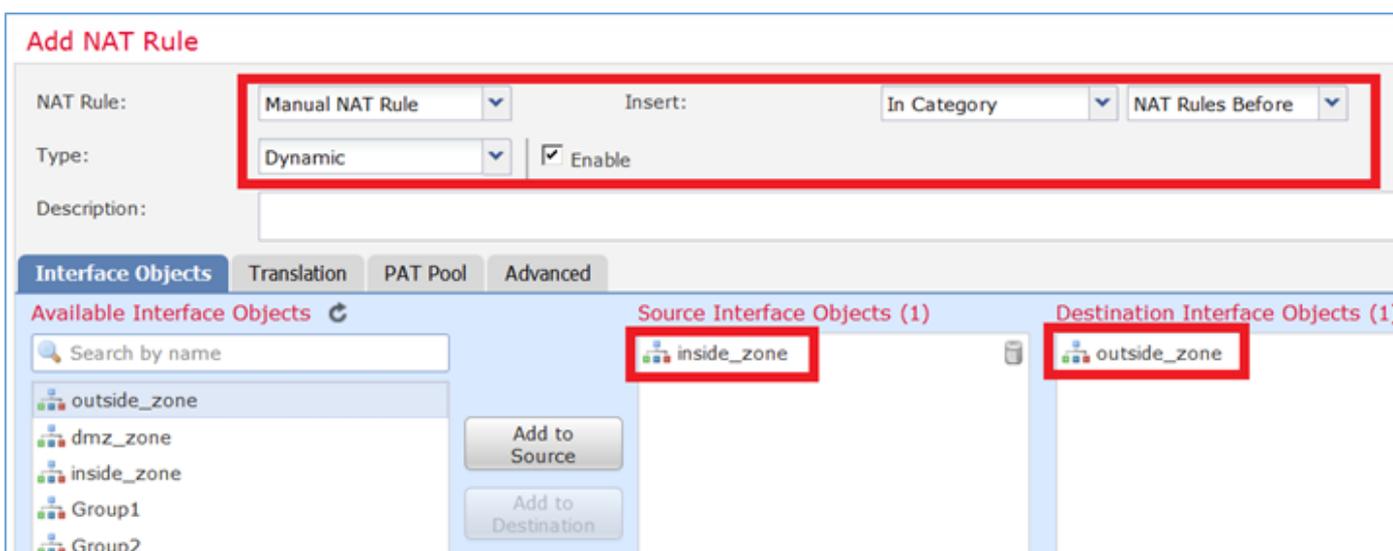

静态 NAT

PAT

解决方案：

步骤1:添加第二个NAT规则并根据任务要求进行配置，如图所示。

第二步：以下是PAT的配置方式（如图所示）。

Add NAT Rule ?

NAT Rule: Insert:

Type: Enable

Description:

Interface Objects **Translation** PAT Pool Advanced

Original Packet

Original Source: * +

Original Destination: +

Original Source Port: +

Original Destination Port: +

Translated Packet

Translated Source: +
The values selected for Destination Interface Objects in 'Interface Objects' tab will be used

Translated Destination: +

Translated Source Port: +

Translated Destination Port: +

第三步：结果如图所示。

Rules Filter by Device

#	Direction	T...	Original Packet			Translated Packet			Options
			Source Interface Objects	Destination Interface Objects	Original Sources	Original Destinations	Original Services	Translated Sources	
NAT Rules Before									
1	St...		inside_zone	dmz_zone	Host-A			Host-B	Dns:false
2	D...		inside_zone	outside_zone	Net_192.168.75.0_24bits			Interface	Dns:false
Auto NAT Rules									
NAT Rules After									

第四步：在本实验的其余部分，将访问控制策略配置为允许所有流量通过。

验证：

NAT 配置:

<#root>

firepower#

show nat

Manual NAT Policies (Section 1)

1 (inside) to (dmz) source static Host-A Host-B
 translate_hits = 26, untranslate_hits = 26

2 (inside) to (outside) source dynamic Net_192.168.75.0_24bits interface
 translate_hits = 0, untranslate_hits = 0

在LINA CLI中记下新条目：

<#root>

firepower#

```
show xlate
```

```
3 in use, 19 most used
Flags: D - DNS, e - extended, I - identity, i - dynamic, r - portmap,
      s - static, T - twice, N - net-to-net
NAT from inside:192.168.75.14 to dmz:192.168.76.100
    flags sT idle 1:15:14 timeout 0:00:00
NAT from dmz:0.0.0.0/0 to inside:0.0.0.0/0
    flags sIT idle 1:15:14 timeout 0:00:00

NAT from outside:0.0.0.0/0 to inside:0.0.0.0/0
    flags sIT idle 0:04:02 timeout 0:00:00
```

在内部和外部接口上启用捕获。在内部捕获上启用跟踪：

```
<#root>
```

```
firepower#
```

```
capture CAPI trace interface inside match ip host 192.168.75.14 host 192.168.77.1
```

```
firepower#
```

```
capture CAPO interface outside match ip any host 192.168.77.1
```

从Host-A (192.168.75.14)对IP 192.168.77.1执行ping操作，如图所示。

```
C:\Windows\system32>ping 192.168.77.1

Pinging 192.168.77.1 with 32 bytes of data:
Reply from 192.168.77.1: bytes=32 time=1ms TTL=255

Ping statistics for 192.168.77.1:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 1ms, Maximum = 1ms, Average = 1ms
```

在LINA捕获中，您可以看到PAT转换：

```
<#root>
```

```
firepower#
```

```
show cap CAPI
```

```
8 packets captured
  1: 18:54:43.658001
```

```
192.168.75.14 > 192.168.77.1
```

```
: icmp: echo request
```

```
2: 18:54:43.659099      192.168.77.1 > 192.168.75.14: icmp: echo reply
3: 18:54:44.668544      192.168.75.14 > 192.168.77.1: icmp: echo request
4: 18:54:44.669505      192.168.77.1 > 192.168.75.14: icmp: echo reply
5: 18:54:45.682368      192.168.75.14 > 192.168.77.1: icmp: echo request
6: 18:54:45.683421      192.168.77.1 > 192.168.75.14: icmp: echo reply
7: 18:54:46.696436      192.168.75.14 > 192.168.77.1: icmp: echo request
8: 18:54:46.697412      192.168.77.1 > 192.168.75.14: icmp: echo reply
```

<#root>

firepower#

show cap CAPO

8 packets captured

1: 18:54:43.658672

192.168.77.6 > 192.168.77.1

: icmp: echo request

```
2: 18:54:43.658962      192.168.77.1 > 192.168.77.6: icmp: echo reply
3: 18:54:44.669109      192.168.77.6 > 192.168.77.1: icmp: echo request
4: 18:54:44.669337      192.168.77.1 > 192.168.77.6: icmp: echo reply
5: 18:54:45.682932      192.168.77.6 > 192.168.77.1: icmp: echo request
6: 18:54:45.683207      192.168.77.1 > 192.168.77.6: icmp: echo reply
7: 18:54:46.697031      192.168.77.6 > 192.168.77.1: icmp: echo request
8: 18:54:46.697275      192.168.77.1 > 192.168.77.6: icmp: echo reply
```

突出显示了重要部分的数据包的踪迹：

<#root>

firepower#

show cap CAPI packet-number 1 trace

  input_ifc=inside, output_ifc=outside

```

任务3.在FTD上配置NAT免除

根据以下要求配置NAT：

NAT 规则	手动NAT规则
NAT类型	静态
插入	在第1部分，所有现有规则

来源接口	内部*
目标接口	外部*
原始源	192.168.75.0/24
转换后的源	192.168.75.0/24
原始目标	10.1.1.0/24
转换后的目标	10.1.1.0/24

* 为NAT规则使用安全区域

静态 NAT

PAT

NAT免除

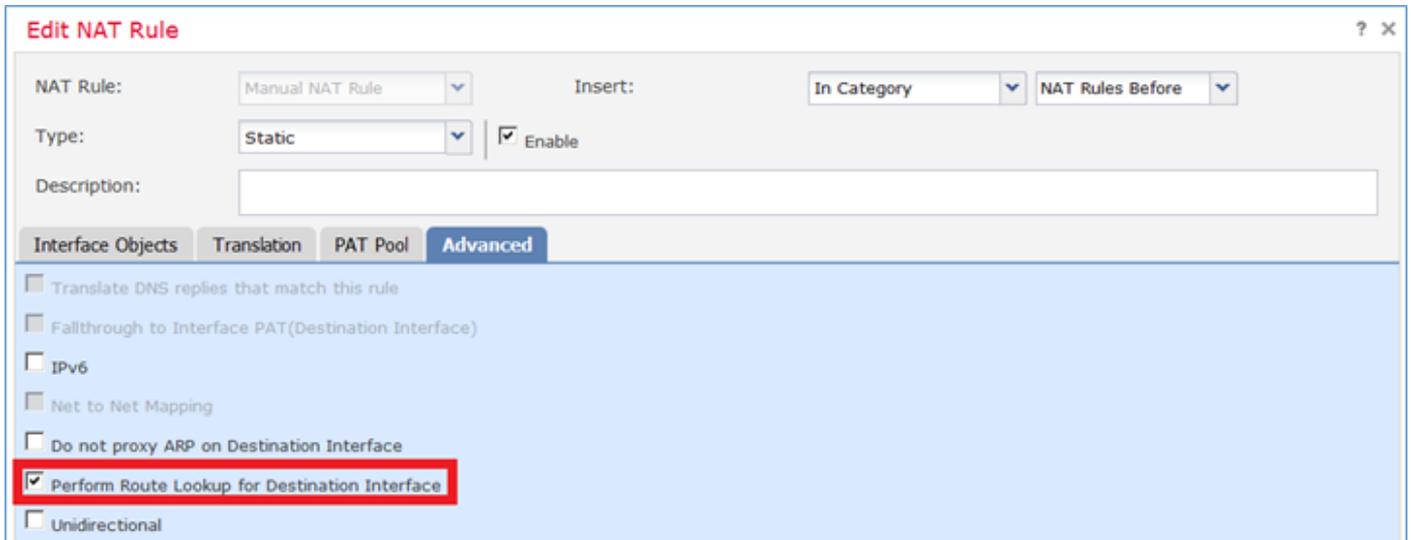

解决方案：

步骤1:添加第三条NAT规则并按任务要求进行配置，如图所示。

Rules										
Filter by Device										
Original Packet										
Translated Packet										
#	Direction	Ty...	Source Interface O...	Destination Interface Obj...	Original Sources	Original Destinations	Original Services	Translated Sources	Translated Destinations	Translated Services
▼ NAT Rules Before										
1	→	Sta...	inside_zone	outside_zone	Net_192.168.75.0_24bits	net_10.1.1.0_24bits		Net_192.168.75.0_24b	net_10.1.1.0_24bits	
2	→	Sta...	inside_zone	dmz_zone	Host-A			Host-B		
3	→	Dy...	inside_zone	outside_zone	Net_192.168.75.0_24bits			Interface		
▼ Auto NAT Rules										
▼ NAT Rules After										

第二步：执行路由查找以确定出口接口。

 注意：对于身份NAT规则（如您添加的规则），您可以更改确定出口接口的方式并使用常规路由查找（如图所示）。

The screenshot shows the 'Edit NAT Rule' configuration window. The 'Advanced' tab is selected, and the checkbox 'Perform Route Lookup for Destination Interface' is checked and highlighted with a red box. Other options include 'Translate DNS replies that match this rule', 'Fallthrough to Interface PAT(Destination Interface)', 'IPv6', 'Net to Net Mapping', 'Do not proxy ARP on Destination Interface', and 'Unidirectional'.

验证：

```
<#root>
```

```
firepower#
```

```
show run nat
```

```
nat (inside,outside) source static Net_192.168.75.0_24bits Net_192.168.75.0_24bits destination static ne
```

```
nat (inside,dmz) source static Host-A Host-B
```

```
nat (inside,outside) source dynamic Net_192.168.75.0_24bits interface
```

```
<#root>
```

```
firepower#
```

```
show nat
```

```
Manual NAT Policies (Section 1)
```

```
1 (inside) to (outside) source static Net_192.168.75.0_24bits Net_192.168.75.0_24bits destination stati
   translate_hits = 0, untranslate_hits = 0
```

```
2 (inside) to (dmz) source static Host-A Host-B
   translate_hits = 26, untranslate_hits = 26
```

```
3 (inside) to (outside) source dynamic Net_192.168.75.0_24bits interface
   translate_hits = 96, untranslate_hits = 138
```

对源自内部网络的非VPN流量运行Packet Tracer。PAT规则按预期使用：

<#root>

firepower#

packet-tracer input inside tcp 192.168.75.14 1111 192.168.77.1 80

NAT命中计数验证：

<#root>

firepower#

show nat

Manual NAT Policies (Section 1)

1 (inside) to (outside) source static Net_192.168.75.0_24bits Net_192.168.75.0_24bits destination static
translate_hits = 9, untranslate_hits = 9

2 (inside) to (dmz) source static Host-A Host-B
translate_hits = 26, untranslate_hits = 26

3 (inside) to (outside) source dynamic Net_192.168.75.0_24bits interface
translate_hits = 98, untranslate_hits = 138

任务4.在FTD上配置对象NAT

根据以下要求配置NAT：

NAT 规则	自动NAT规则
NAT类型	静态
插入	在第2部分
来源接口	内部*
目标接口	dmz*
原始源	192.168.75.99
转换后的源	192.168.76.99

转换与此规则匹配的DNS回复

启用

* 为NAT规则使用安全区域

解决方案：

步骤1:根据任务要求配置规则，如图所示。

Add NAT Rule

NAT Rule: Auto NAT Rule
Type: Static Enable

Interface Objects Translation PAT Pool Advanced

Available Interface Objects

- outside_zone
- dmz_zone
- inside_zone
- Group1
- Group2

Source Interface Objects (1): inside_zone

Destination Interface Objects (1): dmz_zone

Buttons: Add to Source, Add to Destination

Add NAT Rule ? x

NAT Rule: Auto NAT Rule
Type: Static Enable

Interface Objects Translation PAT Pool Advanced

Original Packet

Original Source:* obj-192.168.75.99

Original Port: TCP

Translated Packet

Translated Source: obj-192.168.76.99

Translated Port:

Add NAT Rule

NAT Rule:

Auto NAT Rule

Type:

Static

Enable

Interface Objects

Translation

PAT Pool

Advanced

Translate DNS replies that match this rule

Falthrough to Interface PAT(Destination Interface)

IPv6

Net to Net Mapping

Do not proxy ARP on Destination Interface

Perform Route Lookup for Destination Interface

第二步：结果如图所示。

Rules										
Filter by Device										
#	Direction	Ty...	Original Packet				Translated Packet			
			Source Interface O...	Destination Interface Obj...	Original Sources	Original Destinations	Original Services	Translated Sources	Translated Destinations	Translated Services
▼ NAT Rules Before										
1		Sta...	inside_zone	outside_zone	Net_192.168.75.0_24bits	net_10.1.1.0_24bits		Net_192.168.75.0_24b	net_10.1.1.0_24bits

Action: allow

任务5.在FTD上配置PAT池

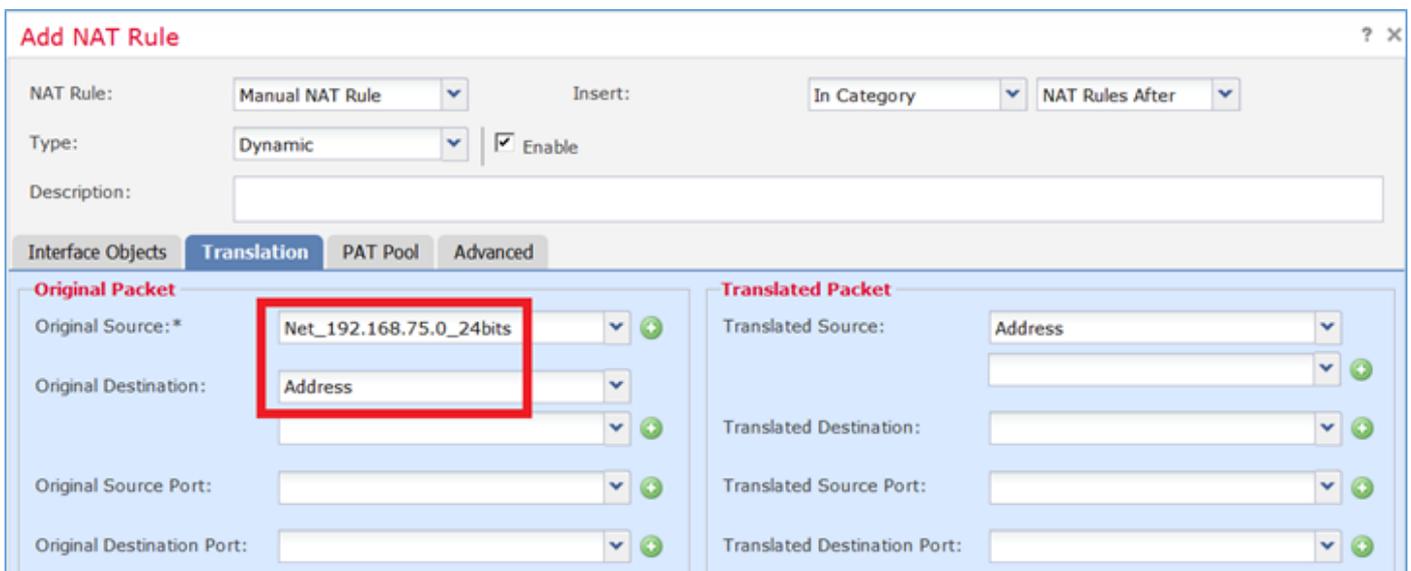

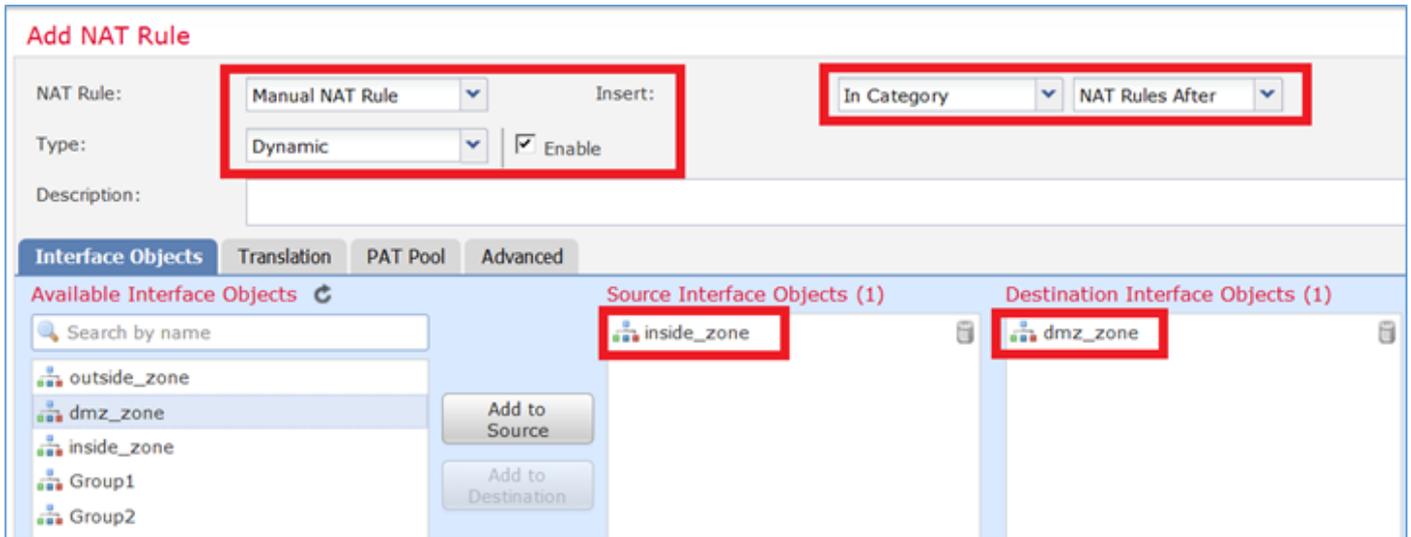

根据以下要求配置NAT：

NAT 规则	手动NAT规则
NAT类型	动态
插入	在第3部分
来源接口	内部*
目标接口	dmz*
原始源	192.168.75.0/24
转换后的源	192.168.76.20-22
使用整个范围(1-65535)	启用

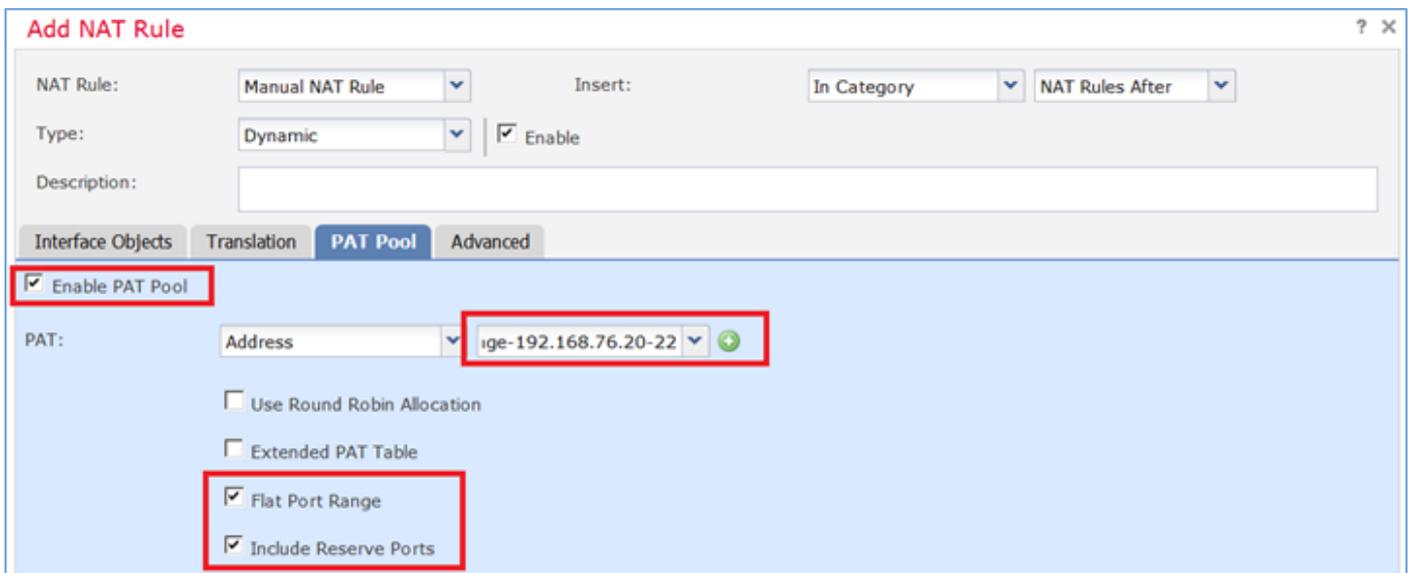

* 为NAT规则使用安全区域

解决方案：

步骤1:根据任务要求配置规则，如图所示。

第二步：使用Include Reserver Ports 启用Flat Port Range ，允许使用整个范围(1-65535)（如图所示）。

第三步：结果如图所示。

#	Direction	T...	Source Interface ...	Destination Interface Ob...	Original Packet		Translated Packet			Options
					Original Sources	Original Destinations	Translated Sources	Translated Destinations	Translated Services	
▼ NAT Rules Before
