简介

本文档介绍如何使用Mobility Express控制器和外部远程身份验证拨入用户服务(RADIUS)服务器设置WLAN (无线局域网)，并使用Wi-Fi保护访问2(WPA2)企业安全。身份服务引擎(ISE)用作外部RADIUS服务器的示例。

本指南中使用的可扩展身份验证协议(EAP)是受保护的可扩展身份验证协议(PEAP)。此外，客户端被分配到特定VLAN (默认情况下，除分配给WLAN的VLAN外)。

先决条件

要求

Cisco 建议您了解以下主题：

- 802.1x
- PEAP
- 认证中心(CA)
- 证书

使用的组件

本文档中的信息基于以下软件和硬件版本：

ME v8.2

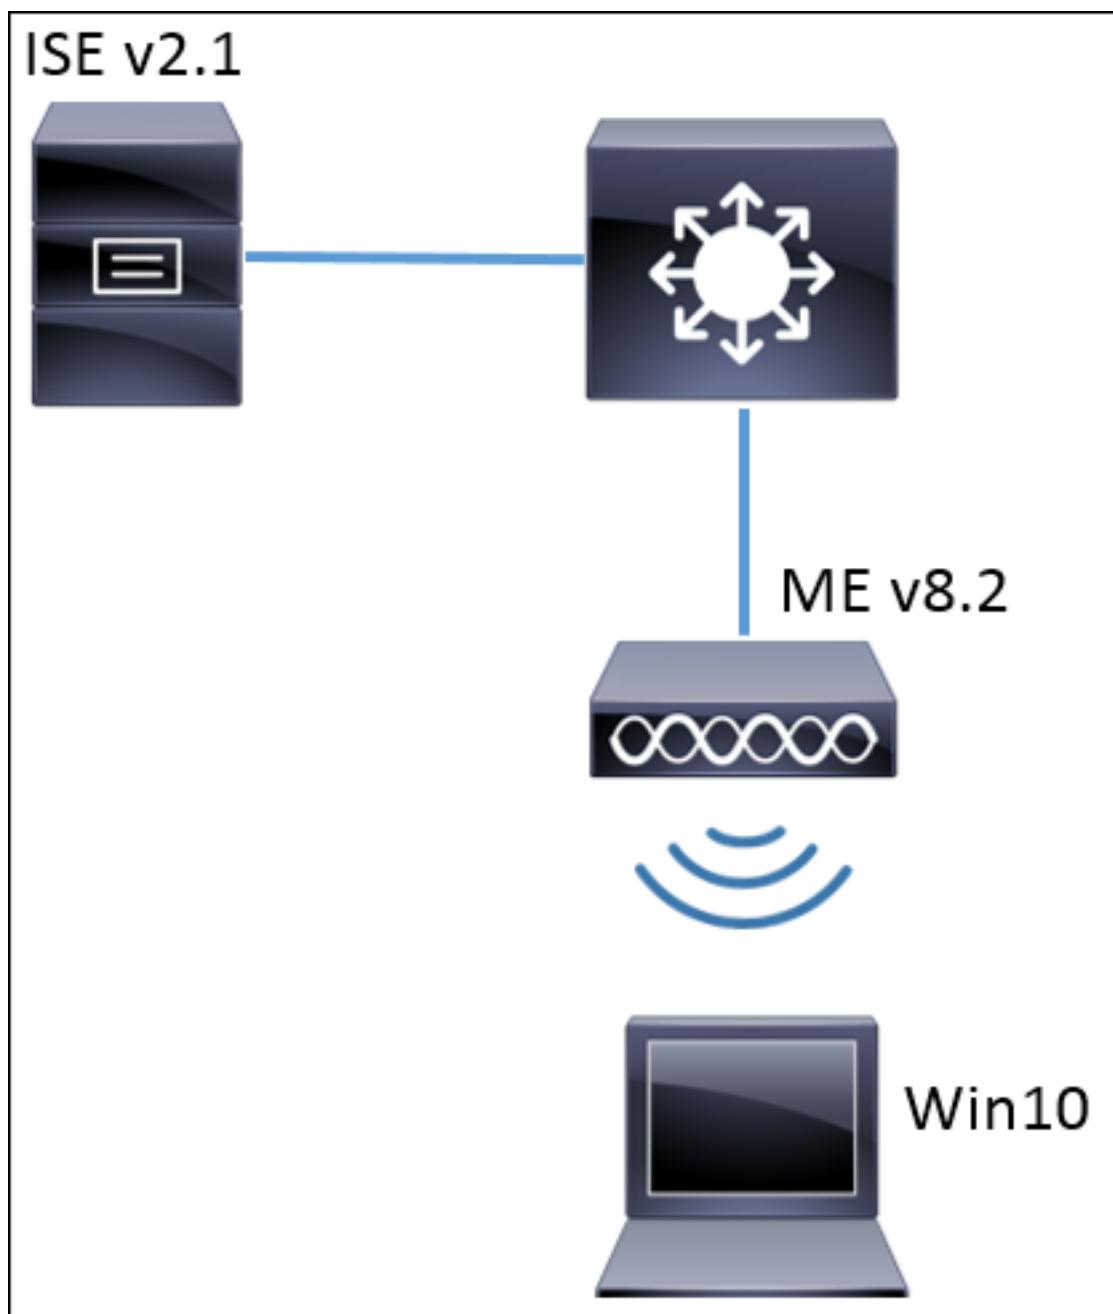

ISE v2.1

Windows 10笔记本电脑

本文档中的信息都是基于特定实验室环境中的设备编写的。本文档中使用的所有设备最初均采用原始（默认）配置。如果您使用的是真实网络，请确保您已经了解所有命令的潜在影响。

配置

网络图

配置

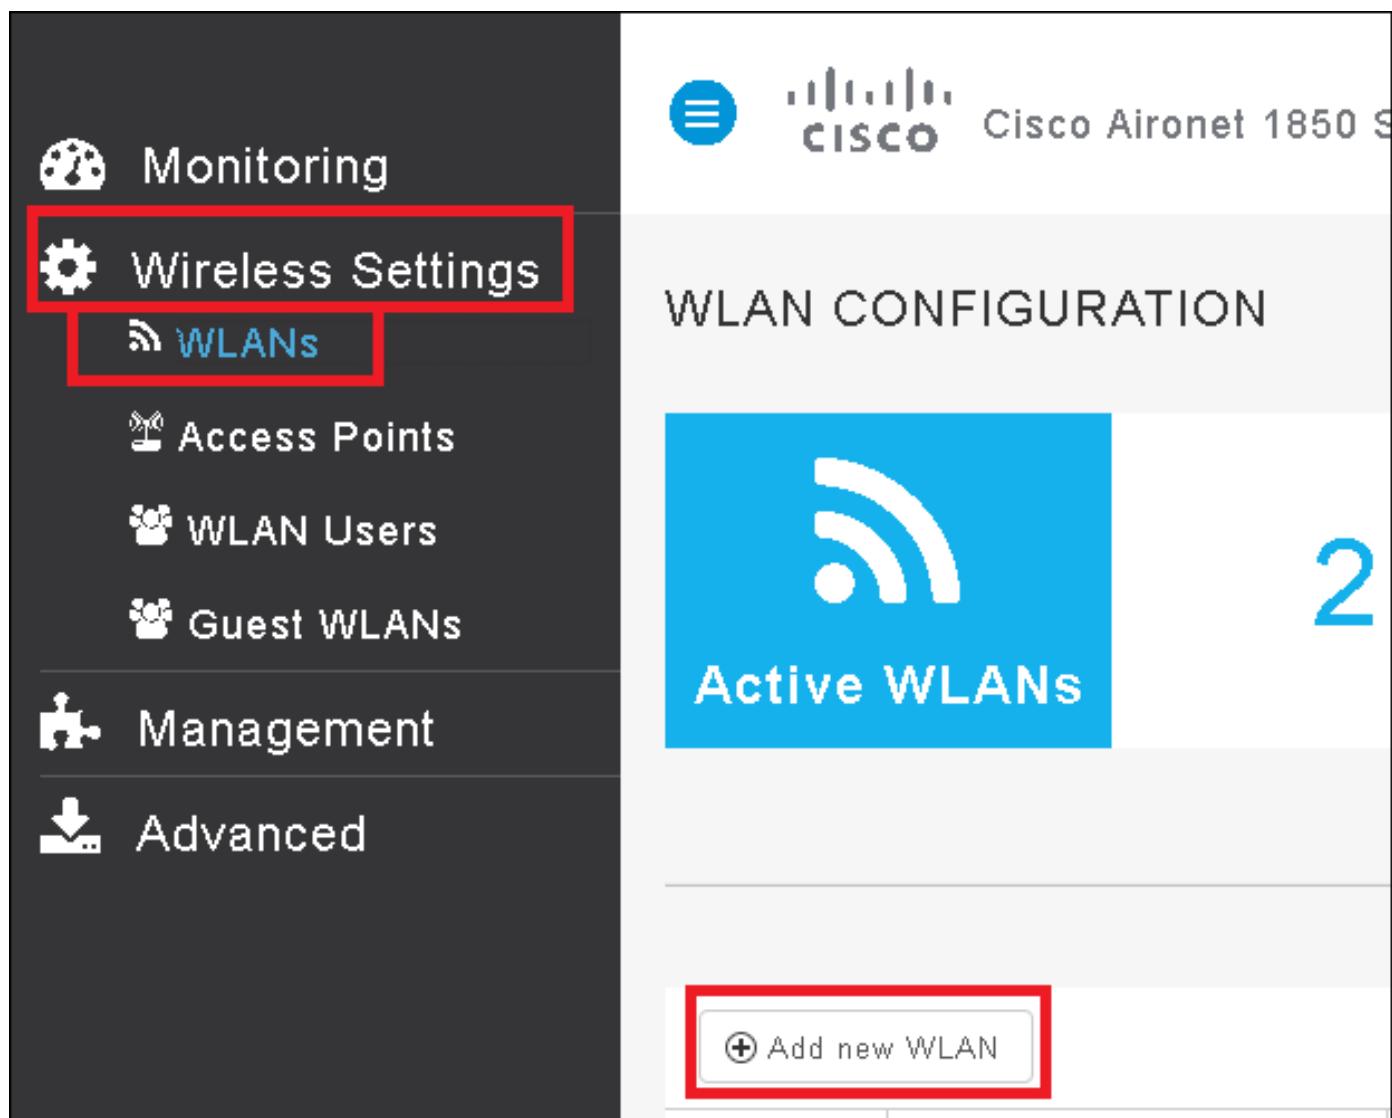

一般步骤为：

1. 在ME中创建服务集标识符(SSID) , 并在ME上声明RADIUS服务器 (本示例中为ISE)
2. 在RADIUS服务器(ISE)上声明ME
3. 在ISE上创建身份验证规则
4. 在ISE上创建授权规则
5. 配置终端

ME上的配置

为了允许RADIUS服务器与ME之间的通信 , 需要在ME上注册RADIUS服务器 , 反之亦然。此步骤显示如何在ME上注册RADIUS服务器。

步骤1. 打开ME的GUI并导航至 无线设置> WLANs >添加新WLAN。

步骤2. 为WLAN选择名称。

Add New WLAN

X

General WLAN Security VLAN & Firewall QoS

WLAN Id 3 ▾

Profile Name * me-ise

SSID * me-ise

Admin State Enabled ▾

Radio Policy ALL ▾

Apply Cancel

This screenshot shows a configuration dialog for adding a new WLAN profile. The 'General' tab is selected. The 'Profile Name' field contains 'me-ise'. The 'SSID' field also contains 'me-ise'. The 'Admin State' is set to 'Enabled'. The 'Radio Policy' is set to 'ALL'. At the bottom, there are 'Apply' and 'Cancel' buttons.

步骤3.在“WLAN安全”选项卡下指定安全配置。

选择WPA2 Enterprise，对于Authentication server，选择External RADIUS。单击编辑选项以添加RADIUS的IP地址并选择共享密钥密钥。

Add New WLAN

X

Authentication Server

External Radius ▾

Radius IP ▲

1812

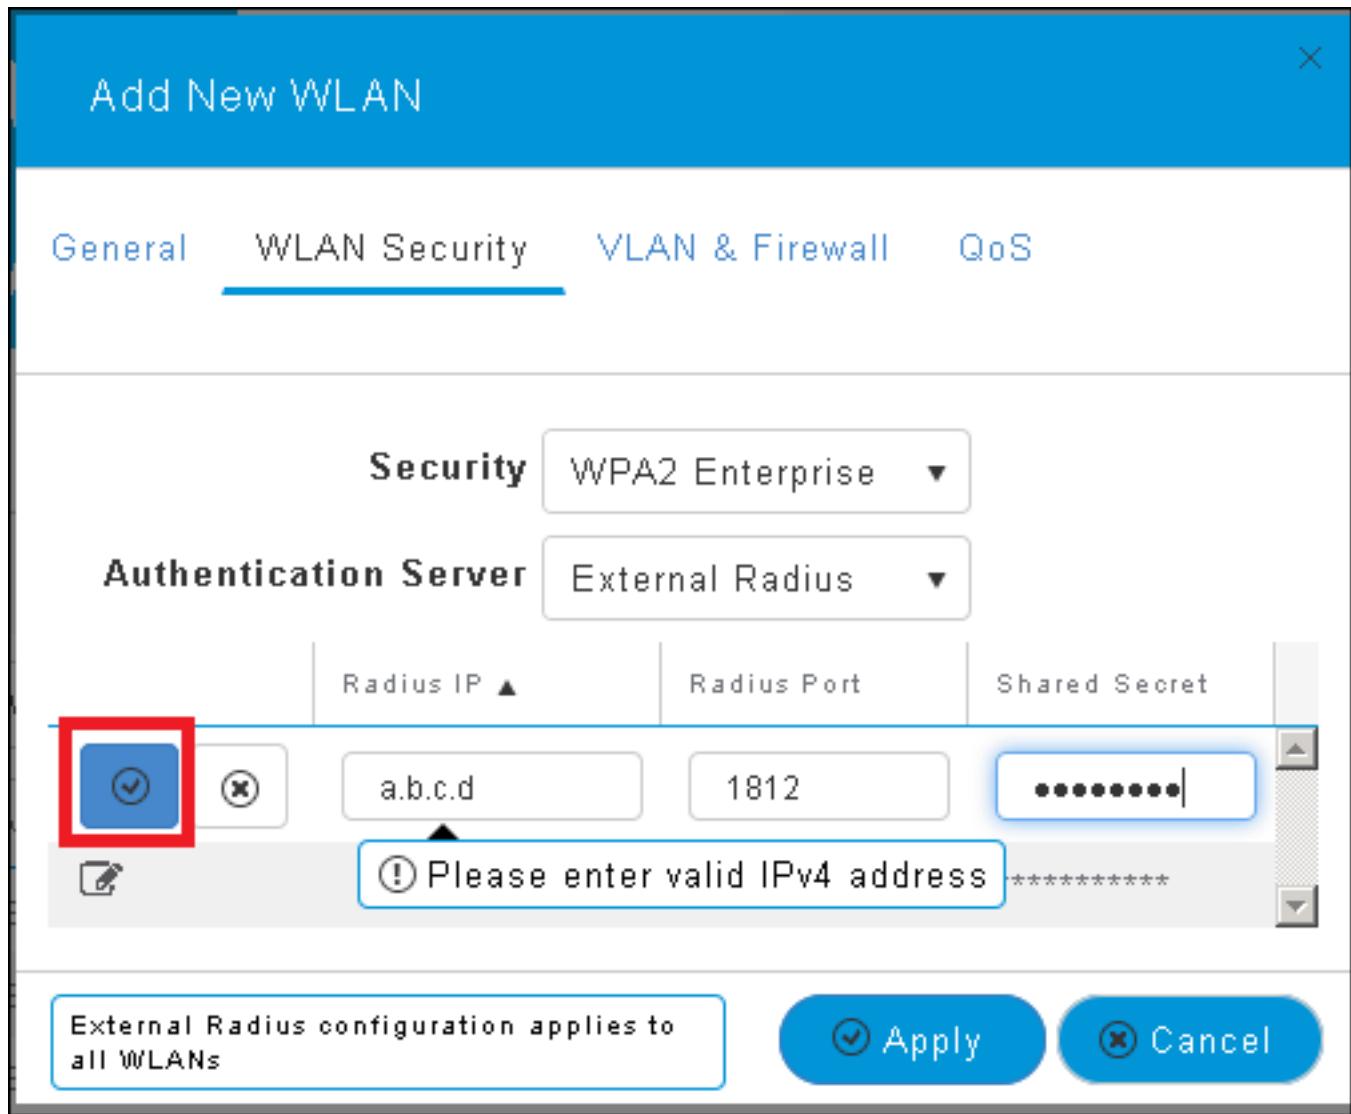

Shared Secret

External Radius configuration applies to
all WLANs

Apply

Cancel

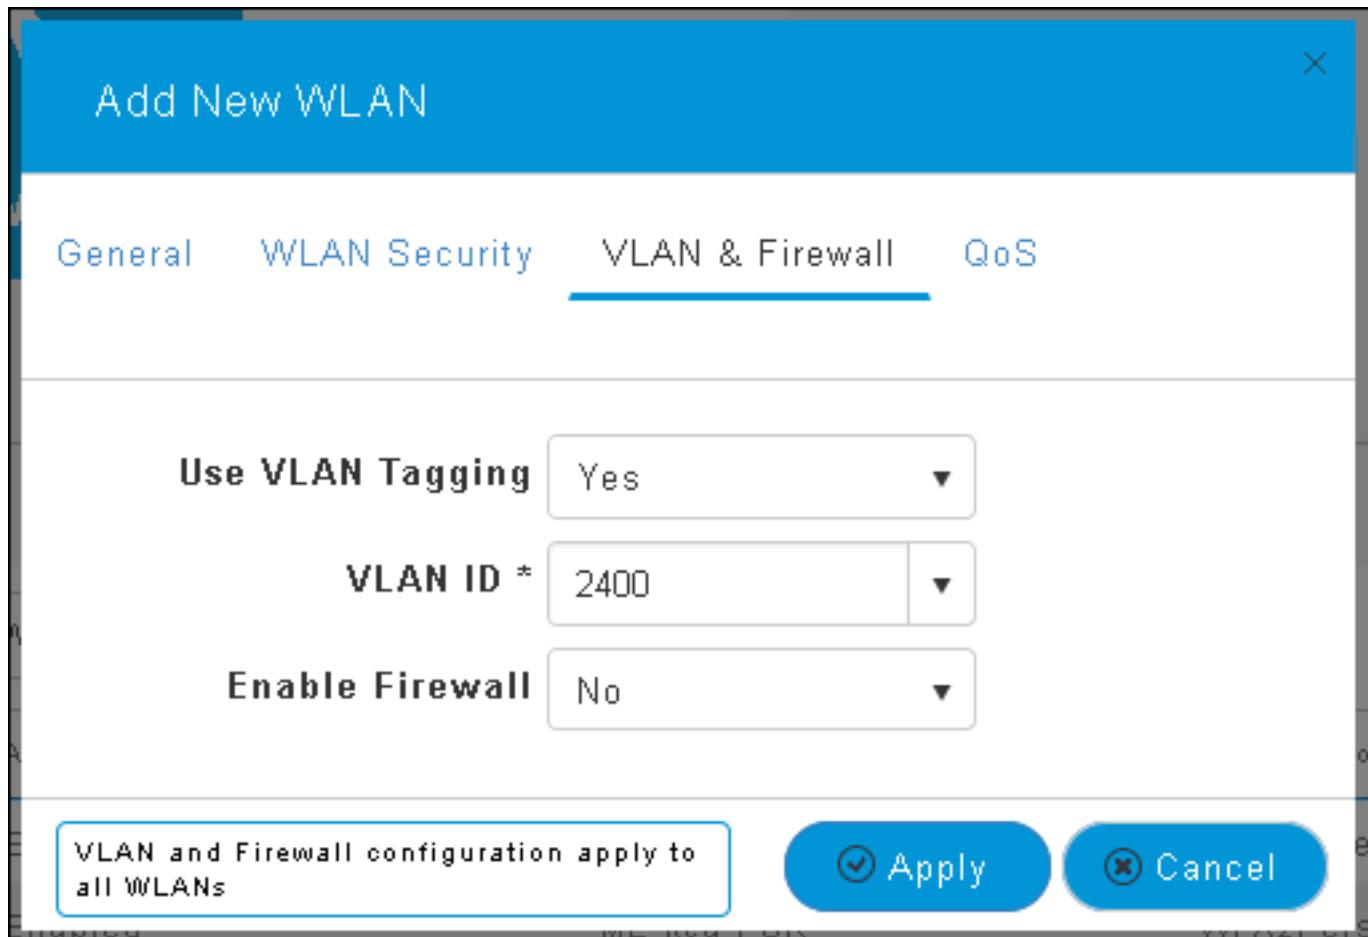

<a.b.c.d>对应于RADIUS服务器。

步骤4.为SSID分配VLAN。

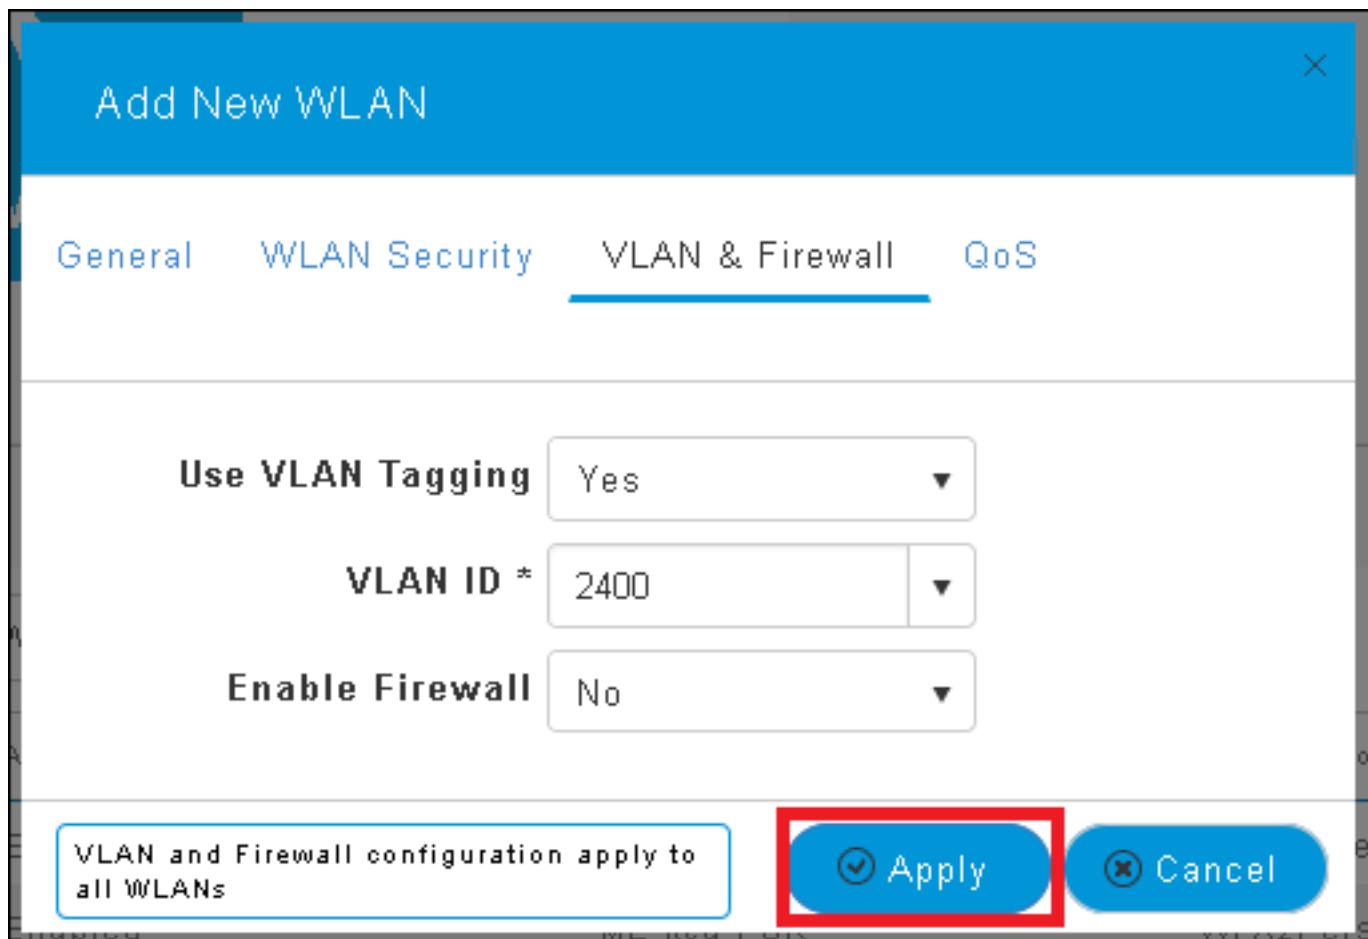

如果需要将SSID分配给AP的VLAN，可跳过此步骤。

要将此SSID的用户分配给特定VLAN（AP的VLAN除外），请启用**使用VLAN标记并分配所需的VLAN ID**。

注意：如果使用VLAN标记，请确保接入点所连接的交换机端口配置为中继端口，而AP VLAN配置为本征端口。

步骤5.单击“应用”完成配置。

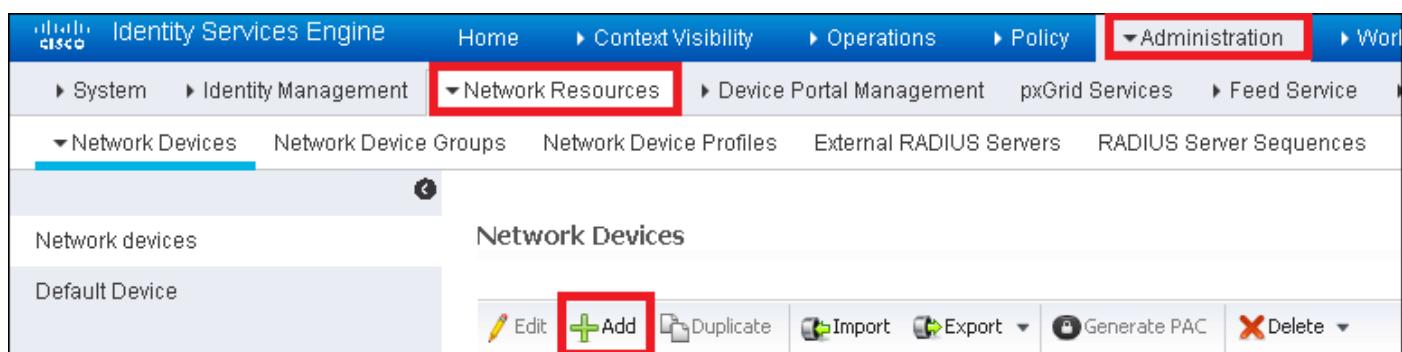

步骤6. 可选，将WLAN配置为接受VLAN覆盖。

在WLAN上启用AAA覆盖并添加所需的VLAN。为此，您需要打开到ME管理界面的CLI会话并发出以下命令：

```
>config wlan disable <wlan-id>
>config wlan aaa-override enable <wlan-id>
>config wlan enable <wlan-id>
>config flexconnect group default-flexgroup vlan add <vlan-id>
```

在ISE上声明ME

步骤1. 打开ISE控制台并导航至Administration > Network Resources > Network Devices > Add。

步骤2. 输入信息。

或者，可以根据设备类型、位置或WLC指定型号名称、软件版本、说明和分配网络设备组。

a.b.c.d对应于ME的IP地址。

Network Devices List > New Network Device

Network Devices

* Name: WLC-name

Description: optional description

* IP Address: a.b.c.d / 32

* Device Profile: Cisco

Model Name: wlc-model

Software Version: wlc-software

* Network Device Group

Device Type: WLCs-2504

Location: All Locations

WLCs: WLCs

RADIUS Authentication Settings

Enable Authentication Settings

Protocol: RADIUS

* Shared Secret:

Enable KeyWrap: *i*

* Key Encryption Key: Show

* Message Authenticator Code Key: Show

Key Input Format: ASCII HEXADECIMAL

CoA Port: 1700

Set To Default

[ISE — 网络设备组](#)

在ISE上创建新用户

步骤1. 导航至 管理>身份管理>身份>用户>添加。

The screenshot shows the Cisco Identity Services Engine (ISE) web interface. The top navigation bar includes links for Home, Context Visibility, Operations, Policy, Administration, System, Identity Management, Network Resources, Device Portal Management, and pxGrid. A red box highlights the 'Administration' link in the top right corner. Below the navigation, a secondary menu for 'System' is open, listing options like Deployment, Licensing, Certificates, Logging, Maintenance, Upgrade, Backup & Restore, Admin Access, and Settings. Another red box highlights the 'Identities' link under the 'Identity Management' section. The main content area is titled 'Network Access Users' and shows a table with columns for Status, Name, and Description. A red box highlights the 'Add' button in the toolbar above the table. The table displays the message 'Loading...'. On the left side, there's a sidebar with 'Users' selected and a link to 'Latest Manual Network Scan Res...'. The bottom right corner of the interface has a blue bar with the text 'Identity Management' and 'Identities'.

步骤2. 输入信息。

在本示例中，此用户属于名为ALL_ACCOUNTS的组，但可以根据需要对其进行调整。

Network Access Users List > New Network Access User

创建身份验证规则

身份验证规则用于验证用户的凭证是否正确（验证用户是否真正是其所说的用户），并限制允许其使用的身份验证方法。

步骤1：导航到策略>身份验证。

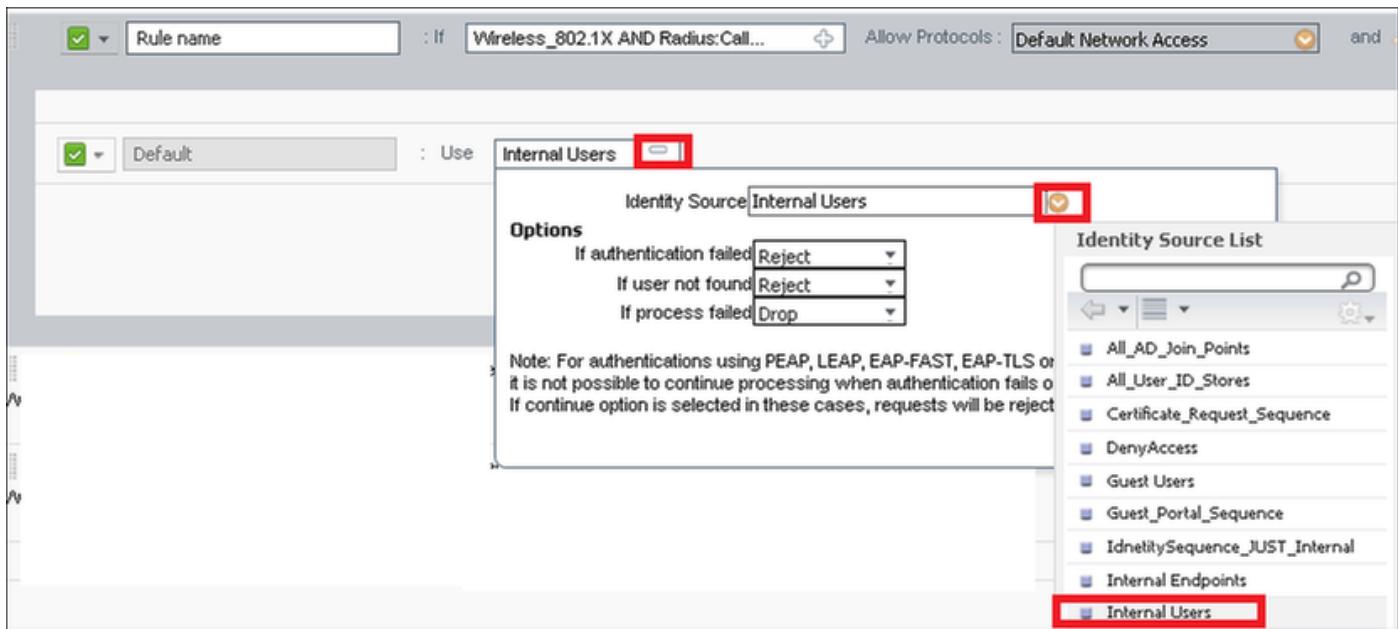

步骤2.插入新的身份验证规则。

要执行此操作，请导航至Policy > Authentication > Insert new row above/below。

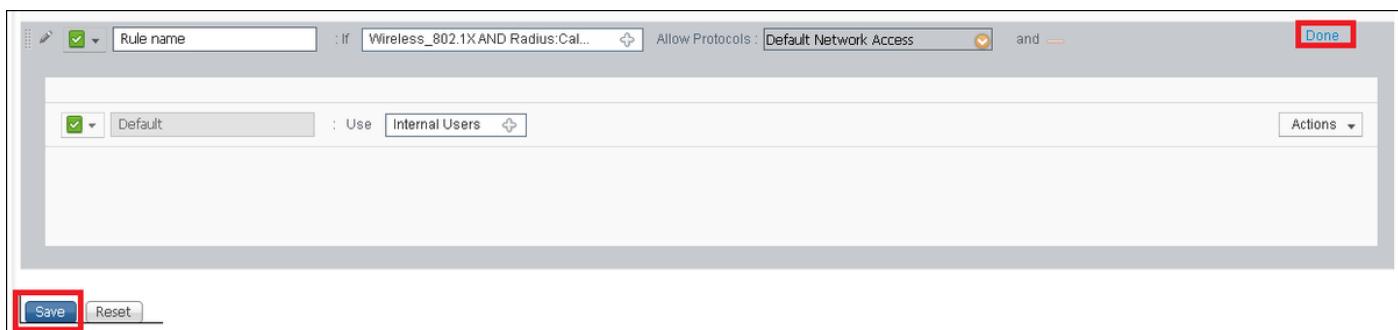

步骤3.输入所需信息

此身份验证规则示例允许在默认网络访问列表下列出的所有协议，这适用于无线802.1x客户端的身份验证请求和被叫站ID，并以`ise-ssid`结尾。

此外，为匹配此身份验证规则的客户端选择身份源(在本例中为内部用户)

完成后，单击“完成并保存”。

有关允许协议策略的详细信息，请参阅以下链接：

[允许的协议服务](#)

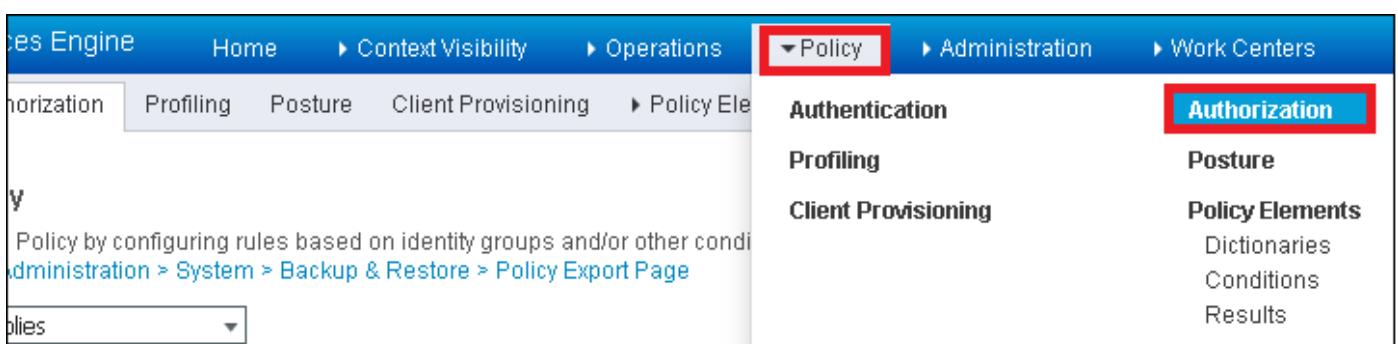

有关身份源的详细信息，请参阅以下链接：

[创建用户身份组](#)

[创建授权规则](#)

授权规则是确定是否允许客户端加入网络的负责规则

步骤1. 导航至 Policy > Authorization。

步骤2.插入新规则。导航至Policy > Authorization > Insert New Rule Above/Below。

The screenshot shows the Cisco Identity Services Engine (ISE) web interface. The top navigation bar includes links for Home, Context Visibility, Operations, Policy (which is highlighted with a red box), Administration, Work Centers, and License. Below the navigation is a secondary menu with tabs for Authentication, Authorization (also highlighted with a red box), Profiling, Posture, Client Provisioning, and Policy Elements. The main content area displays a list of policy rules under 'Conditions (identity groups and other conditions)' and 'Permissions'. A context menu is open on the right side of the screen, listing options: Insert New Rule Above (highlighted with a red box), Insert New Rule Below, Duplicate Above, and Duplicate Below.

步骤3.输入信息。

首先为规则和存储用户的身份组选择一个名称。在本示例中，用户存储在组ALL_ACCOUNTS中。

This screenshot shows the 'NameAuthZrule' rule being edited. The 'Rule Name' field is highlighted with a red box. In the 'Conditions' section, the 'Any' condition is selected. The 'User Identity Groups' dropdown is open, showing a list of groups: GuestType_Daily (default), GuestType_Weekly (default), GuestType_Contractor (default), and ALL_ACCOUNTS (default), which is highlighted with a red box. The 'Permissions' section is partially visible on the right.

之后，选择使授权过程符合此规则的其他条件。在本示例中，如果授权进程使用802.1x无线，并且称为站ID以ise-ssid结尾，则授权进程会符合此规则。

This screenshot shows the addition of a new condition to the 'NameAuthZrule'. The 'Conditions' section now includes a condition named 'Wireless_802.1X AND Radius:Call...' followed by a red box highlighting the 'Radius:Called-Station-ID' condition. This condition is defined as 'RadiusFlowType EQUALS Wireless802_1 AND Radius:Called-Station-ID Ends With ise-ssid'.

最后，选择允许客户端加入网络的授权配置文件，单击完成并保存。

The screenshot shows a network configuration interface for defining access rules. The rule is named "NameAuthZrule". It has the following conditions:

- If: AL... and Wireless_802.1X AND Radius:Call...

The "Permissions" section contains a "PermitAccess" entry, which is highlighted with a red box. This entry is part of a "Standard" profile, also highlighted with a red box. The "Standard" profile includes several other entries, one of which is "PermitAccess", also highlighted with a red box.

At the bottom left, there are "Save" and "Reset" buttons, both highlighted with red boxes. On the right side, there is a vertical column of "Edit" buttons for each item in the list.

或者，创建新的授权配置文件，将无线客户端分配到不同的VLAN:

The screenshot shows a configuration interface for creating a new standard profile. A "Standard" profile is currently selected, and its details are displayed. At the bottom right of the profile's configuration window, there is a button labeled "Add New Standard Profile", which is highlighted with a red box.

输入相关信息:

Add New Standard Profile

Authorization Profile

- * Name
- Description
- * Access Type

Network Device Profile

Service Template

Track Movement

Passive Identity Tracking

Common Tasks

- DACL Name
- ACL (Filter-ID)
- VLAN Tag ID ID/Name
- Voice Domain Permission

Advanced Attributes Settings

Select an Item =

Attributes Details

```
Access Type = ACCESS_ACCEPT
Tunnel-Private-Group-ID = 1:vlan-id
Tunnel-Type = 1:13
Tunnel-Medium-Type = 1:6
```

终端设备配置

配置Windows 10笔记本电脑，使其使用PEAP/MS-CHAPv2(质询握手身份验证协议第2版的Microsoft版本)连接到具有802.1x身份验证的SSID。

在此配置示例中，ISE使用其自签名证书执行身份验证。

要在Windows计算机上创建WLAN配置文件，有两个选项：

1. 在计算机上安装自签名证书以验证和信任ISE服务器以完成身份验证
2. 绕过RADIUS服务器的验证并信任用于执行身份验证的任何RADIUS服务器（不推荐，因为它可能会成为安全问题）

这些选项的配置在“[终端设备配置 — 创建WLAN配置文件 — 步骤7](#)”中进行了说明。

终端设备配置 — 安装ISE自签名证书

步骤1.从ISE导出自签名证书。

登录到ISE并导航至Administration > System > Certificates > System Certificates。

然后选择用于EAP身份验证的证书，然后单击导出。

The screenshot shows the Cisco Identity Services Engine (ISE) Administration interface. The navigation bar includes Home, Context Visibility, Operations, Policy, Administration (highlighted with a red box), and Work. Under Administration, there are sub-options like Deployment, Licensing, Certificates (highlighted with a red box), Logging, Maintenance, Upgrade, Backup & Restore, Admin Access, and Settings. The main content area is titled 'Certificate Management' with a sub-section 'System Certificates'. It displays a table with columns: Friendly Name, Used By, and Portal group tag. One row is selected, showing 'EAP-SelfSignedCertificate#EAP-SelfSignedCertificate#00001' under 'Used By' and 'EAP Authentication' under 'Portal group tag'. A red box highlights the 'Export' button in the toolbar above the table.

将证书保存到所需位置。此证书安装在Windows计算机上。

The dialog box is titled 'Export Certificate 'EAP-SelfSignedCertificate#EAP-SelfSignedCertificate#00001''. It contains two radio button options: 'Export Certificate Only' (selected and highlighted with a red box) and 'Export Certificate and Private Key'. Below these are two password input fields labeled '*Private Key Password' and '*Confirm Password'. A warning message at the bottom reads: 'Warning: Exporting a private key is not a secure operation. It could lead to possible exposure of the private key.' At the bottom right are 'Export' and 'Cancel' buttons, with 'Export' highlighted with a red box.

步骤2.在Windows计算机中安装证书。

将之前导出的证书复制到Windows计算机，将文件的扩展名从.pem更改为.crt，然后双击该文件并选择“安装证书.....”。

选择在本地计算机中安装它，然后单击下一步。

← Certificate Import Wizard

Welcome to the Certificate Import Wizard

This wizard helps you copy certificates, certificate trust lists, and certificate revocation lists from your disk to a certificate store.

A certificate, which is issued by a certification authority, is a confirmation of your identity and contains information used to protect data or to establish secure network connections. A certificate store is the system area where certificates are kept.

Store Location

- Current User
 Local Machine

To continue, click Next.

Next

Cancel

选择Place all certificates in the following store，然后浏览并选择Trusted Root Certification Authorities(受信任的根证书颁发机构)。然后单击“下一步”。

← Certificate Import Wizard

Certificate Store

Certificate stores are system areas where certificates are kept.

Windows can automatically select a certificate store, or you can specify a location for the certificate.

- Automatically select the certificate store based on the type of certificate
- Place all certificates in the following store

Certificate store:

Trusted Root Certification Authorities

[Browse...](#)

[Next](#)

[Cancel](#)

然后单击 Finish。

X

←  Certificate Import Wizard

Completing the Certificate Import Wizard

The certificate will be imported after you click Finish.

You have specified the following settings:

Certificate Store Selected by User	Trusted Root Certification Authorities
Content	Certificate

Finish

Cancel

最后单击“**Yes (是)**”确认证书的安装。

Security Warning

You are about to install a certificate from a certification authority (CA) claiming to represent:

EAP-SelfSignedCertificate

Windows cannot validate that the certificate is actually from "EAP-SelfSignedCertificate". You should confirm its origin by contacting "EAP-SelfSignedCertificate". The following number will assist you in this process:

Thumbprint (sha1): C1C4A1D0D1A0C551D32C1F2B3475821E
... 1234567890

Warning:

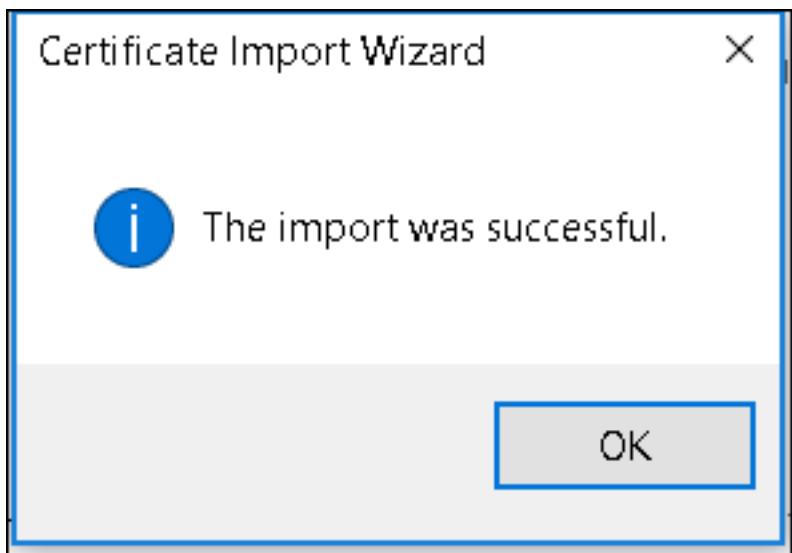

If you install this root certificate, Windows will automatically trust any certificate issued by this CA. Installing a certificate with an unconfirmed thumbprint is a security risk. If you click "Yes" you acknowledge this risk.

Do you want to install this certificate?

Yes

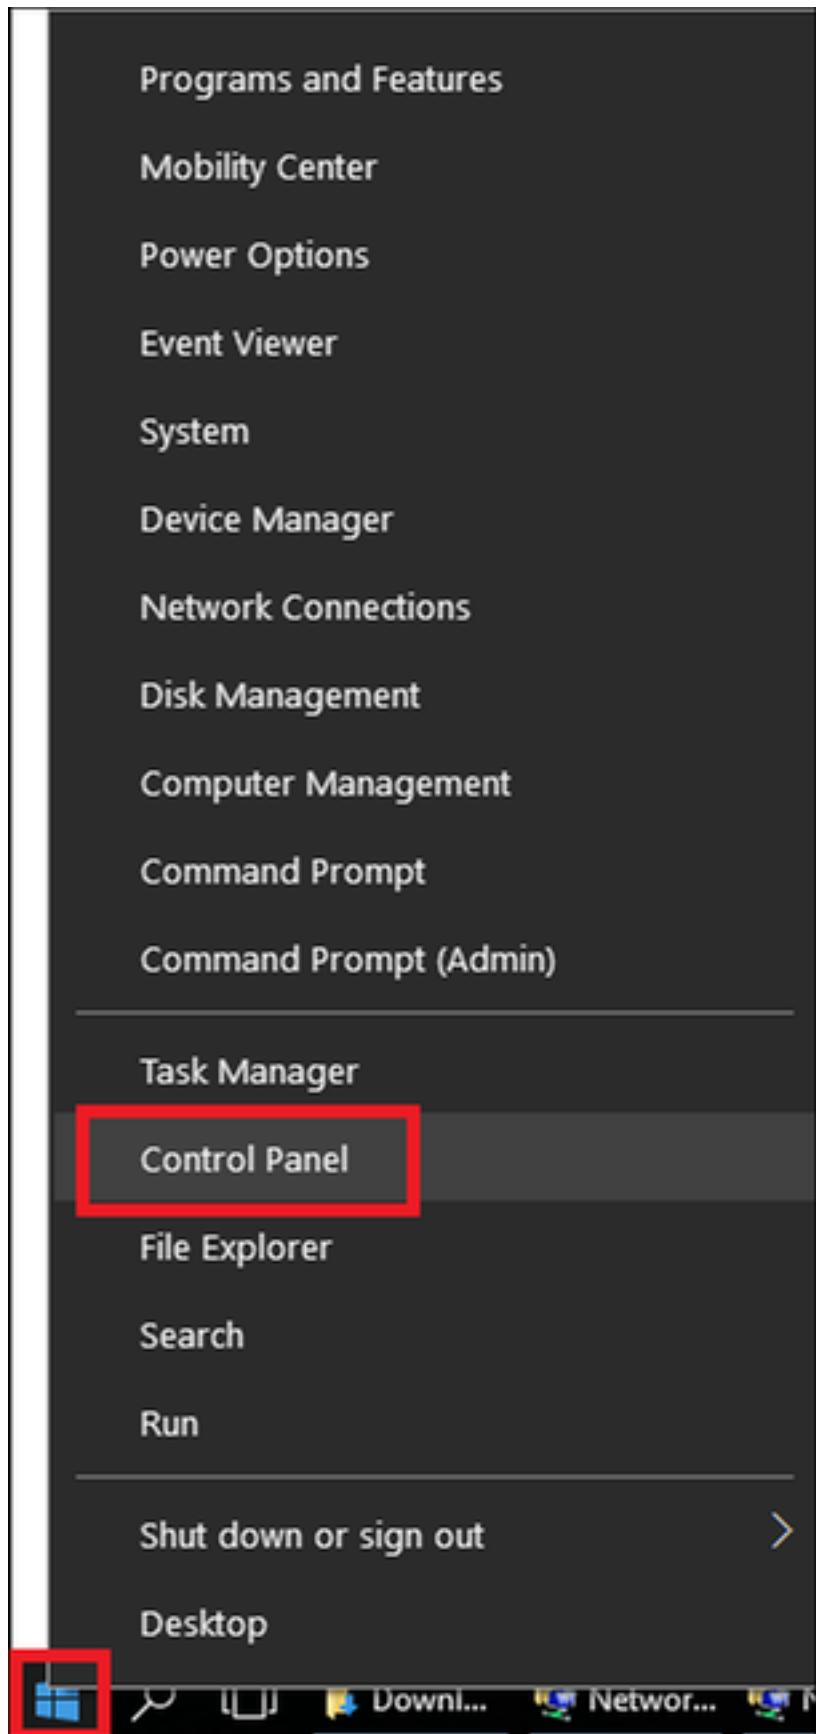

No

最后单击OK。

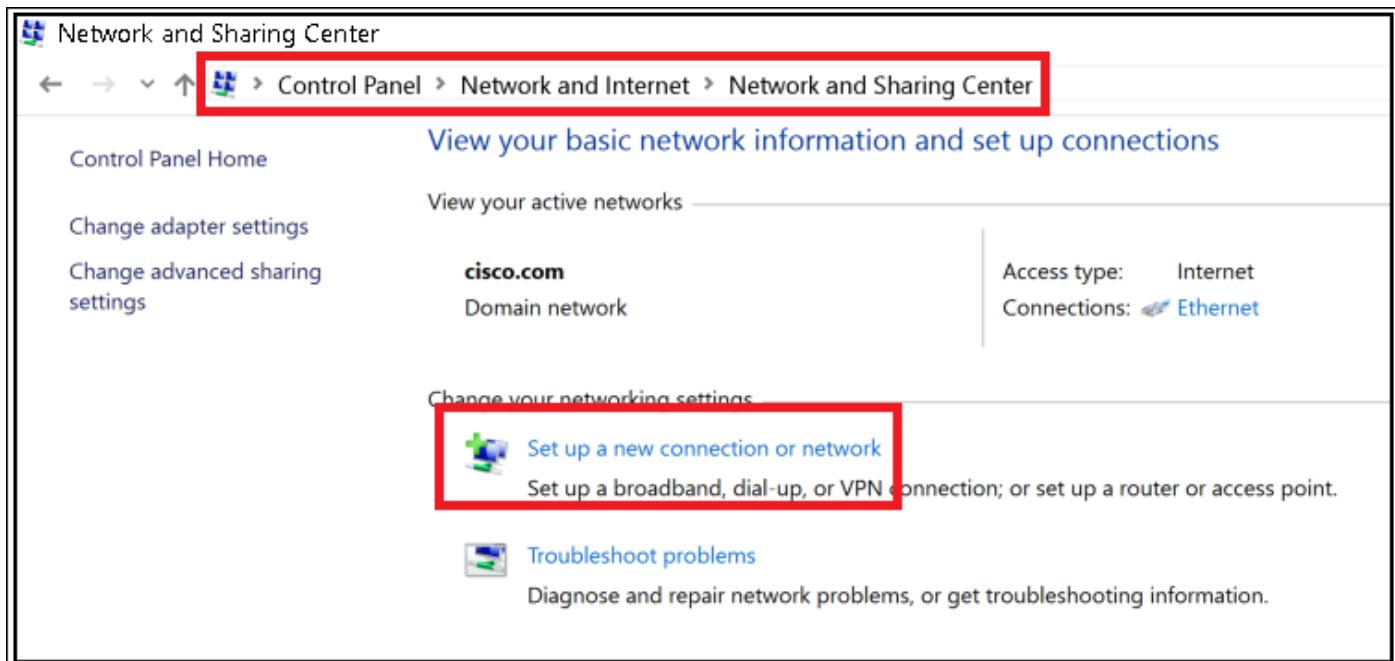

终端设备配置 — 创建WLAN配置文件

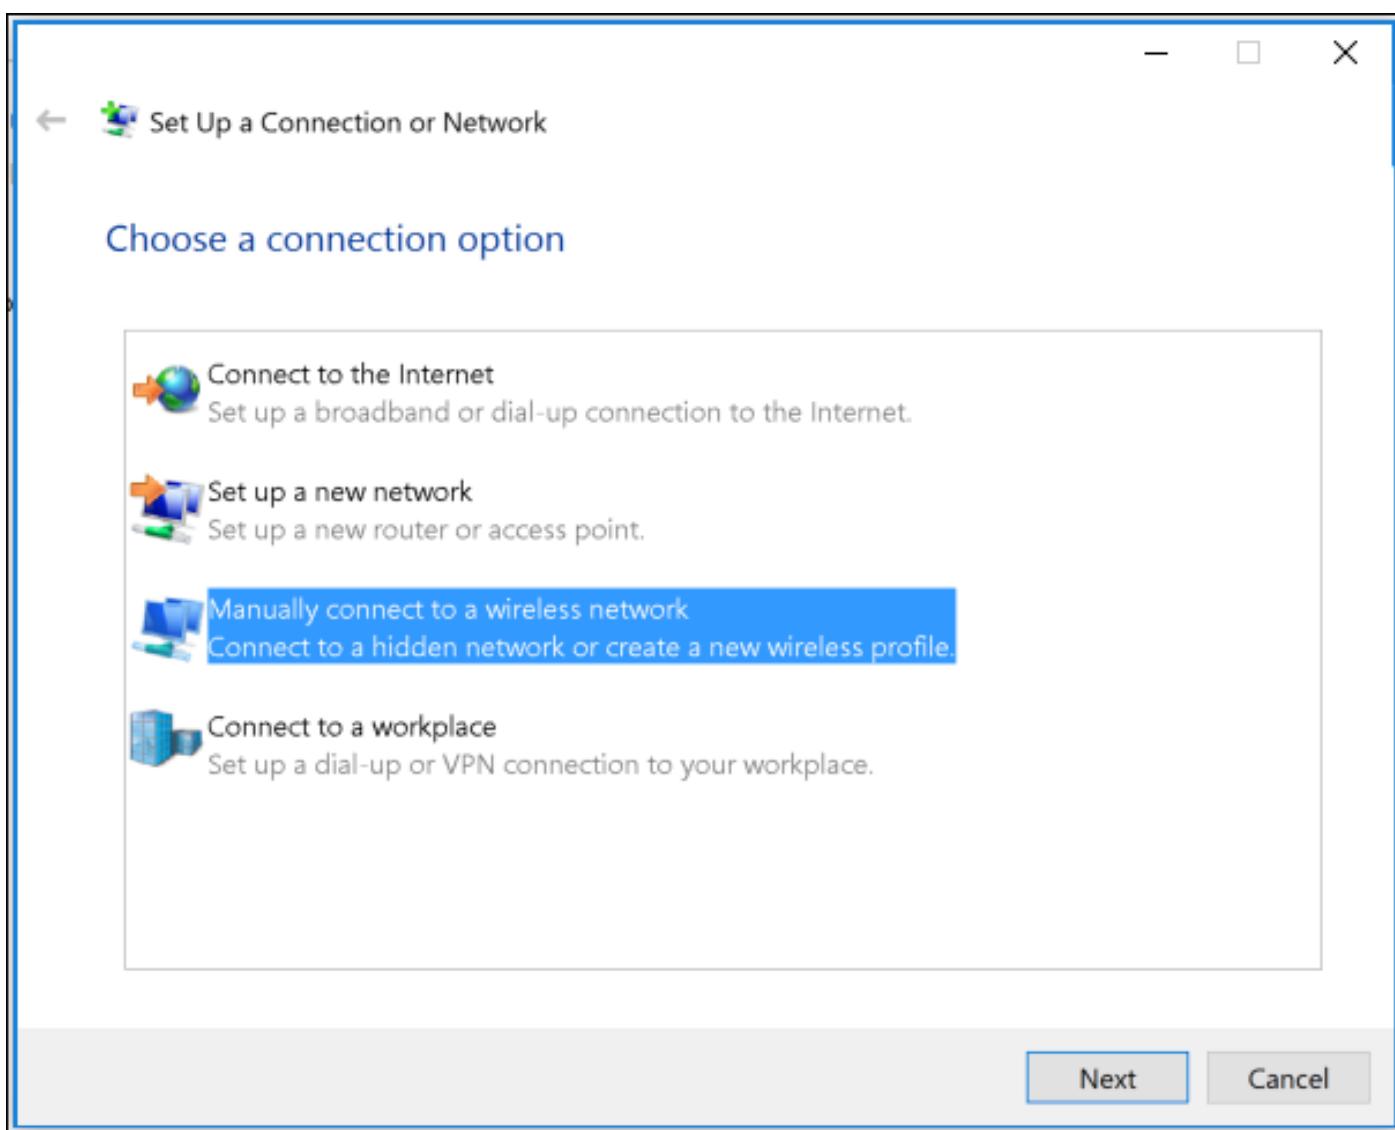

步骤1. 右键单击“开始”图标并选择“控制面板”。

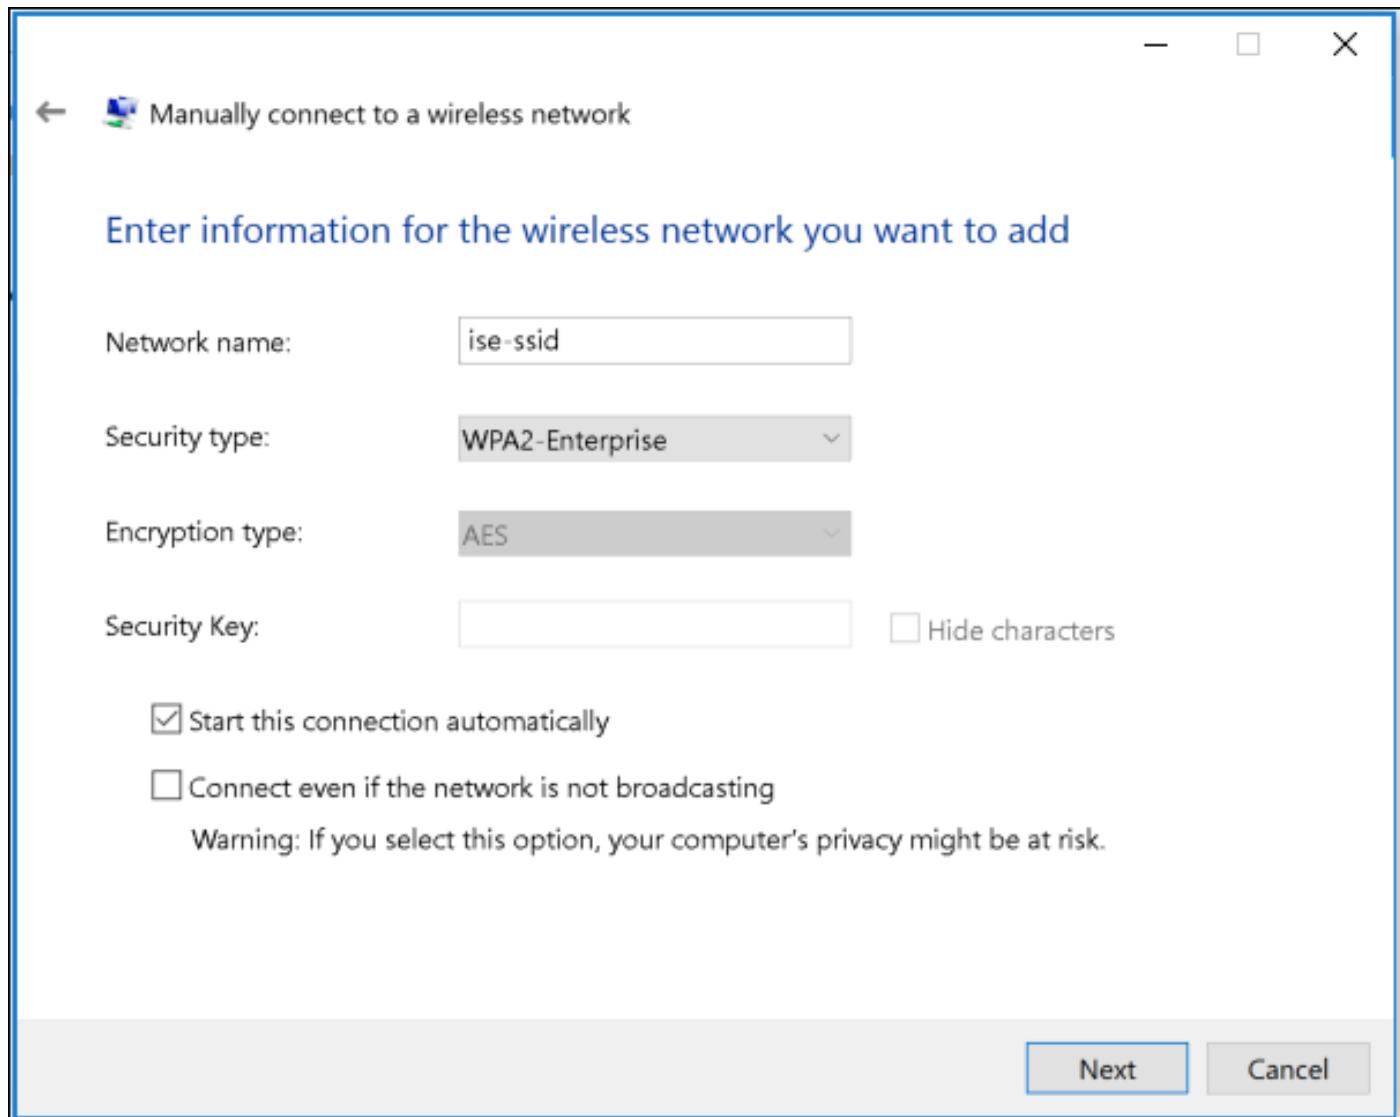

步骤2. 导航到Network and Internet(网络和Internet)，然后导航到Network and Sharing Center(网络和共享中心),然后单击Set up a new connection or network (设置新连接或网络)。

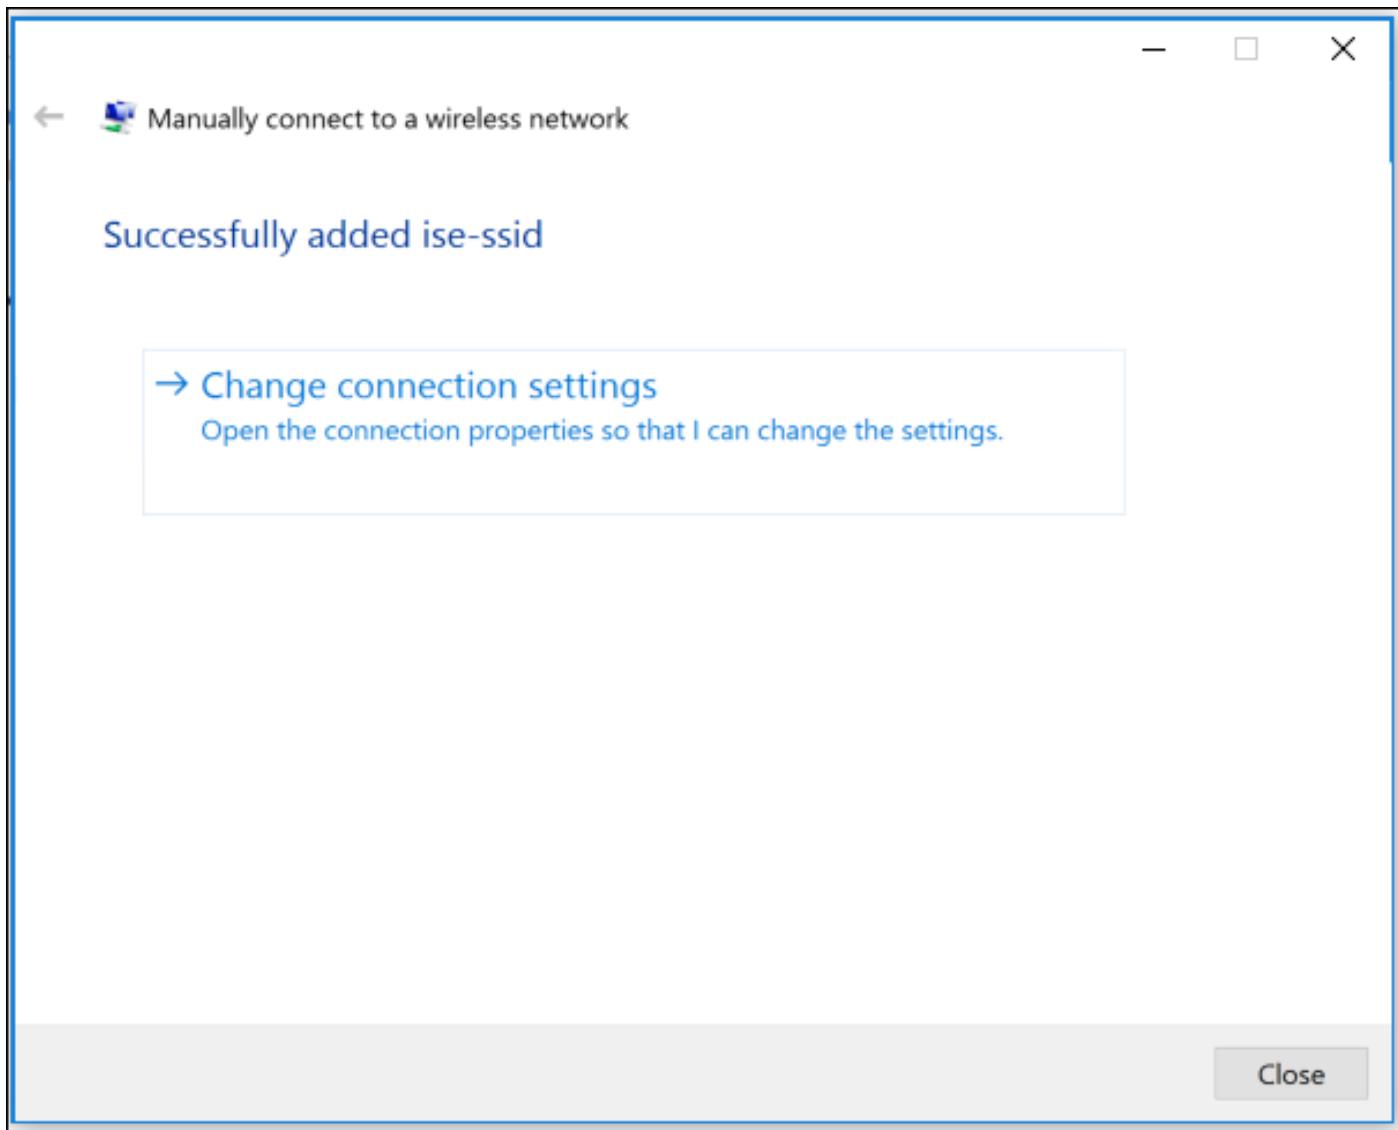

步骤3.选择“手动连接到无线网络”，然后单击“下一步”。

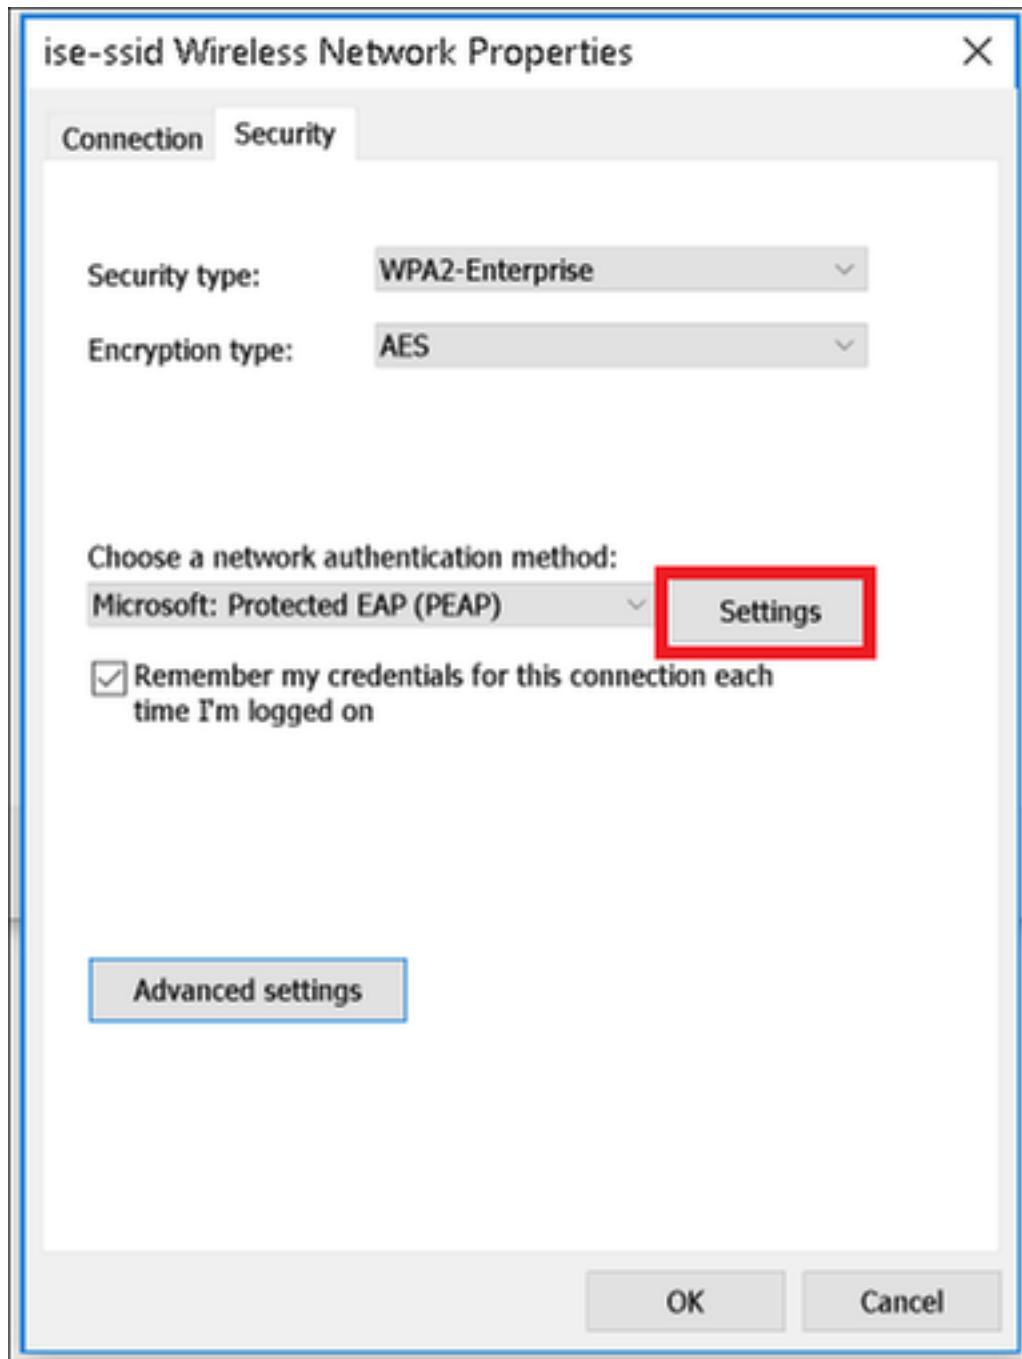

步骤4.输入名称为SSID的信息，并输入安全类型WPA2-Enterprise，然后单击**Next**。

步骤5.选择“更改连接设置”以自定义WLAN配置文件的配置。

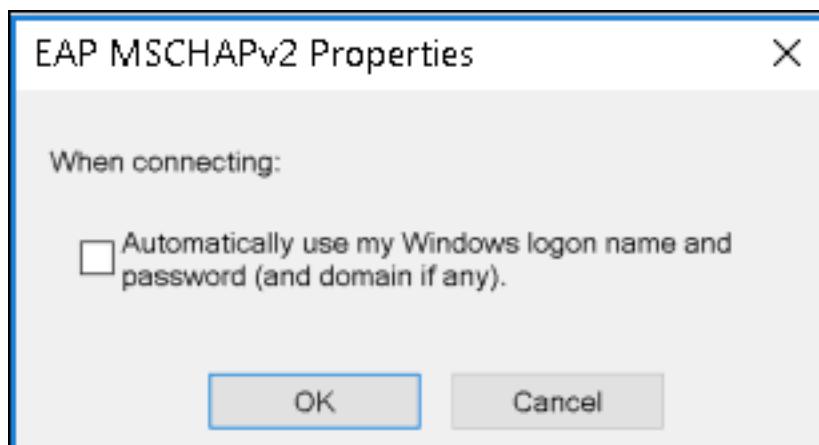

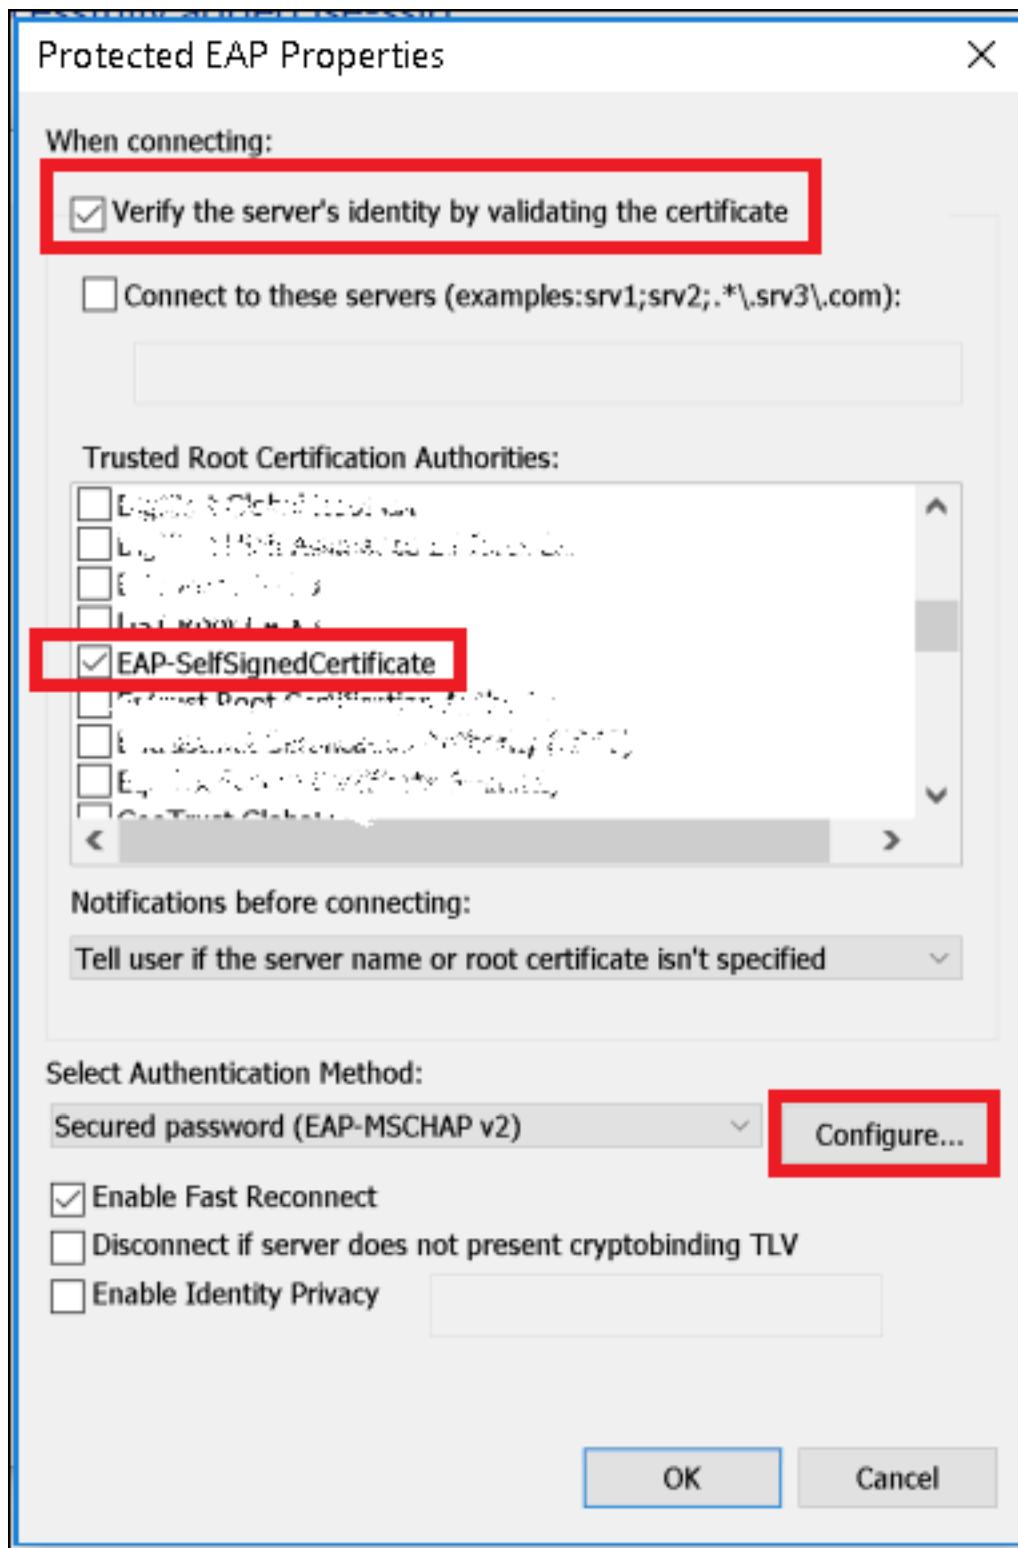

步骤6.导航至“安全”选项卡并单击“设置”。

步骤7.选择是否验证RADIUS服务器。

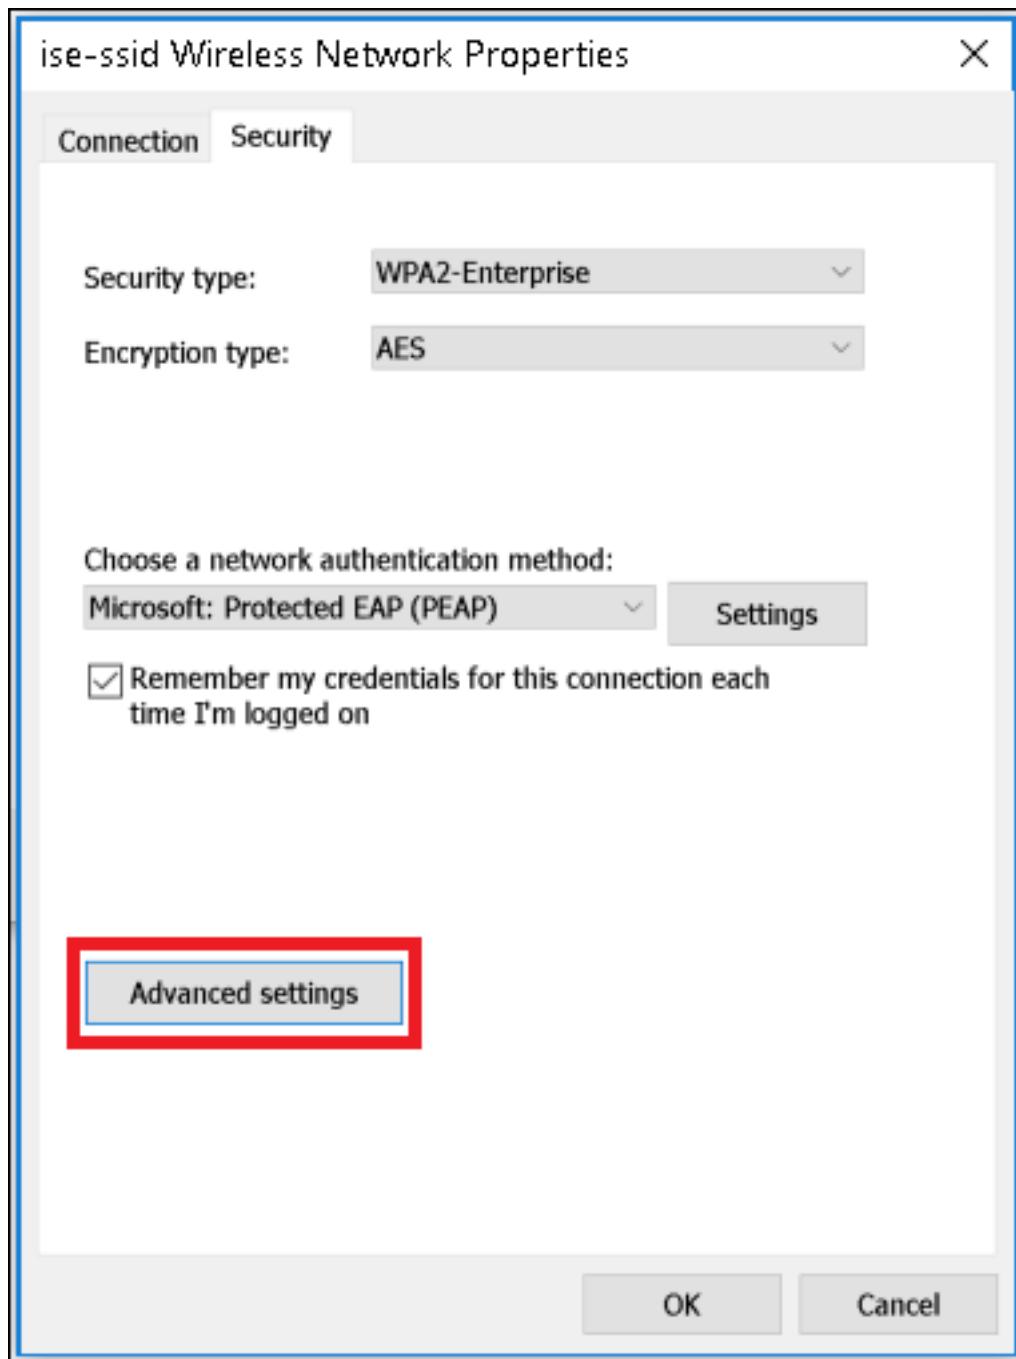

如果是，请启用**Verify the server identity by validating the certificate and from Trusted Root Certification Authorities: list self the self-signed certificate of ISE.**

之后，选择配置并禁用自动使用我的Windows登录名和密码……，然后单击确定

步骤8.配置用户凭证

返回安全选项卡后，选择高级设置，将身份验证模式指定为用户身份验证并保存在ISE上配置的凭证以对用户进行身份验证。

Advanced settings

X

要方便地读取调试客户端输出，请使用无线调试分析器工具：

无线调试分析器

ISE上的身份验证过程

导航至操作> RADIUS >实时日志，以查看分配给用户的身份验证策略、授权策略和授权配置文件。

The screenshot shows the ISE Operations dashboard with the following details:

- Header:** Identity Services Engine, Home, Context Visibility, Operations (highlighted), Policy, Administration, Work Centers, License.
- Sub-Header:** RADIUS, TC-NAC Live Logs, TACACS Reports, Troubleshoot, Adaptive Network Control.
- Section:** Live Logs (highlighted).
- Metrics:**
 - Misconfigured Suplicants: 0
 - Misconfigured Network Devices: 0
 - RADIUS Drops: 0
 - Client Stopped Responding: 4
- Buttons:** Refresh, Reset Repeat Counts, Export To.
- Table Headers:** Time, Status, Details, Identifier, Endpoint ID, Endpoint Name, Authentication Policy, Authorization Policy, Authorization Profiles.
- Table Data:** A single row for user1 at 08:74:02:77:13:45, Apple-Device, with policies Default >> Rule name >> Default and Default >> NameAuthZrule, and profile PermitAccess.

有关详细信息，请单击Details查看更详细的身份验证过程。
